Date: July 9, 2025

FoCoCo Prime Tier: "Course Management Strategy Templates"

Feature Name: AI-Personalized "Course Management Strategy Templates"

VARK Modality: Read/Write (R)

Pillar: Control (specifically for proactive strategic planning, deliberate decision-making, objective risk assessment, reinforcement of course management principles, and post-round reflection on strategic adherence)

Description: A Prime-tier feature providing Read/Write learners with structured, customizable written templates for meticulous pre-round and in-round strategic planning. These "Course Management Strategy Templates" guide users to document their plan for each hole, including target lines, club selection, risk assessment, and contingency plans. By actively writing out their strategy, golfers solidify their commitment, reduce indecision under pressure, and create a valuable record for post-round analysis, reinforcing mental control and smarter play.

I. Core Logic & AI Integration

- **Template Database:**
 - **Per-Hole Templates:** Pre-designed templates for standard hole types (e.g., Par 3, Par 4, Par 5) and specific challenges (e.g., doglegs, water hazards, uphill/downhill greens).
 - **Strategy Components:** Each template includes specific fields for:
 - **Hole Number & Par:** Basic identifier.

- **Key Obstacles/Hazards:** List prominent challenges (e.g., "Bunker left," "Water right," "OB long").
 - **Target Off Tee:** Club, aim point, desired landing area (e.g., "Driver, right side of fairway, 240y").
 - **Approach Shot Plan:** Club, aim point, green section, preferred miss (e.g., "7 Iron, front-left of green, miss right").
 - **Contingency Plan:** What to do if the primary shot doesn't execute (e.g., "If drive misses left, lay up short of bunker").
 - **Risk Assessment:** Simple scale (e.g., Low, Medium, High) for each shot, with a brief justification.
 - **Emotional Triggers (Optional):** Space to note potential emotional hot spots on the hole.
 - **Key Mental Focus:** 1-2 words for mental state (e.g., "Commit," "Smooth," "Patient").
- **AI Personalization Engine:**
 - **User Profile Integration:** Automatically pre-populates fields based on user's known data (e.g., club distances, common miss tendencies, handicap).
 - **Course Data Integration:** Pulls in hole details (length, par, hazards) from the FoCoCo course map database.
 - **"Suggested Strategy" Pre-fill:** The AI can pre-fill sections of the template with suggested optimal strategies based on the "AI-Narrated Strategy Explanations" logic, acting as a starting point for the user to edit or accept. This provides a clear "read" element for Read/Write learners before they "write" their modifications.
 - **Weakness-Based Prompts:** If the AI identifies recurring strategic errors in past rounds (e.g., "too aggressive on par 5s," "poor recovery from deep rough"), it prompts the user to specifically address these in the current plan.
- **AI Plan Analysis & Feedback (Post-Submission):**
 - **Consistency Check:** AI reviews the user's documented plan for internal consistency and alignment with optimal strategy.
 - **Risk Evaluation:** Provides written feedback on the overall risk level of the plan, highlighting any areas of high unjustified risk.
 - **Comparison to Actual Play:** After the round, the AI compares the *documented plan* to the *actual shots played*, providing written feedback on adherence and the consequences of deviations (e.g., "Your plan was to lay

up on Hole 12, but you went for it and found the water. Reflect on this decision.").

- **Recommendation for Improvement:** Based on analysis, the AI suggests written drills or further study of "Course Strategy Diagrams" or "Decision Flowcharts."

II. Content/Display Elements (Read/Write Emphasis)

1. Interactive Digital Templates:

- **Structured Text Fields:** Clearly labeled input fields for each strategic component.
- **Dropdowns/Checkboxes:** For standardized selections (e.g., club choice from user's bag, risk level, common miss directions).
- **Pre-filled Text:** AI-suggested content displayed as editable text, allowing users to read and then modify.
- **"Add Notes" Section:** Free-form text area for additional thoughts or reflections.
- **Save/Print Functionality:** Users can save their completed plans digitally within the app and/or print them out for physical reference on the course.

2. Template Library & Selection:

- **List of Template Types:** Clearly listed templates (e.g., "Standard Hole Planning," "Trouble Shot Planning").
- **"Create New Plan" Button:** Intuitive button to start a new strategy document.
- **"My Saved Plans" Section:** Chronological list of previously saved strategy documents.

3. Post-Round Plan Review Interface:

- **Side-by-Side Comparison:** Visually display the "Planned Strategy" alongside the "Actual Shots Played" (using text and simple graphics).
- **AI Written Feedback Panel:** A dedicated section displaying AI's analysis of plan adherence, strategic insights, and recommendations.
- **Highlighting Discrepancies:** Clearly highlight (e.g., bold text, different color) where the actual play deviated from the planned strategy.

4. **Integration with Other VARK Features (Textual Links):**

- Links within the template or feedback to related "Course Strategy Diagrams" (Visual) or "AI-Narrated Strategy Explanations" (Aural) for deeper learning.
- Prompts to create a "Emotional Regulation Journal" entry reflecting on challenges faced during strategic adherence.

III. UI/UX Considerations

- **Readability:** High contrast, clear fonts, and organized layout for easy reading of prompts and written plans.
- **Ease of Writing:** Responsive text input fields, auto-save functionality, and intuitive navigation between holes/sections within a plan.
- **Structured yet Flexible:** Provide enough structure to guide planning but allow for free-form notes and customization.
- **Pre-Populated Data:** Leverage AI to pre-fill as much data as possible, reducing manual input and making the process efficient for the user.
- **Version Control (Optional):** If a user creates multiple plans for the same hole/round, allow them to view and compare versions.
- **Privacy:** Emphasize that plans are private to the user.
- **Offline Capability:** Allow users to create and review plans offline.
- **Motivation:** Frame the planning as a powerful tool for control and improvement.
- **Integration with "Control Score":** The consistency of documented planning and adherence to that plan could contribute to the "Strategic Control" sub-score,
- **Printable Output:** Ensure the formatted output is clean and practical for printing, as some R/W learners prefer physical copies.
