FoCoCo Prime Tier: "Feel of Success" Recreations - Technical & Content Specification

Feature Name: AI-Guided Kinesthetic "Feel of Success" Recreations

VARK Modality: Kinesthetic (K)

Pillar: Confidence (specifically for positive reinforcement, memory consolidation, building intuitive trust in physical capabilities, and reducing anxiety by focusing on past mastery)

Description: A Prime-tier feature providing Kinesthetic learners with AI-guided prompts to physically recreate the feeling of their most perfectly struck shots or confidently holed putts. By leveraging past performance data, the AI helps users recall specific successful moments and then guides them through the physical sensations, movements, and postures associated with those successes. This active, embodied recall of positive experiences reinforces muscle memory, builds an internal library of "confident feels," and directly translates into greater self-belief and reduced hesitation on the course.

I. Core Logic & AI Integration

- **User Success Library (Linked to Performance Data):**
 - **Data Integration:** The AI automatically identifies and tags "successful" shots or putts from the user's performance history based on:
 - User's self-reported "confident" swings/putts.
 - Statistically excellent shots (e.g., green in regulation from a challenging lie, long putt holed, perfect drive).

- Journal entries where the user explicitly describes a "perfect feel" or "great shot."
- **User Tagging:** Users can manually tag specific shots or putts in their history as having a "perfect feel" or being a "confidence booster."
- **Recreation Guidance Database (Text, Video, Audio):** A set of instructions for guiding the physical recreation of a successful shot.
 - **Focus Areas:** (e.g., "Pre-Shot Routine Feel," "Takeaway Feel," "Impact Sensation," "Balanced Finish," "Putting Stroke Rhythm," "Weight Shift").
 - **Sensory Prompts:** Specific instructions to focus on kinesthetic, auditory, and even visual details associated with the success (e.g., "Feel the smooth takeaway," "Hear the crisp strike," "See the ball flying perfectly").
 - **Guidance Flow:** A structured sequence of prompts to lead the user through the recreation.
- **AI Recommendation Engine:**
 - The AI dynamically recommends "Feel of Success" recreation sessions based on user data:
 - **User's VARK Profile (K):** Prioritizes physical reenactment and sensory experience.
 - **Mindset Ratings:** If the user logs "Lack of Trust in Swing," "Anxiety over Impact," or "Self-Doubt in Putting," the AI suggests recreating a past successful shot related to that area.
 - **Performance Data:** If the user struggles with a particular shot type, the AI identifies their best past execution of that shot and prompts its recreation.
 - **Journal Entries/Conversational AI:** If the user expresses a desire to "get that feeling back" or remember how it felt to execute perfectly.
- **AI Guided Recreation & Reinforcement:**
 - **Session Start:** User selects a specific past successful shot (or AI suggests one).
 - **Guided Prompting:** The AI provides audio and visual prompts, guiding the user to physically recreate the setup, swing thought, pre-shot routine, backswing, transition, impact, and follow-through of that successful shot.

- **Emphasis on Sensation:** AI focuses on guiding the user to *feel* the physical sensations (e.g., "Now, replicate the feeling of solid contact," "Recall the balance in your finish").
 - **Repetition:** Encourages multiple physical repetitions of the "feel" (e.g., "Perform 5 practice swings, focusing on that exact feeling of effortless power").
 - **Post-Recreation Feedback:** Prompt users to log how strongly they were able to recreate the feeling and its impact on their confidence (e.g., "How close did you get to that perfect feel? Did it boost your confidence?").
- **Contextual Triggering:**
 - **Dedicated "Success Archive" / "Feel of Success" Section:** A prominent section within the **Coach** tab.
 - **Pre-Round Warm-up:** Suggested as a mental and physical warm-up, specifically before challenging shots.
 - **Mid-Round Reset:** If a user logs a confidence dip, the AI can suggest quickly recalling and physically recreating a past successful shot.
 - **AI-Prompted Nudges:** "Remember that amazing drive on Hole 7 last week? Take a moment to physically recreate that powerful swing feel!" (Pushed notification with link).
 - **Post-Performance Debrief:** If the debrief highlights a loss of confidence in a specific shot, the AI suggests recreating past successes for that shot.

II. Content/Display Elements (Kinesthetic Emphasis)

1. "Success Archive" / Shot Selection View:

- **List of Past Successful Shots:** Displayed with key details (date, hole, type of shot, brief outcome).
- **User-Added "Perfect Feel" Tags:** Highlighted shots tagged by the user.
- **AI Recommended Shot:** A specific past success suggested by the AI for recreation.
- **"Recreate Feel" Button:** Leads to the guided session.

2. Guided Recreation Session View:

- **Dynamic Visuals:**

- **Original Shot Video/Animation (if available):** If the user recorded their swing, play it back. Otherwise, a generic animation/video of a "perfect swing/putt" to set the tone.
- **Subtle Text Cues:** Concise prompts appearing on screen (e.g., "Relax shoulders," "Smooth takeaway," "Firm impact").
- **Audio Guidance (Essential):** Calming voice-over that guides the user through the physical movements and prompts them to focus on the *sensory experience*. (e.g., "Close your eyes, and feel the weight shift... now, replicate the feeling of connection through impact...").
- **Repetition Counter:** Tracks how many times the user has physically recreated the feel.
- **"Focus on the Feel" Prompts:** Emphasized text or audio cues that remind the user that the *sensation* is the goal, not the perfect physical replication (e.g., "It's about the feel, not the exact replica").
- **"How did that feel?" Feedback:** A simple interactive element after each recreation, allowing the user to rate how closely they recreated the feeling (e.g., slider from "Didn't feel it" to "Perfect recreation") and its impact on confidence.
- **"End Session" Button.**

III. UI/UX Considerations

- **Multi-Sensory Immersion (K+A+V):** Prioritize clear audio guidance combined with supporting visuals (videos/animations) to immerse the Kinesthetic learner in the physical recreation.
- **Focus on Sensation:** Design elements should continually guide the user's attention to their body's movements and feelings.
- **Intuitive Controls:** Easy play/pause/replay for guidance. Simple input for feedback.
- **Encourage Active Participation:** The interface should strongly prompt users to *physically move* and *feel*, rather than passively observe.
- **No Distractions:** A clean interface during the recreation session to allow for deep focus.

- **Personalization:** The ability to easily select and recall *their own* past successes is crucial.
- **Haptic Feedback (Optional):** Subtle vibrations could be used to emphasize key moments in the recreated swing or putt (e.g., impact, finish).
- **Offline Access:** Audio guides and supporting visuals should be downloadable for offline use.
- **Performance:** Ensure media loads quickly and plays smoothly.
- **Reinforcement:** Positive, encouraging feedback after each recreation attempt, regardless of how "perfect" it felt, emphasizing the *effort* to recall and recreate.
- **Integration with Journal/Mindset:** Option to immediately create a journal entry reflecting on the "feel of success" session or log an updated confidence level.
