Date: July 9, 2025

FoCoCo Prime Tier: "Emotional Regulation Journal Prompts"

Feature Name: AI-Guided "Emotional Regulation Journal Prompts"

VARK Modality: Read/Write (R)

Pillar: Control (specifically for enhancing self-awareness of emotional patterns, fostering cognitive processing of challenges, developing proactive emotional management strategies, and promoting accountability through written reflection)

Description: A Prime-tier feature providing Read/Write learners with structured, AI-generated written prompts to reflect deeply on their emotional responses during a golf round or practice session. These "Emotional Regulation Journal Prompts" guide users to identify triggers, analyze the impact of their emotions on performance, and articulate specific strategies for better control in future situations. By regularly engaging in this written introspection, golfers can solidify their understanding of their mental game, process challenging experiences, and reinforce their commitment to emotional mastery.

I. Core Logic & AI Integration

- **Prompt Database:**
 - **Categorized Prompts:** A comprehensive library of written prompts categorized by emotional challenge (e.g., Frustration, Anxiety, Anger, Disappointment, Overconfidence), specific golf situations (e.g., After a bad drive, Before a crucial putt, Dealing with slow play), and control strategies (e.g., Identifying Triggers, Reframing Thoughts, Planning for Resilience).
 - **Varying Depth:** Prompts range from quick reflection (e.g., "What was the dominant emotion on Hole 5?") to deeper analysis (e.g., "Describe a specific

moment where you felt [emotion]. What did you *feel* in your body? What thoughts were running through your mind?").

- **AI Personalization Engine:**

- **Emotional Thermometer Integration:** If the user has logged specific emotional spikes via the "Emotional Thermometer," the AI suggests journal prompts tailored to those emotions and the holes/situations where they occurred.
- **Control Score Analysis:** A low "Emotional Control" sub-score (from the "Control Score" Visuals) would trigger prompts focused on identifying and addressing emotional leaks.
- **Performance Data Correlation:** If the AI identifies a pattern (e.g., "high scores often follow moments of reported frustration"), it generates prompts encouraging the user to explore the emotional root of that performance dip.
- **Previous Journal Analysis (NLP):** The AI utilizes Natural Language Processing (NLP) to analyze past journal entries, identifying recurring emotional themes, triggers, or strategies mentioned. It then generates follow-up prompts or prompts that help the user delve deeper into these recurring patterns.
 - Example: If the AI detects frequent use of words like "should have" or "can't believe" after a mistake, it might prompt: "Reflect on a recent moment of self-criticism. What specific 'shoulds' or 'coulds' were present in your mind? How did those thoughts impact your next shot?"
- **Progressive Prompts:** As the user demonstrates mastery over certain emotional areas, the AI can introduce more advanced reflection prompts.

- **AI-Guided Reflection & Action Planning:**

- **Summarization (AI-generated):** The AI can (optionally) provide a concise summary of the user's written entry, highlighting key emotions or insights.
- **Actionable Next Steps:** Based on the written reflection, the AI suggests specific "Control" pillar techniques or further exercises for emotional management (e.g., "Based on your reflection, consider practicing 'Guided Breathing Exercises' before your next round to manage pre-round anxiety.").

II. Content/Display Elements (Read/Write Emphasis)

1. Journaling Interface:

- **Clean, Uncluttered Design:** Focus on readability and ease of writing.
- **Prompts Display:** Clear, bold display of the current journal prompt at the top of the entry field.

- **Text Editor:** Standard text editing features (bold, italics, bullet points for structure) for ease of expression.
 - **Date & Time Stamp:** Automatic timestamping for each entry.
 - **Keyword Tagging (User/AI):** Users can add their own tags (e.g., #frustration, #putting) or the AI can suggest tags based on NLP analysis of the entry.
2. **Prompt Library & Selection:**
- **Categorized List of Prompts (Text):** Users can browse and select prompts based on specific emotional challenges or control topics.
 - **"Recommended Prompts" Section (Text):** Prominently displays AI-curated prompts based on user data.
 - **"Quick Reflection" vs. "Deep Dive" Options (Text):** Clearly labeled prompt types for varying levels of engagement.
3. **Journal Review & Analysis:**
- **Chronological Display:** Easy navigation through past journal entries.
 - **Search/Filter Functionality:** Ability to search entries by keyword, date, or AI-generated tags.
 - **AI-Generated Summaries (Text):** A concise, written summary provided by the AI after an entry is submitted (optional toggle).
 - **"Insights from Your Journal" Section:** Textual summaries of recurring emotional patterns or progress over time, derived from NLP analysis of multiple entries.
4. **Integration with Other Features (Textual Links):**
- Within the journal interface, clear textual links to relevant "Control" pillar features (e.g., "Want to work on this? Check out 'Self-Talk for Composure'").

III. UI/UX Considerations

- **Readability:** High contrast text, clear font choices, and appropriate line spacing to enhance the reading experience.

- **Ease of Writing:** Responsive text input, spellcheck, and basic formatting options. Keyboard access should be optimized.
- **Prompt Clarity:** Prompts must be unambiguous and encourage genuine reflection, not just yes/no answers.
- **Privacy:** Emphasize the private nature of the journal entries.
- **Backup & Sync:** Ensure journal entries are securely backed up and synced across devices.
- **Motivation & Encouragement:** The interface should feel supportive and empowering, encouraging consistent journaling. Positive affirmations can be displayed after an entry is saved.
- **Accessibility:** Ensure text size is adjustable and the interface is navigable for users with various needs.
- **Integration with "Emotional Thermometer":** A prompt to "Journal about it" can appear after a user logs an intense emotion on the thermometer.
- **Export Functionality (Optional):** Allow users to export their journal entries for personal keeping.
