FoCoCo Prime Tier: Confidence-Building Journal Prompts - Technical & Content Specification

Feature Name: AI-Personalized R/W Confidence Journal Prompts

VARK Modality: Read/Write (R/W)

Pillar: Confidence (specifically for introspection, cognitive restructuring, self-awareness, and reinforcing learning through written expression)

Description: A Prime-tier feature offering dynamic, AI-generated written prompts designed to encourage Read/Write learners to reflect on their golf confidence. These prompts guide users to articulate past successes, identify their strengths, reframe challenges as learning opportunities, and explore their mental game in detail, thereby building a personal library of self-awareness and positive reinforcement through the act of writing.

I. Core Logic & AI Integration:

- **Prompt Database (Text):** A comprehensive library of written journal prompts focusing on various aspects of golf confidence.
 - **Categories:**
 - **Past Successes:** Prompts to recall and detail triumphs (e.g., "Describe your most confident shot ever. What did it feel like?").
 - **Strengths & Capabilities:** Focusing on inherent abilities (e.g., "List 3 aspects of your game you are truly confident in right now. Why?").
 - **Lessons from Challenges:** Reframing difficulties (e.g., "Think of a challenging round. What's one key mental lesson you learned that will make you stronger?").

- **Self-Belief Exploration:** Deeper dives into core beliefs (e.g., "What does 'golf confidence' truly mean to you? How does it manifest in your best rounds?").
- **Emotional Processing:** Linking feelings to performance (e.g., "When do you feel most confident on the course, and why?").
- **Goal Reinforcement:** Connecting written reflection to confidence goals (e.g., "How does achieving your current confidence goal feel? Describe it in detail.").
- **Prompt Attributes:** Tag prompts by topic, depth, and intended outcome (e.g., "quick reflection," "deep dive," "problem-solving," "gratitude").
- **AI Prompt Selection & Personalization:**
 - The AI dynamically selects and presents prompts based on the user's current context and historical data:
 - **User's VARK Profile (R/W):** Prioritizes text-based interaction.
 - **Mindset Ratings:** If the user logs "Low Confidence," "Frustrated," "Self-Doubt," or "Anxious," the AI offers prompts that encourage reflection on resilience or past successes.
 - **Performance Data:** If the AI identifies recurring issues in a specific area (e.g., 3-putts), it might prompt reflection on past putting successes or lessons learned from similar challenges.
 - **Journal Entry Analysis (Future Potential):** The AI could potentially analyze keywords or sentiment in previous journal entries to suggest follow-up prompts or prompts addressing recurring themes.
 - **Conversational AI Topics:** If a user discusses confidence challenges with the Conversational AI, it can suggest related journal prompts for deeper reflection.
 - **Dynamic Placeholders:** Prompts can include placeholders for AI to insert user-specific data (e.g., "Recall your stellar birdie on [Hole #] at [Course Name] from [Date]. Write about that moment.").
- **AI Response Analysis (Future Enhancement):** Beyond just receiving text, the AI could (in future iterations):
 - **Sentiment Analysis of User Responses:** Identify positive or negative shifts in the user's reflection.
 - **Keyword Extraction:** Identify recurring themes or challenges the user writes about.

- **Summarization:** Provide a summary of the user's journal entries for them.
- **Suggest Next Steps:** Based on analysis, recommend other app features (e.g., an Aural session on self-talk, a Visual "Confidence Map" review).
- **Contextual Triggering:**
 - **Dedicated "Journal" Section:** A prominent area within the **Coach** tab.
 - **Post-Round Debrief:** After a round, especially if confidence was a factor, the AI offers a relevant prompt.
 - **AI-Prompted Nudges:** "Take a few minutes to reflect on your strengths. Here's a prompt from your journal: [Prompt text]." (Pushed notification).
 - **Weekly/Daily Prompts:** Scheduled prompts to encourage consistent journaling.
 - **User-Initiated:** Users can browse the prompt library and choose one anytime they wish to write.

II. Content/Display Elements (Read/Write Emphasis):

1. Journal Prompt Display:

- **Clear Prompt Text:** Large, legible font for the prompt itself.
- **Contextual Header:** Explains *why* this prompt is being offered (e.g., "To build on your recent success...").
- **Input Area:** A spacious, scrollable text box for the user to type their response.
- **Word/Character Counter (Optional):** To encourage thoroughness.
- **Save/Submit Button:** To save the entry.

2. Journal Entry Viewer:

- **Date & Time Stamp:** For each entry.
- **Prompt Display:** The original prompt linked to the entry.
- **User's Written Response:** Display of the saved text.
- **Editing Capability:** Users should be able to edit past entries.
- **Filtering/Search:** Ability to search or filter entries by keywords, date, or associated prompt category.

3. Prompt Library Browser:

- **List of Prompts:** Display all available prompts with brief titles.
- **Categorization:** Allow filtering by categories (e.g., "Reflect on Success," "Overcome Challenge").
- **"Generate New Prompt" Button:** For random or AI-suggested prompts.

III. UI/UX Considerations:

- **Clean & Uncluttered Interface:** Minimize distractions in the writing area to encourage focus.
- **Intuitive Text Input:** Ensure a smooth and responsive typing experience.
- **Auto-Save Functionality:** Prevent loss of user's written work.
- **Readability:** Optimal font choices, line spacing, and contrast for extended reading and writing.
- **Privacy:** Emphasize that journal entries are private to the user unless they choose to share them (and even then, only with explicit consent for specific features).
- **Emotional Logging Integration:** Potentially allow users to tag emotions within their journal entries or link entries to specific mindset logs.
- **Export Functionality (Future):** Allow users to export their journal entries for personal keeping.
- **Mobile Keyboard Optimization:** Ensure the app handles different keyboard types (e.g., standard, emoji, voice-to-text) seamlessly.
