Project: App1 - GOLF

Subject: VARK - Control - (R) Read/Write - Mental Reset Checklists

Version: 1.8.5

Prepared by: Dirk J. Delfortrie

Shared with: Imad Bouirmane

Date: July 9, 2025

FoCoCo Prime Tier: "Mental Reset Checklists"

Feature Name: AI-Personalized "Mental Reset Checklists"

VARK Modality: Read/Write (R)

Pillar: Control (specifically for immediate emotional regulation, rapid cognitive reframing, structured distraction management, reinforcing positive habits under pressure, and quickly regaining composure after adversity)

Description: A Prime-tier feature providing Read/Write learners with concise, customizable written checklists designed for quick mental resets after a poor shot, a challenging hole, or any moment of emotional distress on the golf course. These "Mental Reset Checklists" guide users through a series of mental and physical actions to interrupt negative thought spirals, re-center focus, and prepare for the next shot with a clear mind. By engaging with these tangible, step-by-step lists, golfers can systematically regain control and prevent one bad moment from snowballing into a bad round.

I. Core Logic & AI Integration

- **Checklist Item Database:**
 - **Universal Reset Steps:** A library of proven mental reset techniques presented as concise, actionable checklist items:
 - "Acknowledge the feeling (without judgment)."
 - "Take a deep breath (e.g., Box Breath)."
 - "Shoulders down, jaw relaxed."
 - "Let go of the past shot."

- "Commit to the next shot fully."
- "Focus on one positive swing thought."
- "Visualize success for the next shot."
- "Remind myself of my 'If-Then' plan."
- "Walk with purpose."
- **Source Integration:** Each checklist item can be directly linked to a more detailed explanation from other Control pillar features (e.g., "Take a deep breath" links to "Guided Breathing Exercises").
- **AI Personalization Engine:**
 - **Emotional Thermometer & Journal Analysis:** If the AI detects recurring specific emotional responses to certain events (e.g., "anger after a penalty," "anxiety before a recovery shot"), it suggests relevant checklist items that directly address those emotions (e.g., if anger, prioritize "Acknowledge and Release," if anxiety, prioritize "Deep Breath").
 - **Performance Data:** If the AI identifies patterns where a specific type of error (e.g., "rushed follow-up shot after a bad drive") leads to further mistakes, it recommends checklist items targeting that specific breakdown (e.g., "Re-engage pre-shot routine fully").
 - **User-Defined Customization:** Users can select their preferred checklist items from the database, reorder them, and add their own personalized items (e.g., "Look at the top of the flagstick"). The AI can analyze the effectiveness of these custom items over time.
 - **AI-Suggested Checklists:** The AI can generate a "Recommended Reset Checklist" based on the user's historical data, providing a pre-populated template for them to review and adapt.
- **AI Adherence & Effectiveness Tracking (Future):**
 - **Self-Reported Usage:** Users can quickly mark in the app (or verbally in a future iteration) when they used a mental reset checklist.
 - **Correlation:** The AI can analyze if using a mental reset checklist correlates with an improvement in performance on the *subsequent* shot or hole, providing data-driven feedback on its effectiveness.
 - **Written Feedback:** Post-round reports can include written analysis of reset checklist usage and impact.

II. Content/Display Elements (Read/Write Emphasis)

1. Checklist Creation & Customization Interface:

- **"Add Item" Functionality:** A clear button to add items to a custom checklist.
- **Browse Item Library:** A scrollable list of pre-defined checklist items with short explanations (e.g., "Acknowledge the feeling: Recognizing emotion helps prevent it from taking over."). Users can read these and select.
- **Drag-and-Drop Reordering:** Intuitive way to arrange checklist items.
- **"Add My Own Item" Text Field:** For users to type in their unique reset steps.
- **"Save Checklist" Button:** To store customized lists. Users can name multiple checklists (e.g., "Post-Bad Shot Reset," "Anxiety Reset").

2. In-Round Checklist Display (Quick Access):

- **Clean, High-Contrast Text:** Designed for quick readability on the course.
- **Large Checkboxes/Tap-to-Check:** Intuitive interface for users to mentally (or physically) check off items as they perform them.
- **Minimalist Layout:** No distractions, just the checklist items.
- **One-Tap Access:** A prominent button on the main in-round screen to quickly bring up the active reset checklist.

3. Checklist Library & Review:

- **List of Saved Checklists:** Organized list of all created "Mental Reset Checklists" with their names.
- **Performance Analytics (Textual Summaries):** For each checklist, a written summary of its historical effectiveness (e.g., "On average, using this checklist led to a 0.3 stroke improvement on the following hole.").
- **"Review My Checklists" Button:** To access this library.

4. Educational Text:

- **"Why Mental Checklists Work":** Short, concise written explanation of the psychological benefits (e.g., "Breaks the cycle of negativity," "Provides a structured response," "Builds confidence").

- **Tips for Effective Use:** Written guidance on when and how to deploy a checklist effectively.

III. UI/UX Considerations

- **Readability & Simplicity:** Crucial for in-round use. Text needs to be clear, concise, and easy to glance at quickly.
- **Ease of Use:** Minimal taps to access and interact with the checklist during a round.
- **Customization:** Empower users to create checklists that genuinely resonate with their individual needs and routine.
- **Offline Access:** Checklists should be fully accessible and usable offline on the course.
- **Printable Output:** Provide an option to print out customized checklists on a small card for physical reference, as many R/W learners prefer this.
- **Non-Judgmental & Supportive Tone:** All instructional text and AI feedback should be positive and encouraging.
- **Battery Life:** Optimize the feature to be battery-efficient, particularly during a round.
- **Integration with "Emotional Thermometer" & "If-Then Plans":**
 - The app could suggest pulling up a specific reset checklist if a user logs a high negative emotion on the thermometer.
 - "If-Then" plans can include a "Then: pull up my Mental Reset Checklist" step.
- **Progress Tracking:** Show written summaries of improved composure or performance after consistent checklist usage.
