Focus. Confidence. Control.

Project: App1 - GOLF

Subject: VARK - Control - (K) Kinesthetic - Physical Reset Techniques

Version: 1.8.5

Prepared by: Dirk J. Delfortrie

Shared with: Imad Bouirmane

Date: July 9, 2025

FoCoCo Prime Tier: "Physical Reset Techniques"

Feature Name: AI-Guided "Physical Reset Techniques"

VARK Modality: Kinesthetic (K)

Pillar: Control (specifically for immediate tension release, physiological emotional regulation, breaking negative thought patterns through physical action, enhancing body-mind connection, and quickly regaining composure)

Description: A Prime-tier feature providing Kinesthetic learners with actionable steps for physical movements designed to release tension and quickly regain control after a poor shot, a frustrating moment, or during periods of high pressure. These "Physical Reset Techniques" leverage the body-mind connection, guiding users through discreet, simple movements like wringing hands, shoulder rolls, or purposeful walks. By engaging in these physical actions, golfers can interrupt negative emotional spirals, re-center their focus, and prepare their body for optimal performance, ensuring immediate control over their physical and mental state.

I. Core Logic & AI Integration

- **Technique Database:**
 - **Actionable Steps (Text/Visual):** A library of physical movements designed for quick, discreet execution on the golf course. Each technique includes:
 - **Name:** (e.g., "Tension Squeeze & Release," "Shoulder Drop," "Purposeful Walk," "Grounding Foot Press," "Hand Wring," "Jaw Release").

- **Step-by-Step Instructions:** Clear, concise written instructions for execution.
- **Benefit:** Brief explanation of how the technique helps (e.g., "Releases trapped tension," "Reconnects you to the present moment").
- **Key Kinesthetic Focus:** What the user should *feel* during the exercise.
- **Contextual Application:** Tags for when to best use each technique (e.g., "After a bad shot," "Before a difficult putt," "During slow play," "Feeling anxious").
- **AI Personalization & Recommendation Engine:**
 - **Emotional Thermometer Integration:** If the user logs specific emotions (e.g., "anger," "anxiety," "frustration") or physical sensations (e.g., "tight shoulders," "clenched jaw"), the AI recommends relevant physical reset techniques.
 - **Performance Data Correlation:** If the AI detects a pattern where a specific type of poor performance (e.g., "rushed swing after a bad bounce") is often preceded by reports of tension, it will suggest techniques for physical release.
 - **Journal Analysis (NLP):** If the user describes physical manifestations of stress in their journal (e.g., "my shoulders were up to my ears"), the AI suggests techniques addressing those specific areas.
 - **User Preference:** Tracks which techniques the user frequently accesses or marks as effective, prioritizing these in future recommendations.
- **AI Feedback & Reinforcement:**
 - **Post-Round Prompts:** The AI can prompt the user (via text or voice) to reflect on whether they used a physical reset technique and if it helped.
 - **Correlation Analysis (Future):** If users log usage of techniques, the AI can analyze if performing a specific physical reset correlates with improved performance on the subsequent shot or emotional state.

II. Content/Display Elements (Kinesthetic Emphasis)

1. Technique Display (Visual & Textual for Action):

- **Short Animated Gifs/Video Loops (Primary for Kinesthetic):** For each technique, a short, clear, non-distracting visual demonstration (looping GIF or

very short video) showing the movement. This allows kinesthetic learners to see and *mimic* the action.

- **Step-by-Step Written Instructions:** Concise text instructions accompanying each visual to reinforce the movement and provide detail. These are crucial for Kinesthetic learners who also benefit from reading action steps.
- **"Feel This" Text:** Highlighted text instructing the user on the specific sensation to focus on during the movement (e.g., "Feel the tension leave your shoulders," "Feel your feet rooted to the ground").

2. Technique Library Interface:

- **Thumbnail/Icon per Technique:** An easily recognizable icon or small image for each technique.
- **Categorization:** Group techniques by type (e.g., "Upper Body Release," "Grounding," "Movement-Based").
- **"Recommended for You" Section:** Prominently displays AI-curated techniques.
- **"My Favorite Techniques" Section:** Allows users to bookmark their most effective resets.

3. In-Round Quick Access:

- A prominent, easily accessible button on the in-round screen (e.g., "Quick Reset") that opens a carousel or list of the user's favorite or AI-recommended physical reset techniques.
- The visual (GIF/video) and brief text should be immediately apparent for quick application.

4. Integration with other Control Features:

- **"If-Then Plans":** When creating an "If-Then" plan, the "Then" section can offer a quick link to browse "Physical Reset Techniques" as a response.
- **"Mental Reset Checklists":** Checklist items can include physical actions, linking back to the detailed technique.

III. UI/UX Considerations

- **Quick Access:** Design for minimal taps and rapid comprehension during a round.
- **Discreetness:** Techniques are generally subtle enough to be performed on the course without drawing undue attention. The visuals should reinforce this.
- **Clarity & Simplicity:** Instructions (both visual and textual) must be unambiguous and easy to follow.
- **Offline Availability:** All technique visuals and instructions should be downloadable for use without an internet connection.
- **Battery Efficiency:** Optimize video/GIF playback for low battery consumption during a round.
- **Non-Judgmental Tone:** The language and visuals should be supportive and empowering, framing these techniques as tools for control, not as a sign of weakness.
- **User Customization:** Allow users to flag techniques as "most effective" or create their own short sequences of movements.
- **Feedback Mechanism:** Simple way for users to indicate if a technique helped them in a given situation.
- **Integration with "Pre-Shot Routine":** Users could incorporate a specific physical reset technique into their personalized pre-shot routine.
