

FoCoCo.ai

Focus. Confidence. Control.

Project: App1 - GOLF

Subject: VARK - Control - (A) Aural - Verbal Course Planning

Version: 1.8.5

Prepared by: Dirk J. Delfortrie

Shared with: Imad Bouirmane

Date: July 8, 2025

FoCoCo Prime Tier: "Verbal Course Planning"

Feature Name: AI-Guided "Verbal Course Planning"

VARK Modality: Aural (A)

Pillar: Control (specifically for enhancing commitment to strategy, reinforcing proactive mental preparation, reducing indecision, improving course management through active verbalization, and building confidence in shot execution)

Description: A Prime-tier feature providing Aural learners with an interactive audio experience where they verbally walk through their strategy for the upcoming hole or shot. The FoCoCo AI Coach will provide targeted audio prompts, listening to the user's verbal responses to guide them through key strategic considerations (e.g., "What's your target off the tee?", "What's your plan if you miss left?"). By articulating their plan out loud, users actively engage their auditory processing, solidify their commitment to a chosen strategy, and strengthen mental control before execution, minimizing second-guessing and impulsive decisions.

I. Core Logic & AI Integration

- **Voice-to-Text & Natural Language Understanding (NLU):**
 - Captures user's voice input and converts it to text.
 - NLU processes the verbal responses to understand:
 - **Strategic Intent:** Identifies clubs, targets, shot shapes, and contingency plans.

- **Commitment Level:** Assesses confidence in verbalization (e.g., hesitant vs. decisive language).
 - **Completeness:** Checks if all critical aspects of a strategic plan are covered.
- **AI Strategy Knowledge Base Integration:**
 - Leverages the "AI-Narrated Strategy Explanations" and "Course Strategy Diagrams" data.
 - The AI knows the optimal strategy for a given hole/situation based on course data and user's profile.
- **AI-Guided Conversational Flow:**
 - **Prompt Generation:** The AI dynamically generates audio prompts based on:
 - The current hole/scenario.
 - The user's previous verbal responses.
 - Discrepancies between the user's stated plan and the optimal strategy.
 - User's historical tendencies (e.g., "You often get into trouble on the right side of this hole. How will you ensure your drive stays left?").
 - **Feedback & Refinement:**
 - **Verbal Affirmation:** If the user's plan aligns with optimal strategy, the AI provides positive audio reinforcement ("Excellent choice, that's a smart play!").
 - **Gentle Correction/Probing:** If the plan deviates or is incomplete, the AI uses gentle audio prompts to guide the user towards a better solution ("Consider the wind direction on this approach. How might that affect your club selection?", "What's your contingency if that shot doesn't go as planned?").
 - **Linking to Other Features:** AI can verbally recommend checking the "Course Strategy Diagram" or listening to an "AI-Narrated Strategy Explanation" for more detail.
- **Speech Synthesis (Text-to-Speech):** Converts the AI's generated textual responses into natural-sounding audio for the user.

II. Content/Display Elements (Aural Emphasis)

1. AI Coach Voice:

- **Consistent, Calm, and Authoritative:** The AI's voice should be perceived as a knowledgeable coach – supportive but guiding.
- **Natural Pacing and Intonation:** Designed to facilitate a comfortable, responsive conversation.

2. Verbal Prompt Library (Frameworks for AI Generation):

- **Opening Prompts for each hole type:** "On this par [X], what's your initial plan off the tee?"
- **Driving Prompts:** "What's your target line and club choice for this drive?", "What's your 'miss' strategy here?"
- **Approach Prompts:** "Considering pin position, where on the green are you aiming?", "What's your plan if you miss the green left/right/long/short?"
- **Short Game Prompts:** "How are you going to get this ball to the hole? Chip, pitch, or putt?", "What's your landing spot?"
- **Putting Prompts:** "What's your read here – break, speed?", "What's your focus point for this putt?"
- **Contingency Prompts:** "If that shot doesn't go as planned, what's your next move?"
- **Commitment Prompts:** "Are you fully committed to that plan?"

3. Verbal Feedback & Reinforcement (Frameworks for AI Generation):

- **Affirmations:** "Sounds like a solid plan!", "That's a smart approach given the conditions."
- **Probing for Detail:** "Can you elaborate on your target?"
- **Guiding Questions:** "Have you considered the slope around the green?"
- **Recap:** "So, to recap, your plan for this hole is [summarize plan]."

4. Background Audio (Optional):

- Very subtle, non-distracting ambient course sounds (e.g., distant birds, light breeze) to maintain context without interfering with the verbal exchange.

5. Minimal Visual Support:

- While primarily Aural, a simple visual element could indicate the AI is listening or speaking (e.g., a pulsating waveform icon or a "listening..." / "responding..." text overlay).
- The "Course Strategy Diagram" for the current hole could be displayed passively in the background, allowing the user to mentally map their verbal plan onto the visual.

III. UI/UX Considerations

- **Initiation:**
 - **Automatic Trigger:** AI automatically initiates planning session as user approaches the next tee box (e.g., "Ready to plan for Hole 7?").
 - **Manual Activation:** A clear "Plan Hole" button for user to initiate verbally.
- **Privacy:** Emphasize the private nature of the verbal interaction. Strongly recommend headphone use.
- **Responsiveness:** Low latency in speech-to-text and AI response generation is critical for a fluid conversational experience.
- **User Control:**
 - Ability to skip prompts.
 - Ability to end the session at any time.
 - Toggle for AI "guidance level" (e.g., minimal prompts vs. detailed review).
- **Discreet In-Round Use:** Designed for use while walking between shots or on the tee box, without holding up play. Conversation flow should be efficient.
- **Offline Capability:** Core strategic planning prompts and AI voice models should ideally be available offline.
- **Non-Judgmental Tone:** The AI's voice and responses should always be supportive, guiding, and encouraging, fostering a safe space for planning.
- **Learning & Iteration:** User feedback on helpfulness of verbal planning sessions can inform AI improvements.
- **Integration with Control Score:** The AI can analyze verbal planning adherence and quality, contributing to the user's overall "Control Score" and providing verbal feedback in post-round summaries.
