FoCoCo Prime Tier: Course Walkthrough Visuals - Technical & Content Specification

Feature Name: AI-Guided Visual Course Confidence Walkthrough

VARK Modality: Visual (V)

Pillar: Confidence (specifically for strategic planning, anxiety reduction, and pre-round mental preparation)

Description: A Prime-tier feature providing detailed, interactive course maps with AI-highlighted areas for strategic, confidence-building approaches on each hole. Designed for Visual learners, this tool allows users to visually "walk through" a course, identify optimal safe targets, understand risk-reward visually, and develop a confident game plan, thereby reducing pre-round anxiety and enhancing strategic self-belief.

I. Core Logic & AI Integration:

- **Course Map Data Integration:** Requires access to high-quality, hole-by-hole visual course maps (e.g., satellite imagery, detailed graphics). This could be sourced via partnerships with golf course mapping providers.
- **Data Aggregation:** The AI utilizes the user's historical performance data on a specific course/hole (from "Confidence Map" and general round logging) as well as general golf strategy principles.
 - **User-Specific Performance:** Average driving distance, typical shot dispersion (left/right bias), green-in-regulation tendencies, putting strengths/weaknesses.

- **Course Data:** Par, yardage, hazard locations (bunkers, water, OB), elevation changes, green complexes.
- **AI Strategic Analysis & Highlighting:**
 - The AI overlays "strategic confidence zones" onto the visual map for each hole. These zones are:
 - **Optimal Landing Zones:** Based on user's average drive and dispersion, highlighting the widest, safest part of the fairway.
 - **"Bail-Out" Areas:** Visually marked safe zones for recovery shots when a direct approach is too risky.
 - **Putting Confidence Lines:** (For greens) Simplified visual lines showing common putts made or safer targets.
 - **Avoidance Zones:** Clearly demarcated areas of high risk (e.g., water, deep bunkers), visually prompting users to avoid them.
 - **Risk-Reward Visualization:** Visual cues (e.g., a "safe" path in green, a "risky" path in amber/red) to help users see the consequence of aggressive vs. conservative play.
 - **Personalized Strategy Suggestions:** Generates concise textual suggestions accompanying the visual highlights, tailored to the user's typical strengths and weaknesses:
 - "Aim for the center of the fairway here, it's your highest percentage shot."
 - "Your short game excels, so a lay-up to [yardage] before the water is a confident approach."
 - "Notice the safe landing zone right of this bunker – visually commit to that target."
- **Contextual Triggering:**
 - **Pre-Round Preparation:** The primary use case. Users select an upcoming course to review its confidence walkthrough.
 - **Coach Section (Strategy Library):** A browsable library of course walkthroughs for all played/favorite courses.
 - **Post-Round Debrief:** After a challenging round or specific holes, the AI can recommend reviewing the course walkthrough for those holes to build a more confident plan for next time.

- **AI-Prompted Suggestion:** "Playing [Course Name] next week? Let's review the Course Walkthrough to identify your confident strategic targets for each hole."

II. Content/Display Elements (Visual Emphasis):

1. Interactive Course Map:

- High-resolution aerial view or graphical representation of each hole.
- **Zoom & Pan Functionality:** Allows users to explore different parts of the hole.
- **Hole-by-Hole Navigation:** Clear buttons or swipe gestures to move between holes.

2. Visual Overlays & Highlights:

- **Color-Coded Zones:** Use distinct colors to visually mark:
 - Green: Optimal/Safe target areas (fairways, greens).
 - Yellow/Amber: Moderate risk areas or strategic lay-up zones.
 - Red: High-risk areas (hazards, OB).
- **Arrows/Lines:** Clearly drawn lines indicating recommended shot paths or putting lines.
- **Yardage Markers:** Visually integrated yardage markers to highlighted zones.
- **Icons:** Small, intuitive icons for hazards, greens, tees.

3. Accompanying Textual Strategy:

- Concise, contextual AI-generated strategic advice (e.g., "Drive to the 150-yard marker for a perfect approach angle," "Avoid the left bunker, your typical miss is right").
- Emphasis on *confident* decision-making.

4. Before & After View (Optional): Ability to toggle between a "raw" map and an "AI-Strategized" map to highlight the suggested changes.

III. UI/UX Considerations:

- **Visual Clarity:** Overlays must be clear, legible, and not obscure the underlying map.
- **Intuitive Interactions:** Easy to tap, pinch-zoom, and swipe.
- **Offline Access:** Pre-downloading course maps for offline review before a round.
- **Customization:** Users could potentially add their *own* notes or preferred targets onto the map (for advanced personalization).
- **Performance:** Map loading and rendering must be smooth, especially with detailed graphics.
- **Integration with "Confidence Map":** Seamless transition from seeing a "confident hole" on the Confidence Map to then launching its detailed "Course Walkthrough Visual."
- **AI Rationale:** When AI highlights a specific strategy, provide a brief explanation based on user data (e.g., "We're recommending a lay-up here because your long iron accuracy typically suffers on this type of approach shot, leading to higher scores.").
