FoCoCo Prime Tier: Pre-Shot Routine Checklists (Physical Focus) - Technical & Content Specification

Feature Name: AI-Guided Kinesthetic Pre-Shot Routine Builder & Tracker

VARK Modality: Kinesthetic (K)

Pillar: Confidence (specifically for fostering consistency, building automaticity, reducing performance anxiety, and creating a reliable physical anchor for confidence)

Description: A Prime-tier feature providing Kinesthetic learners with interactive checklists to build, customize, and track the physical execution of their pre-shot routine. The AI guides users through each tactile and movement-based step of their personalized routine, allowing them to check off actions as they perform them. This hands-on engagement reinforces muscle memory, builds consistency, and creates a powerful physical anchor for confidence before every shot, regardless of external pressure.

I. Core Logic & AI Integration

- **Pre-Shot Routine Step Database (Text, Visual Cues):** A library of common, effective physical pre-shot routine steps, with associated kinesthetic cues.
 - **For Each Step:**
 - **Step Name/Action:** Concise, action-oriented phrase (e.g., "Walk to target," "Foot alignment," "Waggle," "Deep breath," "Look at target," "Set club behind ball").
 - **Kinesthetic Focus Point:** A brief instruction emphasizing the *feel* or physical sensation (e.g., "Feel your weight balanced," "Feel the grip pressure," "Sense the clubhead path").

- **Optional Visual Cue:** A small icon or animated GIF demonstrating the physical action.
 - **Recommended Duration (Optional):** Time to spend on the step.
 - **Purpose:** Brief explanation of why this physical step is important for confidence.
 - **Keywords/Tags:** (e.g., "Focus," "Calm," "Commitment," "Rhythm," "Grounding").
- **AI Routine Builder & Customization:**
 - The AI assists users in building their personalized pre-shot routine by suggesting steps.
 - **User Selection:** Users can select from a library of physical steps and arrange them in their preferred order.
 - **AI Recommendations:** Based on user data, the AI recommends specific physical steps:
 - **User's VARK Profile (K):** Prioritizes physical, actionable steps.
 - **Performance Data:** If the user struggles with alignment, the AI suggests adding "Feet & Shoulder Alignment Check" as a physical step. If tempo is an issue, it suggests a rhythmic waggle or a practice swing focus.
 - **Mindset Ratings:** If the user logs "Anxious" before shots, the AI suggests incorporating physical calming steps like "Deep Breath & Exhale" or "Grounding Feet."
 - **Journal Entries/Debriefs:** If the user writes about inconsistent routines, the AI prompts them to build a structured one.
 - **Naming/Saving:** Users can name and save multiple routines (e.g., "Driver Routine," "Putting Routine," "Quick Routine").
 - **AI Routine Execution & Tracking:**
 - **Interactive Checklist:** The core of the feature – each step appears as a clickable item.
 - **"Check Off" Action:** As the user *physically performs* a step, they tap or swipe it to mark it complete.
 - **Timer (Optional):** A subtle timer can show how long the routine takes, encouraging consistency.

- **AI Adherence Tracking:** The AI tracks how consistently the user completes their routine before shots/rounds, based on their self-reported completion.
- **Confidence Correlation:** The AI analyzes if consistent routine execution correlates with higher confidence scores or better performance in subsequent shots/rounds.
- **Contextual Triggering:**
 - **Dedicated "My Routines" Section:** A prominent area within the **Coach** tab.
 - **Pre-Round/Pre-Shot Prompt:** The app prompts the user to activate their routine when they log the start of a round or before a key shot/hole (user-selected).
 - **AI-Prompted Nudges:** "Time to activate your confidence! Remember your 'Driver Routine' before your next tee shot. Tap here to go through the checklist." (Pushed notification with direct link).
 - **Performance Debrief Integration:** After a debrief highlights routine inconsistency, the AI suggests using the interactive checklist.

II. Content/Display Elements (Kinesthetic Emphasis)

1. Routine Builder Interface:

- **Drag-and-Drop/Reorder Functionality:** Allows users to physically arrange routine steps.
- **List of Available Steps:** A browsable list of physical actions, each with a brief description and optional visual cue.
- **"Add Step" / "Customize" Buttons.**
- **Routine Name Input.**

2. Interactive Routine Checklist View (During Play/Practice):

- **Large, Clear Text for Each Step:** Emphasizes the physical action (e.g., "**GRIP** and **FEEL** the club").
- **Kinesthetic Cue:** A subtle text reminder of the sensation (e.g., "Feel pressure in the last three fingers").
- **Interactive Element:** A large checkbox, swipe gesture, or button next to each step for the user to tap *after* completing the physical action.
- **Progress Indicator:** Visually shows how many steps are completed.

- **Optional Countdown Timer:** For the routine's total duration.
- **"End Routine" / "Skip Step" Buttons.**

3. Routine Performance History:

- **Textual Summary:** Reports on routine adherence (e.g., "Completed routine 8/10 times this week").
- **Links to Related Rounds:** Connects routine performance to specific golf rounds for correlation.

III. UI/UX Considerations

- **Tactile & Responsive:** The interactive elements (checkboxes, swipes) must be highly responsive to provide immediate feedback on physical action completion.
- **Minimalist & Uncluttered:** During routine execution, the interface should be clean, with large, easy-to-read text, allowing users to quickly interact without distraction.
- **Real-World Usability:** Designed to be quickly and easily used on the course or driving range, even with gloves on or one hand free.
- **Audio Cues (Optional but helpful for K/A):** Subtle auditory feedback when a step is checked off, or a gentle voice guiding through steps, especially for Kinesthetic learners who might also appreciate auditory reinforcement.
- **Haptic Feedback (Optional):** A gentle vibration when a step is successfully checked off.
- **Customization Flexibility:** Empower users to truly make the routine *their own* physically.
- **Offline Access:** The routine steps and the checklist should be fully functional offline.
- **Performance:** Ensure no lag in response time during routine execution.
- **Reinforcement:** Celebrate consistent adherence to the routine with positive written feedback.
- **Integration with Performance Logging:** Allow users to quickly link a completed routine to a specific shot or round data.
