FoCoCo Prime Tier: Structured Goal Setting - Technical & Content Specification

Feature Name: AI-Guided R/W SMART Confidence Goal Setting

VARK Modality: Read/Write (R/W)

Pillar: Confidence (specifically for clarity, commitment, structured planning, and measurable progress tracking)

Description: A Prime-tier feature that provides Read/Write learners with structured templates for crafting Specific, Measurable, Achievable, Relevant, and Time-bound (SMART) goals specifically focused on building golf confidence. The AI guides users through the goal-setting process, helping them articulate clear objectives in writing, thereby enhancing commitment and providing a tangible blueprint for tracking progress and reinforcing self-belief.

I. Core Logic & AI Integration:

- **SMART Goal Template Database (Textual):** A collection of pre-designed, fill-in-the-blank or guided textual templates for confidence-related SMART goals.
 - **Goal Categories:** Mental Resilience, Pre-shot Confidence, Post-shot Recovery, Trust in Swing/Putts, Course Management Confidence, Confidence Under Pressure, Consistent Positive Self-Talk.
 - **Template Structure (for each SMART component):**
 - **Specific:** Prompts like "What *exactly* will you achieve regarding your confidence?" or "Focus on *one* specific aspect of confidence."

- **Measurable:** Questions like "How will you know when you've achieved this? What metric will you track?" (e.g., "Log 'Confident' mindset 80% of the time," "Reduce 3-putts by 50%," "Successfully execute pre-shot routine 9 out of 10 times").
- **Achievable:** Prompts for realistic assessment (e.g., "Is this goal challenging but realistic given your current skills and time?").
- **Relevant:** Questions about alignment with overall golf aspirations (e.g., "Why is this confidence goal important to your overall game?").
- **Time-bound:** Prompts for deadlines (e.g., "By when will you achieve this?").

- **AI Goal Suggestion & Refinement:**

- The AI suggests relevant confidence goals based on user data:
 - **User's VARK Profile (R/W):** Prioritizes text-based interaction for goal articulation.
 - **Mindset Ratings:** If the user frequently logs low confidence in certain areas (e.g., "anxious on long putts"), the AI can suggest a SMART goal focused on putting confidence.
 - **Performance Data:** If the AI identifies recurring performance issues (e.g., high scores on par 3s, frequent slices), it can suggest confidence goals tied to improving those specific areas (e.g., "Confidently hit 50% of par 3 greens in regulation by [Date]").
 - **Journal Entries/Conversational AI:** If the user has expressed a desire to improve confidence in a specific aspect of their game.
- The AI can provide **written feedback** on user-inputted goals, guiding them to make existing goals more SMART (e.g., "Your goal 'Be more confident' is a great start! Can you make it more *measurable* by adding how you'll track it?").

- **Goal Tracking & Progress Reporting:**

- Once a SMART goal is set, the AI continuously monitors relevant performance and mindset data.
- It provides **written updates** on progress towards the goal (e.g., "You're 60% towards consistently logging a 'Committed' mindset during your pre-shot routine!").

- **Contextual Triggering:**

- **Dedicated "Set a Confidence Goal" Section:** A prominent area within the **Coach** tab or a specific "Goals" module.
- **Post-Round Debrief:** If confidence was a key factor, the AI offers to guide the user in setting a new confidence-focused SMART goal.
- **AI-Prompted Nudges:** "Ready to clarify your confidence? Let's set a SMART goal to guide your mental game." (Pushed notification with link to template).
- **Regular Check-ins:** The AI can prompt periodic written reviews of active goals.

II. Content/Display Elements (Read/Write Emphasis):

1. SMART Goal Creation Interface:

- **Prompt/Question per SMART component:** Each section (Specific, Measurable, Achievable, Relevant, Time-bound) has a clear, written question or prompt.
- **Text Input Fields:** Dedicated, multi-line text boxes for users to write their responses for each SMART component.
- **AI Guidance Text:** Brief, inline text from the AI offering tips or examples for that specific component (e.g., under "Measurable": "Consider metrics like mindset logs, putts per round, or successful shot percentages.").
- **Example Goals (Pre-populated/Selectable):** Users can see or select from pre-written SMART confidence goal examples.
- **"Review My Goal" / "Submit Goal" Button:** To finalize the goal creation.

2. Goal Display & Tracking:

- **Goal Card:** A visual card for each active SMART goal, clearly displaying the written goal statement.
- **Progress Updates (Text):** Written percentage or qualitative updates on progress.
- **Historical Log:** A written log of all past goals (achieved or not) for review.

3. AI Feedback Messages:

- **Written Suggestions:** AI provides text-based suggestions for refining goals.

- **Encouragement:** Textual encouragement when progress is made or a goal is achieved.

III. UI/UX Considerations:

- **Clarity & Simplicity:** The interface for setting goals must be clean, intuitive, and easy to navigate, minimizing cognitive load for writing.
- **Spacious Text Fields:** Provide ample room for users to write detailed responses.
- **Auto-Save Functionality:** Crucial to prevent loss of user's written work during the goal-setting process.
- **Progress Indicators:** As users complete each SMART section, visual cues (e.g., checkmarks, progress bar) indicate completion.
- **Editing Capabilities:** Users should be able to easily edit existing goals.
- **Search/Filter:** Ability to search or filter past goals.
- **Export Functionality (Future):** Allow users to export their set goals and progress logs.
- **Integration with Other R/W Features:** Seamlessly link to journal entries where users can reflect on their progress towards goals.
