FoCoCo Prime Tier: Verbalization Practice - Technical & Content Specification

Feature Name: AI-Guided Aural Verbalization Practice for Confidence

VARK Modality: Aural (A)

Pillar: Confidence (specifically for solidifying intentions, reinforcing positive beliefs, and committing to execution)

Description: A Prime-tier feature offering AI-guided audio prompts that encourage Aural learners to verbally state their intentions or visualize positive outcomes aloud before a shot. This practice helps to solidify commitment, build conviction, and integrate positive affirmations through the act of speaking, translating mental confidence into verbalized action.

I. Core Logic & AI Integration:

- **Verbalization Script Library:** A comprehensive library of concise, action-oriented verbalization prompts. These are short phrases or sentences designed for users to repeat aloud.
 - **Categories:**
 - **Intention Setting:** Focusing on the *what* and *how* of the shot (e.g., "Smooth tempo to the target," "Controlled fade over the bunker").
 - **Outcome Affirmation:** Stating the desired result (e.g., "Ball flying high and straight," "Putt dropping in the center").

- **Self-Trust:** Reinforcing belief in one's ability (e.g., "I trust my swing," "I've practiced this a thousand times").
 - **Commitment:** Solidifying resolve (e.g., "I am fully committed to this shot").
- **Length:** Prompts are typically 1-2 short sentences, designed for quick repetition.
- **AI Narration Engine (TTS):** The AI uses high-quality Text-to-Speech (TTS) to present the verbalization prompts clearly. The tone should be encouraging and direct.
- **Data Sources (Prime Tier Only):**
 - **User's VARK Profile (Aural):** Prioritizes verbal instruction and auditory cues.
 - **Mindset Ratings:** If the user logs "Hesitant," "Unsure," or "Lack of Commitment," the AI recommends verbalization practice.
 - **Performance Data:** If the AI identifies inconsistencies or indecision in certain shot types (e.g., "frequent short-sides on chips," "indecision on tee shots"), it can suggest verbalization prompts for those specific scenarios.
 - **Journal Entries/Focus Logs:** User's reflections on overthinking, wavering commitment, or difficulty executing under pressure.
 - **AI's Trend Engine:** Recognizes recurring patterns of indecision or lack of confidence and tailors verbalization suggestions.
- **AI Curation & Delivery:**
 - The AI dynamically selects the most relevant verbalization prompt based on the user's data and current context.
 - **Recommendation Logic:**
 - If the user struggles with committing to a target: "Try saying aloud: 'My eyes are fixed on the target, and I'm swinging through it.'"
 - Before a short putt: "Verbally commit: 'This putt will drop.'"
 - Before a challenging shot where user tends to hesitate: "State your intention clearly: 'I am committed to hitting this powerful draw.'"

- **Contextual Triggering:**
 - **Dedicated "Verbalization Practice" Library:** A browsable section within the **Coach** tab.
 - **Pre-Round Warm-up:** Suggested as part of a mental warm-up routine, focusing on general confidence verbalizations.
 - **Mid-Round Nudge (Subtle):** If the AI detects a confidence dip (via logged mindset or inferred from data), it can offer a quick audio prompt for verbalization (e.g., "Before this next shot, verbally state your intention clearly."). This is especially effective when using headphones.
 - **Post-Round Debrief:** AI recommends specific verbalization practices based on confidence analysis from the round.
 - **AI-Prompted Suggestion:** "Your data shows some indecision on long iron approaches. Practice verbally stating your commitment to the target: 'I see my target, I trust my swing.'"

II. Content/Display Elements (Aural Emphasis):

1. Audio Player Interface:

- **Play/Pause/Repeat:** Standard audio controls.
- **Prompt Text Display (Optional):** The verbalization prompt text can be displayed on-screen while the audio plays, aiding comprehension and memorization.
- **AI-Narrated Prompt:** The core audio delivery of the verbalization phrase.
- **Silence for Repetition:** Each audio clip should include a natural pause after the prompt, allowing the user ample time to repeat it aloud.

2. Verbalization Library View:

- List of available verbalization prompts with brief descriptions.
- Ability to **"Favorite"** prompts for quick access.
- Filter by **confidence aspect** or **shot type** (e.g., "Driving Confidence," "Putting Commitment," "Recovery Shot Intent").

3. AI Rationale Display: When the AI suggests a verbalization prompt, a brief textual explanation (or narrated intro) to explain *why* it's recommended based on user data.

- **Example:** "Your last round showed some hesitation on chip shots. Verbally affirming your intention can help solidify your commitment."

III. UI/UX Considerations:

- **Accessibility:** Easy to find and play prompts, even with limited interaction.
- **Background Play:** Audio should continue playing even if the user navigates away or locks their device.
- **Volume Control:** Standard volume controls.
- **Headphone Recommendation:** Suggest using headphones for an optimal and private experience, especially important for verbalization practice in public settings like a golf course.
- **Discreet Delivery:** For in-round nudges, audio should be subtle and brief to avoid disturbing others.
- **Repetition Focus:** The design should encourage repeated listening and verbalization.
- **Offline Access:** Allow users to download prompts for offline use.
- **AI Voice Quality:** Essential for guiding the practice; ensure a professional, clear, and encouraging TTS voice.
- **Feedback Loop:** Simple "Thumbs Up/Down" or "Did this help?" prompt after practicing a verbalization, helping the AI refine future recommendations.
