FoCoCo Prime Tier: Guided Self-Talk Sessions - Technical & Content Specification

Feature Name: AI-Guided Aural Confidence Self-Talk Sessions

VARK Modality: Aural (A)

Pillar: Confidence (specifically for developing positive internal dialogue, reframing thoughts, and cultivating mental resilience)

Description: A Prime-tier feature offering longer, AI-narrated audio exercises that coach Aural learners on developing and utilizing effective internal dialogue to boost confidence. These guided sessions provide techniques for challenging negative thoughts, replacing them with constructive self-talk, and building a resilient mental framework, empowering users to actively manage their inner voice for greater self-belief on and off the course.

I. Core Logic & AI Integration:

- **Self-Talk Technique Library (Audio Scripts):** A comprehensive library of structured audio scripts (narrated by the AI TTS voice) for various self-talk techniques.
 - **Techniques Covered:**
 - **Positive Affirmation Practice:** (Expands on basic affirmations) How to personalize and internalize them.
 - **Thought Reframing:** Guiding users to identify negative thoughts and consciously rephrase them (e.g., "I always miss this putt" to "I have a chance to make this putt").

- **Process-Oriented Self-Talk:** Shifting focus from outcome to execution ("Focus on your target," "Smooth swing").
 - **Resilience & Acceptance Self-Talk:** Guidance on accepting mistakes and moving on ("It's just one shot," "I learn from every experience").
 - **Confident Identity Self-Talk:** Reinforcing personal strengths ("I am a strong driver," "I am a clutch putter").
- **Session Lengths:** Sessions typically range from 2-10 minutes, allowing for more in-depth guidance than short affirmations.
- **AI Narration Engine (TTS):** The AI utilizes high-quality Text-to-Speech (TTS) to deliver the guided sessions. Voice should be calm, encouraging, and clear.
- **Data Sources (Prime Tier Only):**
 - **User's VARK Profile (Aural):** Prioritizes verbal instruction and listening exercises.
 - **Mindset Ratings:** Frequent "Self-Doubt," "Anxious," "Frustrated," or "Negative Self-Talk" logs will trigger recommendations for specific self-talk sessions.
 - **Journal Entries/Focus Logs:** If users describe recurring negative thoughts or internal criticisms, the AI suggests sessions tailored to those patterns.
 - **Performance Data:** If the AI identifies performance dips linked to mental errors (e.g., rushing, overthinking), it can suggest self-talk sessions focusing on process or composure.
 - **AI's Trend Engine:** Recognizes persistent patterns of negative internal dialogue and recommends targeted interventions.
- **AI Session Curation & Personalization:**
 - The AI recommends specific self-talk sessions based on the user's identified confidence challenges and learning style.
 - **Personalization Logic:**
 - If a user struggles with putting confidence, recommend a session on "Positive Putting Self-Talk: Trusting Your Read."
 - If they tend to criticize themselves after a poor shot, suggest "Reframing Negative Thoughts: Moving On."

- AI can dynamically insert personal examples or reference recent rounds if appropriate within the session script.
- **Contextual Triggering:**
 - **Dedicated "Self-Talk" Library:** A prominent section within the Coach tab.
 - **Pre-Round Preparation:** Suggested as part of a mental warm-up, especially for users with pre-round jitters.
 - **Post-Round Debrief:** AI recommends specific sessions based on confidence analysis from the round.
 - **AI-Prompted Nudges:** "Noticed some self-criticism in your last round. Try the 'Reframing Negative Thoughts' session to build more constructive internal dialogue." (Pushed notification).
 - **User-Initiated:** Users can access the library anytime they feel the need to work on their internal dialogue.

II. Content/Display Elements (Aural Emphasis):

1. Audio Player Interface:

- **Play/Pause/Skip Forward/Back (e.g., 10-15s):** Standard audio player controls.
- **Session Title:** (e.g., "Positive Self-Talk for On-Course Resilience," "The Power of 'Next Shot' Thinking").
- **Session Progress Bar:** Clearly indicates how far into the session the user is.
- **Session Duration:** Display total time (e.g., "5:30").
- **Background Music (Optional):** Calming, subtle instrumental music that fades when the AI speaks. Must be non-distracting.
- **Transcript Display (Optional):** The audio script can be displayed on-screen, allowing users to follow along visually if they prefer (beneficial for mixed learners).

2. Session Library View:

- List of available self-talk sessions with titles and brief descriptions.
- Ability to "Favorite" sessions for quick access.

- Filter by confidence challenge (e.g., "Negative Thoughts," "Pressure Moments," "Building Belief").
3. **AI Rationale Display:** When the AI suggests a session, a brief textual explanation (or narrated intro) to explain *why* it's recommended based on user data.
- **Example:** "Based on your recent tendencies to overthink before putts, this session will help you cultivate trusting self-talk for your short game."

III. UI/UX Considerations:

- **Accessibility:** Easy to find and play sessions, especially when driving or walking.
- **Background Play:** Audio should continue playing even if the user navigates away or locks their device.
- **Volume Control:** Standard volume controls.
- **Headphone Recommendation:** Suggest using headphones for an optimal and private experience.
- **Structured Breaks:** Sessions should include pauses for the user to practice the self-talk internally.
- **Repetition Encouragement:** Remind users that consistency is key for self-talk techniques to become habitual.
- **Offline Access:** Allow users to download sessions for offline use.
- **AI Voice Quality:** Critical for guided sessions; ensure a professional, calming, and natural TTS voice.
- **Feedback Loop:** Simple "Thumbs Up/Down" or "Did this help?" prompt after completing a session.
