### **FoCoCo Prime Tier: Role Model Visualization - Technical & Content Specification**

**Feature Name:** AI-Guided Visual Role Model Emulation for Confidence

**VARK Modality:** Visual (V)

**Pillar:** Confidence (specifically for externalizing confidence, learning from exemplars, and adopting powerful mental frameworks)

**Description:** A Prime-tier feature that provides AI-guided visualization prompts for Visual learners to mentally observe and emulate the confident demeanor, body language, and mental approach of a chosen or AI-suggested golf role model. This allows users to build confidence by visually "trying on" and internalizing the traits of success they admire, fostering a positive self-image and powerful on-course presence.

#### **I. Core Logic & AI Integration:**

- **Role Model Library (Curated & User-Defined):**
  - **Curated Library:** A database of professional golfers (or generic "confident golfer" archetypes) known for their strong mental game, composure, and positive body language. Each entry includes:
    - High-quality static images or short GIFs showcasing their confident demeanor (e.g., walk, pre-shot routine, post-shot reaction).
    - Brief descriptions of their notable confidence traits (e.g., "unflappable composure," "powerful presence," "calm under pressure").

- **User-Defined Role Model:** Users can input their own role model (e.g., a specific pro, a playing partner they admire, or even an idealized version of themselves). AI will prompt users to describe their confident traits.
- **Data Sources (Prime Tier Only):**
  - **User's VARK Profile (Visual):** Prioritizes visually driven exercises.
  - **Mindset Ratings:** If user logs "Low Confidence," "Anxious," or "Self-Doubt," the AI recommends role model visualization.
  - **Performance Challenges:** If AI detects struggles with composure in specific situations (e.g., "struggles after a bogey"), it might suggest a role model known for resilience.
  - **Journal Entries/Focus Logs:** User's reflections on admired traits in others, or their own aspirations for confidence.
  - **AI's Trend Engine:** Identifies consistent confidence gaps or areas where emulating a specific trait would be beneficial.
- **AI Guidance & Emulation Prompts:**
  - The AI selects a relevant role model (from curated or user-defined) and creates a guided visualization script.
  - **Visual Prompts:** Emphasizes specific visual details for the user to imagine:
    - "See [Role Model's Name] walk purposefully to their ball, head held high."
    - "Watch their calm, deliberate pre-shot routine, every movement precise."
    - "Notice their unwavering gaze, focused purely on the target."
    - "Observe their poised and balanced finish, even after a tough shot."
    - "Imagine yourself embodying that exact composure, seeing yourself from a third-person perspective."
  - **Mental Bridging:** Prompts the user to mentally "step into" the role model's shoes, feeling the confidence they observe.
- **Effectiveness Tracking:** Users can rate how impactful the visualization was. The AI tracks subsequent mindset and performance to infer correlation.

- **Contextual Triggering:**
  - **Coach Section (Library):** A dedicated section for Browse role models and initiating visualizations.
  - **Pre-Round Mental Prep:** Suggests visualizing a confident role model for composure on the first tee.
  - **Mid-Round Reset (Subtle):** If the user logs a negative mindset, the AI could briefly display a relevant role model image/GIF with a simple prompt: "Imagine [Role Model]'s composure here."
  - **Post-Round Debrief:** AI recommends role model visualization based on confidence insights from the round.
  - **AI-Prompted Learning:** "Given your desire for more consistent composure, consider visualizing [Role Model]'s calm demeanor during their pre-shot routine."

## **II. Content/Display Elements (Visual Emphasis):**

### **1. Role Model Profile Cards:**

- **Image/GIF:** High-quality portrait or action shot of the role model.
- **Name & Key Trait:** (e.g., "Rory McIlroy - Powerful Presence," "Annika Sörenstam - Unflappable Focus").
- **AI-Generated Rationale:** Brief explanation of why this role model is recommended for the user.

### **2. Visualization Session Screen:**

- **Role Model Image/GIF:** Displayed prominently at the top or as a subtle background.
- **Guided Prompts:** Large, clear text prompts, updated sequentially, focusing purely on visual emulation:
  - **"See** them walk to their ball, every step purposeful, shoulders back."
  - **"Observe** their eyes, calm and focused, as they look down the fairway."
  - **"Watch** their pre-shot routine: smooth, deliberate, unwavering."
  - **"Now, picture yourself** mirroring that exact posture and presence."

- **Minimalist UI:** No distractions, allowing full focus on mental imagery.

### 3. **User-Defined Role Model Input:**

- Text fields for user to input Name, and describe "What confident traits do they possess? (e.g., 'always calm under pressure,' 'great recovery after a bad shot')."
- Option to upload a personal photo of their role model (if user image upload is supported).

## **III. UI/UX Considerations:**

- **Intuitive Browse:** Easy navigation through the curated role model library.
- **Full-Screen Visualization:** Immersive mode for guided sessions.
- **Clear & Concise Prompts:** Text is easy to read and understand quickly.
- **Visual Quality:** High-resolution images and smooth GIFs are crucial for Visual learners.
- **"My Role Models" Section:** A place for users to save and revisit their chosen/ favorite role models.
- **"Did this help?" Feedback:** A simple interaction to rate the effectiveness of the visualization session.
- **Ethical Considerations:** Ensure role models are chosen respectfully and without implying endorsement if they are public figures. Focus on general traits (composure, focus) rather than specific individuals if licensing is an issue.
- **AI Explanation:** When the AI suggests a role model, clearly explain the rationale (e.g., "Based on your recent struggles with composure, visualize [Role Model]'s calm demeanor.").
