FoCoCo Prime Tier: Mental Rehearsal Visuals - Technical & Content Specification

Feature Name: AI-Guided Visual Mental Rehearsal of Past Successes

VARK Modality: Visual (V)

Pillar: Confidence (specifically for reinforcing self-efficacy, accessing peak performance states, and overcoming past failures)

Description: A Prime-tier feature that leverages AI to prompt Visual learners to mentally replay their *own* successful past golf experiences. Through descriptive visual cues and contextual data, the app guides users to vividly recall, re-experience, and build a personalized mental library of positive memories, serving as a powerful resource for building and accessing confidence.

I. Core Logic & AI Integration:

- **Data Aggregation for "Success Moments":** The AI identifies specific "Success Moments" from the user's logged history based on criteria such as:
 - **Personal Bests:** Lowest scores, best rounds, specific hole scores (birdies/eagles).
 - **Key Performance Indicators (KPI) Milestones:** Rounds with highest GIR/FIR, lowest putts, best scrambling percentage.
 - **Successful Recovery Shots:** (If logged or inferred) Difficult up-and-downs, long bunker saves.

- **Mindset Correlation:** Moments associated with logged "Confident," "Flow," or "Committed" mindsets.
 - **User-Flagged Moments:** Future potential for users to "star" or "tag" specific shots/holes/rounds as "peak moments."
- **AI Curation & Selection:**
 - The AI intelligently selects the most relevant "Success Moments" for mental rehearsal based on:
 - **Current User Need:** If the user is struggling with putting, the AI suggests replaying a specific round with exceptional putting. If confidence is low after a bad driving day, it prompts a replay of their best driving round.
 - **Recent Relevance:** Prioritizes more recent successes to feel current and achievable.
 - **Diversity:** Aims to provide a variety of successes (driving, irons, short game, putting) over time.
 - The AI formulates visual prompts based on the selected moment's context (course, hole, specific shot type).
- **Guided Visual Replay Prompts:**
 - Prompts are delivered as structured, descriptive text on-screen, guiding the user's imagination.
 - They encourage the user to visualize specific details of the past event:
 - The course layout, weather, lighting conditions.
 - Their own confident body language and posture.
 - The crisp contact, the ball's flight path, the exact trajectory into the hole.
 - The positive emotions felt at that moment.
 - The AI can subtly pull in specific logged details (e.g., "Recall your incredible 25-foot birdie putt on Hole #14 at [Course Name] on [Date]").
- **Building a "Positive Mental Library":** The act of repeatedly replaying these successes strengthens neural pathways associated with positive performance, making it easier for the user to access these peak states under pressure.

- **Contextual Triggering:**
 - **Dedicated "Mental Rehearsal" Section:** A prominent area within the Coach tab.
 - **Pre-Round Warm-up:** AI suggests replaying 1-2 specific successful shots from the upcoming course.
 - **Mid-Round Reset:** If the AI detects a dip in confidence or a series of poor shots, it can offer a quick, concise prompt to mentally replay a recent successful recovery or a signature shot.
 - **Post-Round Debrief:** The AI can highlight specific "Success Moments" from the round just played for immediate mental rehearsal.
 - **AI-Prompted Suggestion:** "Your putting confidence seems to be a bit low. Take 2 minutes to visually replay your stellar putting round from [Date] at [Course Name]."

II. Content/Display Elements (Visual Emphasis):

1. Rehearsal Session Screen:

- **Title:** "Replay Your Triumph: [Specific Success Moment]" (e.g., "Replay Your Stellar Drive on Hole 10," "Your 25ft Putt on #14").
- **Introductory Text:** Briefly sets the scene and reminds the user of the success (e.g., "Remember that perfect drive on Hole 10 at Oakwood Hills from your round on June 5th? Let's re-experience it.").
- **Step-by-Step Visual Prompts:**
 - Clearly numbered steps (e.g., "Step 1: The Setup," "Step 2: The Swing," "Step 3: The Outcome").
 - Large, clear text prompts focusing on visual details:
 - **"See yourself standing on the tee box.** What did the fairway look like? The sky? Your stance?"
 - **"Visualize your confident backswing, perfectly on plane.** See the club at the top."
 - **"Watch the ball launch off the clubface, perfectly straight.** See its entire flight path."
 - **"See it land softly on the green, rolling towards the cup."**
 - Minimalist UI to avoid distraction.

- **Session Timer/Progress Bar:** (Optional) To indicate the duration or progress of the mental rehearsal.
2. **"My Success Library" (Browse):**
- A visual gallery of "Success Moments" identified by the AI.
 - Each entry shows a thumbnail image (e.g., a map of the hole, a generic golf action, or a placeholder image if user photos aren't integrated).
 - Brief title and date of the success.
 - Categorization (e.g., "Best Drives," "Clutch Putts," "Greatest Rounds").
3. **AI Insights:** Post-rehearsal AI commentary reinforcing the benefits and linking the visualized success to current goals. (e.g., "That replay strengthens your mental blueprint for powerful drives. Access this feeling next time you're on the tee.")

III. UI/UX Considerations:

- **Immersive Full-Screen Mode:** To minimize distractions during visualization.
- **Clear, Readable Fonts:** Especially important for guiding mental imagery.
- **Simple Navigation:** "Start," "Pause," "Next Prompt," "Finish" buttons.
- **Optional Background Ambience:** Gentle, non-distracting golf-related sounds to enhance focus (e.g., quiet breeze, distant birds).
- **"Did this feel vivid?" Feedback:** A simple prompt at the end to gauge the user's experience and refine AI suggestions.
- **Personalized "Thumbnail" Images (Future):** If the app integrates with course maps or user-uploaded photos, actual visual context from the success moment could be used as the thumbnail.
- **Integration with "Positive Highlight Reels":** Overlap between "Success Moments" for Mental Rehearsal and the content for "Positive Highlight Reels."
- **"Create My Own Memory" (Future):** Allow users to manually input details of a successful shot they want to "save" for future mental rehearsal, even if not fully captured by app data.
