Date: July 5, 2025

FoCoCo Prime Tier: "Confidence Map" - Technical & Content Specification

Feature Name: AI-Visualized Golf "Confidence Map"

VARK Modality: Visual (V)

Pillar: Confidence (specifically for reinforcing success associations, strategic planning, and overcoming mental blocks)

Description: A Prime-tier feature that provides a unique visual representation of a user's performance history, highlighting courses where they typically perform well and specific holes where their confidence and success metrics are consistently high. Designed for Visual learners, this interactive "Confidence Map" allows users to visually identify their personal "zones of confidence" and leverages this data to build self-belief and strategic awareness.

I. Core Logic & AI Integration:

- **Data Aggregation:** The AI collects and processes detailed historical performance data linked to specific courses and individual holes:
 - **Course-level Data:** Average score, average GIR/FIR, putts per round, overall mindset trends for each unique course played multiple times.
 - **Hole-level Data:** Average score per hole, average putts per hole, GIR/FIR success per hole, birdie/bogey frequency, and associated mindset logs for *each specific hole* played.
 - **"Confidence Metrics":** The AI calculates an internal "Confidence Score" for each course/hole based on a weighted average of positive performance

(e.g., birdies, pars, GIRs, low putts) and positive mindset logs (e.g., "Confident," "Flow," "Committed").

- **AI Pattern Identification & Mapping:**

- The AI's "Trend Engine" analyzes this granular data to identify:
 - **High-Confidence Courses:** Courses where the user consistently performs above their average or logs high numbers of positive mindset emojis.
 - **High-Confidence Holes:** Specific holes (e.g., "Hole #7 at [Course Name]") where the user consistently scores well, hits green/fairway, or logs positive mindsets, regardless of overall round performance.
 - **"Comfort Zones":** Visual clustering of high-confidence holes on a course layout.
- **Visual Transformation:** The AI translates these identified patterns into a compelling visual map format.

- **Strategic Insights & Confidence Boost:**

- Generates encouraging textual insights linked to the map, explaining *why* certain areas are confidence zones (e.g., "Your accuracy on doglegs makes Hole #12 at Lakeside a consistent confidence builder!").
- Recommends focusing on the positive feeling from "confidence holes" when facing challenges on other holes.
- Suggests mental preparation strategies for upcoming rounds on courses with mixed or lower confidence.

- **Contextual Triggering:**

- **Dashboard (Main "Confidence" Section):** A prominent, interactive feature.
- **Pre-Round Preparation:** When a user selects a course to play, the "Confidence Map" for that specific course is highlighted, showing their strong holes.
- **Post-Round Debrief:** The AI can update the map with new performance data and highlight any new "confidence zones" achieved.
- **AI-Prompted Exploration:** "Let's check your personal 'Confidence Map' for your upcoming round at [Course Name]. See which holes you typically dominate!"

II. Content/Display Elements (Visual Emphasis):

1. Global Course Map:

- A world/region map (or a scrollable list of courses played) where each course the user has played is marked.
- **Color-coding/Highlighting:** Courses where the user performs exceptionally well could be highlighted in a "confident green" or have a special icon.
- **Numerical Confidence Score:** A small, overall "Confidence Score" displayed next to each course name.

2. Individual Course Layout View:

- When a specific course is selected, a visual layout of the 18 holes is displayed (standard golf course map view).
- **Hole Color-coding:** Each hole is color-coded based on the user's "Confidence Score" for that specific hole (e.g., bright green for high confidence/success, yellow for average, light red for challenging).
- **Confidence Icons/Badges:** Small, overlay icons on individual holes indicating specific achievements or positive mindsets logged frequently on that hole (e.g., a "Birdie Badge," a "Flow State" icon).
- **Interactivity:** Tapping on a hole reveals detailed performance and mindset data for that hole across all rounds played.

3. AI Insight Box:

- A dynamic text box accompanying the map view, providing personalized insights (e.g., "Your consistent pars on all the short Par 3s at Oakwood Hills make them confidence boosters!").
- Suggestions for leveraging these insights (e.g., "When you get to Hole #5, remember your past successes here and carry that feeling forward!").

4. Visual Filters:

- Allow users to filter the map to show "Best Putting Holes," "Best Driving Holes," "Highest GIR Holes," etc., through visual toggles.

III. UI/UX Considerations:

- **Intuitive Navigation:** Easy zoom, pan, and selection of courses/holes on the map.
- **Clear Visual Hierarchy:** The most confident areas/holes should visually pop out.
- **Tooltip/Legend:** Clear explanations for color-coding, icons, and numerical scores.
- **Responsiveness:** The map should adapt well to different screen sizes and orientations.
- **Performance:** Map rendering needs to be smooth, even with extensive historical data.
- **"Set as Confidence Goal":** Option for users to select a lower-confidence hole and set it as a goal to improve, with visual tracking on the map.
- **Before Round Check-in:** A quick glance at the Confidence Map for the upcoming course to mentally highlight strong holes.
- **Shareability:** Option to easily share a visual snapshot of their Confidence Map.
