FoCoCo Prime Tier: Guided Relaxation for Performance Anxiety - Technical & Content Specification

Feature Name: AI-Guided Aural Relaxation for Golf Performance Anxiety

VARK Modality: Aural (A)

Pillar: Confidence (specifically for stress reduction, emotional regulation, pre-performance calm, and enhancing flow state)

Description: A Prime-tier feature providing AI-guided audio relaxation sessions specifically designed to reduce golf performance anxiety and cultivate a calm, confident state. Designed for Aural learners, these sessions utilize verbal cues, breathing exercises, and soothing soundscapes to help users manage stress, achieve mental tranquility, and transition into an optimal state for confident play.

I. Core Logic & AI Integration:

- **Audio Session Library:** A comprehensive library of professionally narrated (or high-quality AI TTS voice) audio scripts for various relaxation techniques.
 - **Techniques Covered:**
 - **Deep Breathing Exercises:** Guided inhalation and exhalation patterns (e.g., box breathing, 4-7-8 breathing).
 - **Progressive Muscle Relaxation (PMR):** Guiding users to tense and then relax different muscle groups.
 - **Body Scan Meditation:** Directing attention to different parts of the body to notice and release tension.

- **Guided Imagery/Visualization:** (With an Aural focus) Guiding users to *imagine* calm, peaceful golf scenarios (e.g., walking a perfect fairway, sinking a putt effortlessly), with auditory descriptions emphasized.
 - **Mindfulness for Golfers:** Brief sessions on present-moment awareness on the course.
- **Session Lengths:** Varying lengths from short (2-5 minutes for quick resets) to medium (10-15 minutes for deeper relaxation).
- **Background Soundscapes:** Paired with calming ambient sounds (nature sounds like gentle rain, ocean waves, birdsong, or subtle, non-distracting instrumental music).
- **AI Narration Engine (TTS/Pre-recorded):** Utilizes a calm, soothing, and trustworthy voice. Consistency in voice quality is essential for a therapeutic experience.
- **Data Sources (Prime Tier Only):**
 - **User's VARK Profile (Aural):** Prioritizes listening exercises.
 - **Mindset Ratings:** Frequent "Anxious," "Stressed," "Nervous," or "Pressure" logs are primary triggers for recommending relaxation sessions.
 - **Performance Data:** If the AI identifies performance degradation under pressure (e.g., higher scores on challenging holes, increased errant shots in clutch moments), it will suggest anxiety-reducing sessions.
 - **Journal Entries/Focus Logs:** User's self-reported feelings of tension, worry, or inability to relax before/during rounds.
 - **Conversational AI Interactions:** If the user discusses anxiety or nervousness during a chat.
 - **AI's Trend Engine:** Recognizes patterns of recurring performance anxiety and recommends specific techniques over time.
- **AI Session Curation & Personalization:**
 - The AI recommends specific relaxation sessions based on the user's identified anxiety triggers and preferred session lengths.
 - **Recommendation Logic:**
 - If a user experiences pre-round jitters: Recommend a 5-minute "Calm Breathing" session.

- If they struggle with tension during play: Suggest a "Progressive Muscle Relaxation" for quick physical release.
 - If they express feeling overwhelmed by pressure: Suggest a "Mindfulness for Pressure" session.
 - The AI can verbally introduce the session with a personalized rationale (e.g., "To help you manage those pre-round nerves, try this guided breathing session.").
- **Contextual Triggering:**
 - **Dedicated "Relaxation" or "Anxiety Relief" Library:** A prominent section within the **Coach** tab.
 - **Pre-Round Warm-up:** Suggested as an optional mental preparation step, especially when playing a challenging course or competitive round.
 - **Post-Round Debrief:** If anxiety was present during the round, the AI suggests relevant sessions for future rounds.
 - **AI-Prompted Nudges:** "Feeling some tension before your round? This 5-minute guided relaxation can help you find your calm and confidence." (Pushed notification).
 - **User-Initiated:** Users can access the sessions anytime they feel stressed or anxious.

II. Content/Display Elements (Aural Emphasis):

1. Audio Player Interface:

- **Play/Pause/Skip Forward/Back (e.g., 15-30s):** Standard audio player controls.
- **Session Title:** (e.g., "Deep Breathing for Pre-Round Calm," "Progressive Muscle Relaxation for Focus").
- **Session Progress Bar & Duration:** Visual indication of length and current position.
- **Background Soundscapes:** Controls for adjusting the balance between narration and background sounds.
- **Minimal Visuals:** The screen should be clean and calming (e.g., a serene golf landscape, abstract color gradient, or a solid calming color), avoiding any distracting elements. Text display is minimal, focusing on instructions or key takeaways *after* the guided portion.

2. Session Library View:

- List of available relaxation sessions with titles, brief descriptions, and durations.
- Ability to **"Favorite"** sessions for quick access.
- Filter by technique (e.g., "Breathing," "PMR," "Imagery") or by need (e.g., "Quick Reset," "Deep Calm").

3. AI Rationale Display: When the AI suggests a session, a brief textual explanation (or narrated intro) to explain *why* it's recommended based on user data.

- **Example:** "Your recent data shows increased tension around high-pressure putts. This session can help you relax and trust your stroke."

III. UI/UX Considerations:

- **High Audio Quality:** Crucial for Aural learners; ensure clear narration and high-quality, soothing background soundscapes.
- **Calm & Consistent Tone:** The guiding voice must be calming, empathetic, and unwavering throughout the session.
- **Background Play:** Audio should continue playing even if the user navigates away or locks their device
- **Headphone Recommendation:** Strongly recommend headphones for optimal immersion and privacy, especially crucial for relaxation
- **Clear Instructions:** Narration should be easy to follow with appropriate pacing and pauses.
- **Offline Access:** Allow users to download sessions for offline use.
- **Feedback Loop:** Simple "How do you feel after this session?" (e.g., scale of 1-5, or "More Relaxed/Less Anxious") prompt at the end to gauge effectiveness and refine future recommendations.
- **Integration with Other Features:** Link to Mindset Tracking (to log post-session feeling) or Pre-Round Prep (to apply calm state).
