FoCoCo Prime Tier: "If-Then" Plans

Feature Name: AI-Guided "If-Then" Contingency Plans

VARK Modality: Read/Write (R)

Pillar: Control (specifically for proactive emotional regulation, pre-emptive problem-solving, reducing impulsive reactions under pressure, building mental resilience, and automating positive responses to adversity)

Description: A Prime-tier feature providing Read/Write learners with structured written exercises to create "If-Then" contingency plans for common challenging golf situations. Users will identify specific triggers (the "If") and pre-determine their desired mental and behavioral responses (the "Then"). By writing out these predetermined plans, golfers can hardwire constructive reactions, minimize emotional fallout from bad shots or frustrating events, and maintain a consistent state of control, effectively "rewriting" their automatic responses to adversity.

I. Core Logic & AI Integration

- **"If" Scenario Database:**
 - **Common Golf Challenges:** A comprehensive library of "If" scenarios (triggers) that commonly lead to a loss of control in golf:
 - "If I hit my ball into a bunker..."
 - "If I three-putt a short putt..."
 - "If I hit an out-of-bounds shot..."
 - "If play slows down significantly..."

- "If I feel a surge of anger/frustration..."
- "If I miss a short putt..."
- "If I hook/slice my drive badly..."
- "If my playing partner is distracting..."
- "If I feel anxious on the first tee..."
- **Varying Severity:** Scenarios cover a range from minor annoyances to significant setbacks.
- **"Then" Response Library (Mapped to Control Strategies):**
 - A library of constructive "Then" responses, directly linked to other "Control" pillar features and general mental game principles:
 - **Breathing:** "...then I will take one deep 'Box Breath'." (Links to Guided Breathing)
 - **Self-Talk:** "...then I will silently repeat 'Next shot, stay present'." (Links to Self-Talk)
 - **Reframing:** "...then I will acknowledge the frustration, then ask myself 'What's the smart play *now*?'" (Links to Inner Dialogue)
 - **Physical Reset:** "...then I will walk with purpose to my ball, head up." (Links to Body Language Cues)
 - **Strategic Adjustment:** "...then I will pull out my yardage book and re-evaluate my next shot without emotion." (Links to Course Management Templates)
 - **Visualization:** "...then I will visualize a calm, confident recovery shot." (Links to Visualization for Calm/Consequence Viz)
- **AI Personalization & Recommendation Engine:**
 - **Emotional Thermometer & Journal Analysis:** If the AI detects recurring negative emotional responses to specific situations (e.g., "always get angry after a fat shot"), it recommends an "If-Then" exercise for that exact scenario.
 - **Performance Data:** If the user frequently makes strategic errors immediately following a bad shot, the AI suggests "If-Then" plans for managing the aftermath of poor execution.
 - **"Control Score" Hotspots:** If the "Control Score" consistently dips on certain hole types or after particular events, the AI suggests relevant "If-Then" scenarios.

- **Progressive Difficulty:** As users master basic "If-Then" plans, the AI can introduce more complex scenarios or encourage multi-step "Then" responses.
- **AI-Suggested "Then" Responses:** For each "If" scenario, the AI can provide 1-3 suggested "Then" responses based on best practices and the user's past successful strategies, which the user can read and then adapt or use directly.
- **AI Review & Feedback:**
 - **Completeness & Clarity Check:** AI can analyze the user's written "If-Then" plans for clarity and logical flow.
 - **Adherence Tracking (Future):** In a future iteration, if users verbally log when they used an "If-Then" plan, the AI could track adherence and provide feedback on effectiveness.
 - **Reinforcement:** Provides written reinforcement of the benefits of proactive "If-Then" planning.

II. Content/Display Elements (Read/Write Emphasis)

1. "If-Then" Exercise Interface:

- **Clear Headings:** "IF (Trigger/Situation):" and "THEN (My Predetermined Response):"
- **Text Input Fields:** Dedicated fields for users to type in their specific "If" scenarios and "Then" responses.
- **AI-Suggested "Then" Responses:** Pre-populated, editable text fields with AI-generated suggestions that users can read, modify, or accept.
- **Drag-and-Drop/Reorder:** If multiple "Then" steps, allow users to reorder them easily.
- **"Add New Plan" Button:** To create a new "If-Then" pair.

2. "If-Then" Library/Review:

- **List View:** Display all created "If-Then" plans in a clear, organized list (e.g., "If: Hit into Bunker, Then: 1 Deep Breath").
- **Detail View:** Tapping on a plan opens its full "If-Then" written content.
- **Search/Filter:** Ability to search for specific scenarios or responses.

- **"Practice This Plan" Button:** To jump to a simulated practice environment (could be just a text-based prompt, or linked to future interactive elements).

3. Educational Content (Text):

- **"Why If-Then Plans Work":** Short article or infographic explaining the psychological benefits (e.g., pre-committing, reducing cognitive load, habit formation).
- **Tips for Effective "If-Then" Plans:** Guidance on making plans specific, actionable, and positive.

4. Integration with other "Control" features:

- Textual links to related strategies within the "Then" section (e.g., a link to "Guided Breathing Exercises" if the "Then" involves a breath technique).
- Prompts to include specific elements from "Self-Talk" or "Body Language Cues" within the "Then" statement.

III. UI/UX Considerations

- **Readability:** High contrast, clean fonts, and logical layout to make reading and writing the plans easy.
- **Ease of Writing:** Responsive text input fields, auto-save, and easy navigation between "If" and "Then" sections.
- **Structured Guidance:** The template structure inherently guides the user, making the exercise less daunting.
- **Empowering Tone:** The language should be empowering, framing these plans as tools for mastery and control.
- **Accessibility:** Ensure text size is adjustable and the interface is navigable for diverse users.
- **Searchability:** Allow users to easily find specific plans they've created.
- **Offline Access:** Allow users to create, review, and modify "If-Then" plans offline.
- **Printable Output:** Provide an option to print out a consolidated list of "If-Then" plans for physical reference on the course.
- **Reinforcement:** In post-round analysis, the AI could display a reminder of specific "If-Then" plans relevant to challenging situations encountered, and ask the user (via text) to reflect on whether they executed their plan.
