FoCoCo Prime Tier: Expert Interviews/Tips - Technical & Content Specification

Feature Name: AI-Curated Aural Confidence Expert Insights

VARK Modality: Aural (A)

Pillar: Confidence (specifically for external validation, diverse perspectives, and learning from authoritative sources)

Description: A Prime-tier feature providing short, impactful audio snippets of renowned sports psychologists, mental coaches, or professional golfers discussing practical confidence-building strategies. Designed for Aural learners, these bite-sized expert insights offer valuable external perspectives, actionable tips, and motivational wisdom in an easily digestible audio format, helping users internalize proven methods for building self-belief.

I. Core Logic & AI Integration:

- **Audio Content Library (Pre-recorded by Experts):** A curated library of short (typically 1-3 minutes) audio clips featuring actual experts.
 - **Expert Sourcing:** This requires securing content from or licensing recordings of reputable sports psychologists, golf mental coaches, and perhaps even interviews with pro golfers known for their mental game.
 - **Content Themes:** Each snippet focuses on a specific aspect of confidence:
 - Pre-round jitters management
 - Bouncing back from a bad shot

- Developing a "go-to" shot with confidence
- Trusting your swing
- Accepting outcomes
- The role of body language in confidence
- Dealing with pressure
- **Categorization/Tagging:** Each audio clip is tagged with keywords related to its topic, confidence aspect, and speaker for AI sorting.
- **AI Curation & Recommendation Engine:**
 - The AI selects the most relevant expert audio clips based on various user data points:
 - **User's VARK Profile (Aural):** Prioritizes audio content.
 - **Mindset Ratings:** If the user logs "Low Confidence," "Anxious," "Frustrated," or "Self-Doubt," the AI recommends clips addressing these specific challenges (e.g., a clip on "dealing with pressure" if anxiety is logged).
 - **Performance Data:** If the AI identifies recurring struggles (e.g., 3-putting, poor tee shots), it can suggest expert tips related to building confidence in those specific areas.
 - **Journal Entries/Focus Logs:** User's reflections or questions about confidence or mental game challenges can trigger relevant expert advice.
 - **AI's Trend Engine:** Recognizes persistent patterns of confidence issues and recommends a series of expert insights over time to address them.
- **Contextual Triggering:**
 - **Dedicated "Expert Insights" Library:** A prominent, browsable section within the Coach tab.
 - **Post-Round Debrief:** After a round, the AI can recommend a specific expert clip based on the user's performance or logged mindset.
 - **Pre-Round Warm-up:** Suggests a short expert clip to listen to for mental preparation, perhaps related to confidence for the first tee or a tricky hole.

- **AI-Prompted Nudges:** "Feeling the pressure before that tricky par 3? Listen to Dr. [Expert Name]'s tip on embracing the challenge." (Pushed notification with direct link to audio).
- **User-Initiated:** Users can access the library anytime they seek external wisdom.

II. Content/Display Elements (Aural Emphasis):

1. Audio Player Interface:

- **Play/Pause/Skip Forward/Back (e.g., 10-15s):** Standard audio player controls.
- **Clip Title:** (e.g., "Dr. Smith: Bouncing Back from a Bad Shot").
- **Expert Name & Affiliation:** Clearly display who is speaking.
- **Short Description:** A one-sentence summary of the clip's content.
- **Progress Bar:** Visual indication of the clip's duration and current playback position.
- **Playback Speed Control:** (Optional) Allows users to adjust speed (e.g., 0.75x, 1x, 1.25x).
- **Background Play:** Audio should continue playing even if the user navigates away from the screen or locks their device.

2. Expert Library View:

- A list of all available expert audio clips, filterable by expert, topic, or confidence area.
- **"Favorite" Functionality:** Allows users to bookmark clips they find particularly helpful.
- **AI Recommended Section:** A dedicated section displaying clips specifically recommended by the AI for the user.

3. AI Rationale Display: When the AI suggests an expert clip, a brief textual explanation appears (or is optionally narrated) to explain *why* it's recommended based on user data.

- **Example:** "Your recent mindset logs show some self-doubt. Dr. [Expert]'s insights on building self-trust might be helpful."

III. UI/UX Considerations:

- **High Audio Quality:** Crucial for Aural learners; ensure clear, professional recordings.
- **Accessibility:** Easy to find and play clips, even with minimal interaction.
- **Headphone Recommendation:** Suggest using headphones for an optimal and private listening experience.
- **Discreet Delivery:** For in-round nudges, audio should be subtle (e.g., headphone-only, low volume) to avoid distraction or disturbing others.
- **Offline Access:** Allow users to download clips for offline listening.
- **Regular Content Updates:** Periodically add new expert interviews/tips to keep the content fresh and relevant.
- **Feedback Loop:** Simple "Thumbs Up/Down" or "Did this help?" prompt after listening to a clip, helping the AI refine future recommendations.
- **Conciseness:** Emphasize short, digestible clips over long lectures, respecting a golfer's limited time.
