FoCoCo Prime Tier: "Thought Record" Worksheets - Technical & Content Specification

Feature Name: AI-Guided R/W Confidence Thought Records

VARK Modality: Read/Write (R/W)

Pillar: Confidence (specifically for cognitive restructuring, challenging negative self-talk, emotional regulation, and fostering rational self-belief)

Description: A Prime-tier feature providing Read/Write learners with structured, AI-guided "Thought Record" worksheets. These written exercises empower users to identify specific negative thoughts related to their golf game, analyze their impact, challenge their validity, and systematically replace them with more balanced, realistic, and confident thoughts, thereby building mental resilience and self-awareness through active cognitive restructuring.

I. Core Logic & AI Integration:

- **Thought Record Template Database (Textual):** A collection of structured, multi-field text-based worksheets, rooted in Cognitive Behavioral Therapy (CBT) principles, adapted for golf.
 - **Standard Fields (for each record):**
 1. **Situation/Trigger:** "What happened? Where were you? (e.g., 'Standing over a 4-foot putt on Hole #16')."

2. **Emotion(s):** "What did you feel? (e.g., 'Anxious,' 'Frustrated,' 'Nervous')." Provide a list of common golf emotions for selection or free-text input.
 3. **Automatic Negative Thought (ANT):** "What thought went through your mind? (e.g., 'I always miss these putts,' 'I'm going to choke')."
 4. **Evidence for the Thought:** "What facts support this thought? (e.g., 'I missed one yesterday')."
 5. **Evidence Against the Thought:** "What facts contradict this thought? (e.g., 'I've made hundreds of these putts in practice,' 'I made a similar putt on Hole #7')."
 6. **Alternative/Balanced Thought:** "What's a more realistic, confident, and helpful thought? (e.g., 'This is a makeable putt; focus on my process')."
 7. **New Emotion(s):** "How do you feel now after reframing? (e.g., 'Calmer,' 'More hopeful,' 'Committed')."
- **Guidance Text:** Brief, inline explanations or questions for each field to guide the user in completing it effectively.
- **AI Prompting & Guidance:**
 - The AI will present the Thought Record worksheet and provide gentle, written guidance through each step.
 - **Initial Prompts:** "Reflect on a recent moment where your confidence wavered. Let's break it down."
 - **Contextual Suggestions:** If the user logs a specific negative mindset (e.g., "self-doubt"), the AI can suggest creating a Thought Record for that moment.
 - **Reframing Assistance (Future Potential):** In more advanced iterations, the AI *could* (with careful design to avoid over-reliance and maintain user agency) analyze user's ANTs and offer suggested alternative thoughts based on a knowledge base of common cognitive distortions and confident reframes. This would require highly sophisticated NLP. For initial implementation, the AI's role is primarily to guide the *process* of self-reframing.
 - **Data Sources (Prime Tier Only):**
 - **User's VARK Profile (R/W):** Prioritizes written exercises for cognitive processing.

- **Mindset Ratings:** Primary trigger – if the user logs negative mindsets (e.g., "self-doubt," "anxious," "frustrated," "overthinking"), the AI will recommend a Thought Record.
 - **Journal Entries:** If the AI's NLP detects recurring negative self-talk patterns in free-form journal entries, it can suggest a Thought Record.
 - **Performance Data:** If there's a correlation between a certain type of shot/situation and negative performance, the AI can prompt a Thought Record for that scenario.
 - **Conversational AI:** If the user discusses specific negative thoughts, the AI can direct them to a Thought Record for structured processing.
- **AI Analysis & Reporting (Read/Write Output):**
 - The AI can generate **written summaries** of common ANTs the user identifies and the successful reframes they've created.
 - It can highlight patterns of cognitive distortions (e.g., "You frequently engage in 'all-or-nothing' thinking after a missed shot. Your thought records show this pattern.").
 - These analyses would be part of the "AI-Generated Confidence Reports" feature.
- **Contextual Triggering:**
 - **Dedicated "Thought Records" Section:** A prominent area within the **Coach** tab.
 - **Post-Round Debrief:** Particularly after a challenging round or specific frustrating holes.
 - **AI-Prompted Nudges:** "Feeling stuck in a negative thought loop? Try a Thought Record worksheet to challenge it and build a more confident mindset." (Pushed notification).
 - **As part of a "Mental Reset" Flow:** During a practice session or pre-round warm-up, if desired.

II. Content/Display Elements (Read/Write Emphasis):

1. Thought Record Worksheet Interface:

- **Clear Headings:** Each field (Situation, Emotion, ANT, Evidence For/Against, Alternative, New Emotion) is clearly labeled.

- **Spacious Text Input Fields:** Multi-line, scrollable text boxes for user to type their detailed responses.
- **Guidance Text:** Contextual, unobtrusive text next to each field explaining its purpose and guiding the user.
- **Emotion Picker (Optional but recommended for consistency):** A pre-defined list of common golf emotions for the user to select from, in addition to free-text input.
- **"Save Record" Button:** To submit the completed worksheet.
- **"Clear" or "Start New" Button:** For fresh worksheets.

2. Thought Record History/Archive:

- **List View:** Displays past completed thought records, sortable by date, emotion, or keywords from the ANT.
- **Detail View:** Clicking a record shows the full, completed worksheet.
- **Search/Filter:** Ability to search past records for specific thoughts or patterns.
- **Export Functionality:** Option to export a single record or a collection of records (e.g., PDF or plain text).

III. UI/UX Considerations:

- **Clean & Structured Layout:** The worksheet should be easy to follow visually, with clear separation between fields.
- **Intuitive Text Input:** Ensure a smooth and responsive typing experience.
- **Auto-Save Functionality:** Crucial to prevent loss of user's written work.
- **Readability:** Optimal font choices, line spacing, and contrast for comfortable reading and writing.
- **Privacy:** Emphasize that these deeply personal records are private and secure.
- **Progress Tracking:** Potentially display a small counter for "Completed Thought Records" or "Reframed Thoughts" to encourage consistent use.
- **Integration with Journal:** Seamlessly link to the main journal feature, perhaps allowing a Thought Record to be created directly from a journal entry.
- **Mobile-First Design:** Ensure the worksheet is highly usable on smaller mobile screens with easy keyboard access.
