Focus. Confidence. Control.

Project: App1 - GOLF

Subject: VARK - Control - (K) Kinesthetic - Feel the Course Warm-up

Version: 1.8.5

Prepared by: Dirk J. Delfortrie

Shared with: Imad Bouirmane

Date: July 9, 2025

FoCoCo Prime Tier: "Feel the Course" Warm-up

Feature Name: AI-Guided "Feel the Course" Pre-Round Warm-up

VARK Modality: Kinesthetic (K)

Pillar: Control (specifically for enhancing body awareness, grounding, preparing for proprioceptive feedback, developing a connected swing feel, and fostering a confident, controlled start to the round)

Description: A Prime-tier feature providing Kinesthetic learners with a series of physical warm-up routines designed to deeply connect them to the feel of the ground, the golf club, and their own body before a round or practice session. These "Feel the Course" warm-ups go beyond generic stretches, focusing on movements that heighten sensory awareness—feeling the feet on the turf, the club's weight, and the rotational movement of the swing. By engaging in these specific actions, golfers can activate their proprioception, release pre-round tension, and establish a fluid, controlled feel for their game right from the first tee.

I. Core Logic & AI Integration

- **Warm-up Exercise Database:**
 - **Kinesthetic-Focused Movements:** A library of exercises prioritizing sensory feedback and movement patterns relevant to golf:
 - **Grounding:** (e.g., "Foot Presses," "Ankle Circles," "Weight Shifts," "Heel-Toe Rock"). Focus: Feeling connection to the ground.

- **Rotational Feel:** (e.g., "Torso Twists with Club," "Hip Swings," "Arm Swings with a Feel for Arc"). Focus: Feeling the core rotation and swing path.
- **Club Feel:** (e.g., "Club Swings with Controlled Pause," "Light Grip Pressure Swings," "Waggle Drills focusing on clubhead weight"). Focus: Feeling the clubhead and swing rhythm.
- **Tension Release:** (e.g., "Full Body Shakes," "Shoulder Rolls," "Jaw Wiggles"). Focus: Feeling physical relaxation.
- **Step-by-Step Instructions:** Clear, concise written instructions for each movement.
- **Key Kinesthetic Cues:** Specific prompts about *what to feel* (e.g., "Feel your weight shift from heel to toe," "Feel the clubhead lag behind your hands," "Feel the stretch through your side").
- **AI Personalization & Recommendation Engine:**
 - **Pre-Round Context:** Automatically suggests a "Feel the Course" warm-up before a scheduled round based on location (Portugal), time, and weather (if available), prompting the user for a quick 5-10 minute session.
 - **User Preferences & Feedback:** Prioritizes warm-up movements that the user has previously marked as effective or frequently used.
 - **Identified Weaknesses (from Performance/Control Data):** If AI detects specific tendencies (e.g., "poor balance," "rushed tempo," "lack of hip rotation"), it will recommend warm-up movements that directly address those areas.
 - Example: If the "Control Score" indicates issues with balance, the AI suggests more "Grounding" exercises. If "Swing Analysis" (future feature) shows a lack of rotation, it suggests "Rotational Feel" exercises.
 - **Time Customization:** Allows users to specify their available warm-up time, and the AI curates a routine of appropriate length.
- **AI Feedback & Reinforcement:**
 - **Post-Warm-up Check-in:** A quick prompt (e.g., "How connected do you feel to your swing now? (Much more / Slightly more / No change)") to gather user feedback.
 - **Correlation Analysis (Future):** If users log warm-up completion, the AI can analyze if performing the "Feel the Course" warm-up correlates with improved "Control Score" or specific performance metrics in the initial holes of a round.

II. Content/Display Elements (Kinesthetic Emphasis)

1. Exercise Display (Visual & Textual for Action):

- **Short Animated Gifs/Video Loops (Primary for Kinesthetic):** For each warm-up movement, a clear, looping visual demonstration. This allows Kinesthetic learners to immediately *see* and *mimic* the motion.
- **Concise Written Instructions:** Step-by-step text guiding the user through the movement, reinforcing the visual.
- **Prominent "Feel This" Cues:** Highlighted text instructing the user on the specific physical sensation or body part to focus on (e.g., "Feel the stretch in your hamstrings," "Feel the weight shifting in your feet," "Feel the tension release from your grip").
- **Timer/Progress Bar:** A visual timer showing the duration of each exercise or the overall warm-up, helping users stay on track.

2. Warm-up Routine Builder Interface:

- **"Build My Warm-up" Option:** Allows users to select individual exercises from the database, reorder them, and specify duration for each.
- **Pre-set Routines:** A few pre-designed routines (e.g., "Quick 5-min Feel," "Full 10-min Prep," "Balance Focus Warm-up") for immediate use.
- **"My Saved Routines" Section:** For users to access their customized warm-ups.

3. In-App Guided Session:

- The app displays one exercise at a time with its visual and instructions, progressing automatically or manually through the routine.
- Subtle background music (optional, user selectable) can be added to enhance the flow.

4. Integration with other Control Features:

- Direct links within the warm-up instructions to concepts in the "Control Pillar Knowledge Base" (e.g., "This movement enhances proprioception, learn more in our Knowledge Base").

III. UI/UX Considerations

- **Ease of Use On-Course:** Designed for practical use at the driving range or putting green. Visuals should be clear even in outdoor lighting.
- **Discreetness (where applicable):** Many movements are subtle enough to be done without drawing undue attention.
- **Clear & Simple Instructions:** Both visual and textual instructions must be unambiguous and easy to follow quickly.
- **Offline Availability:** All visuals, instructions, and routine definitions should be downloadable for offline use.
- **Battery Efficiency:** Optimize video/GIF playback for minimal battery drain.
- **Motivational & Encouraging Tone:** The language should be positive, emphasizing the benefits of preparation.
- **User Feedback:** A simple "How did this feel?" or "Was this effective?" prompt after completing a warm-up.
- **Integration with Round Tracking:** A prompt to initiate the warm-up can appear before a scheduled round.
- **Customization:** Empower users to create routines that genuinely fit their needs and time constraints.
