Focus. Confidence. Control.

Project: App1 - GOLF

Subject: VARK - Control - (R) Read/Write - Learning from Mistakes

Version: 1.8.5

Prepared by: Dirk J. Delfortrie

Shared with: Imad Bouirmane

Date: July 9, 2025

FoCoCo Prime Tier: "Learning from Mistakes (Written)"

Feature Name: AI-Guided "Mistake Analysis & Control Lessons" (Written Journaling)

VARK Modality: Read/Write (R)

Pillar: Control (specifically for fostering objective self-assessment, transforming negative experiences into learning opportunities, enhancing cognitive reframing skills, building emotional resilience, and developing proactive strategies to prevent future errors)

Description: A Prime-tier feature providing Read/Write learners with structured journaling prompts designed to facilitate a deep, non-judgmental analysis of their golf mistakes. Instead of dwelling on frustration, users will follow a guided written process to dissect what happened, identify emotional and strategic control breakdowns, and extract actionable lessons. This "Mistake Analysis & Control Lessons" journaling helps golfers develop a healthier relationship with errors, strengthen their problem-solving skills, and proactively build strategies for greater control in similar situations.

I. Core Logic & AI Integration

- **Prompt Structure for Mistake Analysis:**
 - A pre-defined template of written prompts designed to guide a user through a systematic, non-judgmental analysis of a specific mistake. The prompts move from description to emotional response, to root cause, to lesson learned, and finally to future strategy.
 - **Core Prompt Flow:**
 1. **Describe the Event Objectively:** "What happened? (Just the facts, no judgment)."

2. **Identify Initial Reaction:** "What was your immediate emotional/mental response?"
3. **Analyze Control Breakdown:** "How did that emotion/thought impact your next action or decision? (e.g., 'Rushed next shot,' 'Lost focus')."
4. **Explore Root Cause (Control Focus):** "Was this a technical error, a strategic error, or a mental/emotional control breakdown? If mental/emotional, what triggered it?"
5. **Reframe & Extract Lesson:** "What is one *control-oriented* lesson you can take from this mistake, looking at it objectively?"
6. **Plan for Next Time (If-Then):** "How will you respond differently if this exact situation happens again? (Write an 'If-Then' statement)."

- **AI Personalization Engine:**

- **Performance Data Integration:** If the AI detects recurring specific types of mistakes (e.g., "consistent hooks on a particular hole," "repeated three-putts"), it recommends a "Mistake Analysis" journal prompt tailored to that exact scenario.
- **Emotional Thermometer & Control Score:** If a user logs a high emotional response to an event, the AI can trigger a prompt to analyze that specific mistake. Low "Control Score" segments in a round might prompt general mistake analysis.
- **Previous Journal NLP:** The AI analyzes past "Mistake Analysis" entries to identify recurring themes in *how* the user makes mistakes or *how* they recover (or don't recover) from them. It might then provide prompts to dig deeper into these patterns.
- **AI-Suggested "Lessons":** After the user completes their analysis, the AI can (optionally) provide 1-2 AI-generated "control-oriented lessons" based on its analysis of the user's input and their overall data, offering a different perspective.

- **AI Feedback & Actionable Recommendations (Written):**

- **Summarization:** The AI can summarize the key takeaways from the user's mistake analysis entry.
- **Pattern Highlighting:** "I noticed this is the third time you've identified 'rushing' as a response to a missed fairway. This suggests a pattern related to your pre-shot routine."
- **Linked Recommendations:** Provides explicit written recommendations to other "Control" pillar features based on the analysis (e.g., "To address the

'rushing,' review your 'Mental Reset Checklists' or practice 'Guided Breathing Exercises'').

- **Progress Tracking:** Tracks and reports (in "Emotional Control Performance Reports") how frequently users are engaging in mistake analysis and if it correlates with a reduction in recurring errors.

II. Content/Display Elements (Read/Write Emphasis)

1. "Mistake Analysis" Journaling Interface:

- **Structured Prompts:** Each prompt clearly displayed as a heading, with a dedicated text input field below it.
- **Guiding Text:** Brief, helpful text accompanying each prompt to ensure the user understands the focus (e.g., "Focus on observable facts, not self-blame.").
- **Pre-fill/Contextual Data:** The AI can pre-fill the "Describe the Event Objectively" field with a summary from the round tracking data (e.g., "Hole 5, second shot, pulled 7-iron into bunker").
- **Read-Only "AI Insights" Panel (Optional):** After submission, a dedicated section where the AI's summarized feedback and recommended lessons are displayed in text.
- **Save/Edit Functionality:** Clear buttons to save the analysis and edit it later.

2. Mistake Analysis Library/Review:

- **Chronological List:** All completed mistake analyses listed by date or specific golf event.
- **Search/Filter:** Ability to search past analyses by keywords, emotional triggers, or mistake types.
- **"View Analysis" Button:** To open and review a specific entry.
- **"Lessons Learned" Summary (Text):** A dedicated section or table consolidating all "control-oriented lessons" identified from past entries.

3. Educational Content (Text):

- **"The Power of Non-Judgmental Analysis":** A short article explaining the psychological benefits of analyzing mistakes objectively.
- **Examples of Effective Analysis:** (Optional) Anonymized examples of well-completed mistake analyses to guide users.

III. UI/UX Considerations

- **Readability & Clarity:** The prompts and the user's written entries must be easy to read with clear fonts, appropriate line spacing, and good contrast.
- **Ease of Writing:** Responsive text input, auto-save, and basic text formatting (bold, italics) to help users structure their thoughts.
- **Empathetic & Supportive Tone:** All written prompts and AI feedback must maintain a non-judgmental, encouraging tone. This is paramount for this sensitive feature.
- **Structured Guidance:** The sequential nature of the prompts provides a clear framework, reducing the cognitive load for the user when reflecting on a difficult experience.
- **Privacy:** Emphasize that these deeply personal entries are confidential.
- **Offline Access:** Users should be able to write and review analyses offline.
- **Integration with Other Features:**
 - A direct prompt to "Analyze this mistake" after logging a particularly poor shot or high negative emotion in the round tracker.
 - Seamless links from the "If-Then" plan feature to the "Plan for Next Time" section, allowing users to directly create an "If-Then" plan based on their mistake analysis.
 - Data feeds into the "Emotional Control Performance Reports."
- **Motivation:** Frame the feature as a powerful tool for growth and skill development, rather than a punitive review.
- **Progress Visualization (Textual):** In the long-term, show written trends like "Reduction in frequency of [specific mistake type] after engaging in X number of analyses."
