FoCoCo Prime Tier: Power Pose Instructions - Technical & Content Specification

Feature Name: AI-Guided Kinesthetic Power Poses for Confidence

VARK Modality: Kinesthetic (K)

Pillar: Confidence (specifically for embodied confidence, physiological regulation, emotional state shifting, and non-verbal communication of self-assurance)

Description: A Prime-tier feature providing Kinesthetic learners with actionable, step-by-step instructions (primarily visual and demonstrative) for adopting specific "power poses" or confident body postures. The AI recommends optimal times and poses based on the user's confidence needs, enabling them to physically embody confidence, reduce physiological stress, and project a more assertive mental state before or during a golf round, thereby directly influencing their self-perception and performance.

I. Core Logic & AI Integration

- **Power Pose Database (Visual & Textual Instructions):** A curated library of specific power poses and confident body language techniques.
 - **For Each Pose:**
 - **Pose Name:** (e.g., "The Superman," "The Confident Stance," "Open Chest Breathing").

- **Purpose/Benefit:** Textual explanation of what the pose helps achieve (e.g., "Increases testosterone, decreases cortisol, boosts feelings of power," "Projects openness and self-assurance").
- **Step-by-Step Instructions (Concise Text):** Clear, minimal text describing how to execute the pose. This text acts as a label or quick reminder for the Kinesthetic learner who learns by doing/seeing.
- **Demonstration Video (Primary Content):** Short, high-quality video loop or animated GIF demonstrating the pose from multiple angles.
- **Demonstration Images (Secondary Content):** A series of still images showing each step of the pose.
- **Recommended Duration:** How long to hold the pose (e.g., "Hold for 1-2 minutes").
- **Best Use Context:** (e.g., "Pre-round in a private space," "Between holes after a bad shot," "Before a key putt").
- **Keywords/Tags:** (e.g., "Anxiety Reduction," "Energy Boost," "Focus," "Self-Belief," "Resilience").

- **AI Recommendation Engine:**

- The AI dynamically recommends specific power poses based on the user's data:
 - **User's VARK Profile (K):** Prioritizes physical demonstration and actionable steps.
 - **Mindset Ratings:** If the user logs "Anxious," "Nervous," "Lacking Energy," or "Self-Doubt," the AI suggests poses known to counteract those states (e.g., "The Superman" for energy/power, "Open Chest Breathing" for calm).
 - **Performance Data:** If the AI identifies recurring performance dips in pressure situations or after errors, it suggests poses for resilience or regaining composure.
 - **Journal Entries/Conversational AI:** If the user expresses a desire for a quick mental reset or physical confidence boost.
 - **Location-Based (Future Potential):** If the user is on the course and logs a negative mindset, the AI could suggest a discreet power pose suitable for on-course use.

- **AI Guidance & Engagement Tracking:**

- The AI prompts users to *do* the pose, rather than just read about it.

- **Post-Pose Feedback:** Prompt users to log how they felt *after* performing the pose (e.g., "How do you feel after doing 'The Superman'?"). This data helps the AI refine future recommendations.
- **Engagement Tracking:** Monitor which poses are viewed, practiced, and rated as effective.
- **Contextual Triggering:**
 - **Dedicated "Power Poses" Section:** A prominent section within the **Coach** tab, specifically designed for Kinesthetic learners.
 - **Pre-Round Warm-up:** Suggested as an optional mental preparation step, especially before competitive rounds.
 - **Mid-Round Reset:** AI can prompt if user logs a negative mindset during a round (e.g., "Feeling nervous on the next tee? Try the 'Confident Stance' for 30 seconds.").
 - **AI-Prompted Nudges:** "Boost your confidence physically! Try 'The Confident Stance' before your next practice shot." (Pushed notification with link directly to the pose's video/instructions).
 - **Post-Debrief Recommendations:** After a written debrief identifies a confidence challenge, the AI can recommend a specific power pose.

II. Content/Display Elements (Kinesthetic Emphasis)

1. Power Pose Library View:

- **Visual Thumbnails:** Each pose has a compelling thumbnail image or a short GIF preview.
- **Pose Name:** Clear, concise title.
- **Brief Benefit Text:** A very short description (e.g., "Instant energy and self-assurance").
- **"Practice Pose" Button:** Leads directly to the detailed instructions and video.
- **AI Recommendation Indicator:** (e.g., "Recommended for your pre-round nerves").

2. Individual Power Pose Instruction View:

- **Primary Content: High-Quality Video/GIF Loop:** Plays prominently, demonstrating the pose continuously.

- **Concise Step-by-Step Text:** Minimal text instructions placed alongside or below the video (e.g., "1. Stand tall, feet hip-width apart. 2. Hands on hips, chest open. 3. Shoulders back and down.>").
- **Duration Timer:** An on-screen timer for holding the pose.
- **Audio Cues (Optional but good for K/A):** Gentle verbal cues to guide posture or breathing during the pose, minimal narration.
- **Purpose/Benefits (Expanded Text):** A slightly longer explanation of the psychological benefits.
- **Contextual Tips (Text):** Suggestions for when and where to use the pose effectively.
- **"How do you feel?" Feedback Button:** Simple interactive element after the pose is complete.

III. UI/UX Considerations

- **Visual Dominance:** The UI should prioritize video and imagery over extensive text, aligning with Kinesthetic learning.
- **Intuitive Controls:** Easy play/pause/replay for videos.
- **Encourage Action:** Design the UI to prompt users to *do* the pose, not just watch. Use action-oriented language.
- **No Distractions:** A clean interface that allows users to focus on the physical movements.
- **Privacy Consideration:** Advise users to find a private space for certain poses, or suggest more subtle alternatives for public areas (e.g., "Confident Chair Pose" if sitting).
- **Haptic Feedback (Optional):** Gentle vibrations as a timer for holding a pose or for success reinforcement.
- **Offline Access:** Allow users to download video demonstrations for offline practice.
- **Accessibility:** Consider clear audio instructions for users with visual impairments.
- **Performance:** Ensure videos load quickly and play smoothly without buffering.
- **Integration with Mindset Logging:** Direct link from the pose practice to the mindset tracker for immediate feedback.
