FoCoCo Prime Tier: "Walk with Purpose" Exercise - Technical & Content Specification

Feature Name: AI-Guided Kinesthetic "Walk with Purpose" Exercise

VARK Modality: Kinesthetic (K)

Pillar: Confidence (specifically for embodied confidence, maintaining composure between shots, fostering positive physiological and psychological states, and resetting mindset through movement)

Description: A Prime-tier feature providing Kinesthetic learners with actionable guidance to consciously adopt a confident stride and posture while walking between shots on the golf course. The AI prompts users to engage in this physical exercise to reinforce a positive mindset, reduce lingering frustration from previous shots, and actively prepare for the next, thereby building sustained confidence through purposeful movement and embodied self-assurance throughout their round.

I. Core Logic & AI Integration

- **Exercise Database (Video/GIF, Text & Audio Cues):** A curated set of instructions for adopting a confident walk.
 - **For Each Aspect of the Walk:**
 - **Instructional Point:** (e.g., "Head Up," "Shoulders Back," "Purposeful Stride," "Balanced Walk").
 - **Purpose/Benefit:** Concise textual explanation of the psychological benefit (e.g., "Projects confidence," "Increases oxygen flow," "Signals readiness").

- **Step-by-Step Guidance (Concise Text):** Minimal text describing how to physically execute the instruction while walking.
 - **Demonstration Video/GIF (Primary Content):** Short, high-quality video loops or animated GIFs demonstrating the walking style or specific posture adjustments.
 - **Key Kinesthetic Cues (Text & Optional Audio):** Specific prompts to focus the user's attention on physical sensations (e.g., "Feel your chest open," "Sense the rhythm of your feet," "Notice your gaze focused forward"). Audio cues can verbally guide this during a walk session.
 - **Recommended Duration/Context:** (e.g., "For the next 50 yards," "Between every shot," "After a challenging hole").
 - **Keywords/Tags:** (e.g., "Composure," "Reset," "Focus," "Rhythm," "Energy," "Presence," "Body Language").
- **AI Recommendation Engine:**
 - The AI dynamically recommends the "Walk with Purpose" exercise based on user data and real-time context:
 - **User's VARK Profile (K):** Prioritizes physical actions and experiential learning.
 - **Mindset Ratings:** If the user logs "Frustrated," "Discouraged," "Lacking Energy," or "Negative" after a shot, the AI suggests this exercise as a physical reset.
 - **Performance Data:** If the AI detects a series of poor shots or a "blow-up" hole, it recommends engaging in the walk to mentally and physically reset before the next shot.
 - **Journal Entries/Conversational AI:** If the user expresses a desire to "leave the last shot behind" or maintain composure during a round.
 - **Contextual (GPS/Time - Future Potential):** If the user is detected walking between shots, the AI could proactively prompt the exercise.
- **AI Guidance & Engagement Tracking:**
 - The AI prompts users to *do* the exercise as they walk.
 - **In-Ear Audio Cues:** For on-course use, AI can provide subtle audio prompts guiding the walk (e.g., "Head up. Shoulders back. Feel your feet connect with the ground.").

- **Post-Walk Feedback:** Prompt users to log how they felt *after* performing the walk (e.g., "Did that purposeful walk help you reset?"). This data helps the AI refine future recommendations.
- **Engagement Tracking:** Monitor how often the exercise is initiated and its perceived effectiveness.
- **Contextual Triggering:**
 - **Dedicated "Mid-Round Reset" Section:** Accessible quickly during a round.
 - **Post-Shot Prompt:** Immediately after a logged "bad" shot or a marked "confidence dip" during a round.
 - **AI-Prompted Nudges:** "Just hit a tough shot? Turn the walk to your ball into a confidence builder! Try the 'Walk with Purpose' exercise." (Pushed notification with link directly to the exercise guide).
 - **Pre-Round Warm-up:** Suggested as a preparatory mental walk-through before teeing off.

II. Content/Display Elements (Kinesthetic Emphasis)

1. Exercise Library View:

- **Video Thumbnails/GIFs:** Each aspect of the walk (e.g., posture, stride) has a visual preview.
- **Exercise Name:** Clear title (e.g., "Walk with Purpose").
- **Brief Benefit Text:** A very short description (e.g., "Resets your mindset, boosts energy").
- **"Start Exercise" Button:** Leads directly to the detailed instructions and guided audio/video.
- **AI Recommendation Indicator:** (e.g., "Recommended for quick resets after tough shots").

2. Individual Exercise Instruction View (For On-Course Use):

- **Primary Content: Audio Guidance:** Calming voice-over that guides the user through the physical aspects of the walk. This is crucial for hands-free use on the course.
- **Concise Step-by-Step Text/Bullet Points:** Minimal textual instructions displayed on screen for quick reference, supporting the audio. (e.g., "1.

Shoulders relaxed & back. 2. Head up, eyes forward. 3. Even, confident strides.").

- **Key Kinesthetic/Sensory Cues:** Explicitly highlight the sensations to focus on (e.g., "**Feel the lightness in your step, sense your balance**").
- **Optional Animated GIF/Looping Video:** A subtle background visual demonstrating the confident walk, for reference when the user glances at the screen.
- **Duration/Distance Prompt:** (e.g., "Continue for the next 50 yards," "Until you reach your ball").
- **Purpose/Benefits (Expanded Text):** A slightly longer explanation of the psychological benefits, perhaps accessible via an info button.
- **Contextual Tips (Text):** Suggestions for when and where to best apply the exercise.
- **"How do you feel now?" Feedback Button:** Simple interactive element after the walk, perhaps a quick rating or comment box.

III. UI/UX Considerations

- **Audio-First for On-Course Use:** For a Kinesthetic feature meant for movement, audio guidance is paramount to allow users to keep their focus forward while walking. Visuals should be supportive, not primary.
- **Minimal Interaction During Exercise:** Once started, the exercise should require minimal interaction to allow the user to focus on walking.
- **Intuitive Controls:** Easy play/pause/skip functionality for audio.
- **Discreet Design:** The visual interface should be subtle and quick to glance at, suitable for public use on a golf course.
- **Encourage Action:** Use clear, action-oriented language.
- **Haptic Feedback (Optional):** Subtle vibrations could be used to signal the start/end of a purposeful walk segment or to prompt attention to a specific physical cue.
- **Offline Access:** Audio guides and visual aids should be downloadable for offline use on any course.
- **Battery Efficiency:** Design should be mindful of battery consumption, especially with GPS tracking if implemented.
- **Integration with Round Tracking:** Seamlessly connect the initiation and impact of the walk with the user's live round data and shot outcomes.
- **Motivational Reinforcement:** Positive, encouraging verbal and textual feedback on engagement with the exercise.
