FoCoCo Prime Tier: R/W Performance Debrief Templates for Confidence

Feature Name: AI-Guided R/W Confidence Debrief Templates

VARK Modality: Read/Write (R/W)

Pillar: Confidence (specifically for structured reflection, identifying patterns, learning from experience, and reinforcing positive mental habits through written analysis)

Description: This Prime-tier feature provides Read/Write learners with structured, AI-guided templates for conducting detailed post-round reflections. These templates encourage users to write about their confidence levels throughout the round, analyzing specific shots and situations to identify what bolstered or diminished their self-belief. By actively processing their experience in writing, users can pinpoint confidence triggers, celebrate mental victories, and learn actionable lessons for future rounds.

I. Core Logic & AI Integration

- **Debrief Template Database (Textual):** A collection of structured, text-based forms designed to guide a comprehensive post-round confidence debrief.
 - **Key Sections/Prompts (examples):**
 - **Overall Confidence Rating:** "On a scale of 1-10, how confident did you feel today, overall?"
 - **Confidence Highs:** "Describe 2-3 moments today where your confidence was at its peak. What were you doing, thinking, and feeling?"

- **Confidence Lows/Challenges:** "Identify 1-2 moments where your confidence wavered. What triggered it? What thoughts or emotions arose?"
 - **Resilience & Recovery:** "How did you respond to setbacks or moments of doubt? Were you able to bounce back confidently?"
 - **Pre-Shot Routine & Trust:** "Did you consistently commit to your pre-shot routine? How did trusting your process impact your confidence?"
 - **Course Management & Strategy Confidence:** "How confident were you in your strategic decisions today? Where could you have trusted your plan more?"
 - **Key Learning & Action:** "Based on today's round, what's one mental confidence lesson you're taking away? What's one specific action you'll take before your next round to boost confidence?"
 - **Guidance Text:** Brief, inline explanations or questions for each field to guide the user's reflection.
- **AI Template Selection & Personalization:**
 - The AI suggests the most relevant debrief template based on the user's round data:
 - **User's VARK Profile (R/W):** Prioritizes written reflection.
 - **Mindset Logging:** If the user logged specific confidence issues or emotional fluctuations during the round (e.g., "anxious" on certain holes, "frustrated" after bogeys), the AI can customize prompts to focus on those areas.
 - **Performance Data:** If the AI identifies specific statistical trends (e.g., high 3-putt count, multiple missed fairways), it can prompt reflection on confidence related to those shots.
 - **Goal Tracking:** If the user has active confidence-related SMART goals, the debrief can include prompts to reflect on progress towards those goals.
- **AI Analysis & Insights (Read/Write Output):**
 - The AI can analyze completed debriefs (using Natural Language Processing - NLP) to:
 - **Identify Recurring Themes:** Highlight common triggers for confidence dips or patterns of successful mental recovery.

- **Summarize Key Takeaways:** Extract the main lessons the user has identified.
 - **Generate Trend Reports:** Contribute data to the "AI-Generated Confidence Reports," showing how debrief reflections correlate with overall confidence trends.
 - **Suggest Next Steps:** Based on the written debrief, recommend other app features (e.g., a specific "Thought Record" worksheet for a recurring negative thought, an "Affirmation List" to build confidence in a weak area, or an "Aural Expert Tip" on a relevant topic).
- **Contextual Triggering:**
 - **Post-Round Prompt:** Immediately after a round is logged, the app prompts the user to complete a debrief, emphasizing the confidence focus.
 - **Dedicated "Debriefs" Section:** A prominent, browsable archive within the **Coach** tab.
 - **AI-Prompted Nudges:** "Take 5 minutes to debrief your round. Reflecting on your confidence highs and lows can unlock key insights!" (Pushed notification with link).
 - **Weekly Review Reminders:** The AI can prompt users to complete a weekly debrief summarizing their confidence journey across multiple rounds.

II. Content/Display Elements (Read/Write Emphasis)

1. Debrief Template Interface:

- **Clear Questions/Prompts:** Each section or question is clearly presented in an easy-to-read font.
- **Spacious Text Input Fields:** Dedicated, multi-line text boxes for users to type their detailed responses.
- **Save/Submit Button:** To save the completed debrief.
- **Progress Indicator (Optional):** A visual bar showing completion percentage of the debrief.

2. Completed Debrief Viewer:

- **Date & Round Summary:** Clearly displays the date and key round details (score, course).

- **Original Prompts & User Responses:** Presents the completed template, showing both the prompt and the user's written reflection for each section.
 - **Editing Capability:** Users can edit past debriefs.
 - **Search/Filter:** Ability to search or filter debriefs by keywords, date, or specific confidence themes.
3. **Debrief History/Archive:**
- A list of all completed debriefs, sortable by date.
 - Option to export a debrief to PDF or plain text for personal records.

III. UI/UX Considerations

- **Readability:** Prioritize high contrast, appropriate font sizes, and comfortable line spacing for a clear and engaging writing experience.
- **Intuitive Text Input:** Ensure a smooth and responsive typing experience, ideally with features like auto-capitalization and basic text formatting.
- **Auto-Save Functionality:** Essential to prevent loss of user's reflection data.
- **Minimal Distractions:** The interface for the debrief should be clean and focused, encouraging deep reflection.
- **Privacy:** Clearly communicate that debrief entries are private and secure.
- **Guidance:** Provide optional tips or examples for writing effective reflections within the templates.
- **Integration with Other Features:** Seamless linking to other relevant confidence-building features for recommended next steps, enhancing the user's journey.
- **Mobile Keyboard Optimization:** Ensure the app handles various keyboard types (standard, voice-to-text) seamlessly for efficient input.
