Date: July 9, 2025

FoCoCo Prime Tier: "Scenario-Based Written Exercises"

Feature Name: AI-Guided "Control Scenarios: Write Your Response" Exercises

VARK Modality: Read/Write (R)

Pillar: Control (specifically for proactive mental preparation, applying learned control strategies in a simulated environment, developing problem-solving skills under imagined pressure, reinforcing strategic thinking, and building confidence in handling adversity)

Description: A Prime-tier feature providing Read/Write learners with a library of AI-generated short written scenarios that simulate common challenging situations on the golf course. For each scenario, users are prompted to write down, in detail, how they would mentally and emotionally maintain control, describe their thought process, and outline their strategic response. By regularly engaging in these "Control Scenarios," golfers can pre-wire effective mental strategies, solidify their understanding of emotional regulation principles, and practice their "If-Then" plans, all from the comfort of a reflective, written environment.

I. Core Logic & AI Integration

- **Scenario Database (Text-Based):**
 - **Categorized Scenarios:** A comprehensive library of short, engaging written scenarios that depict various golf challenges:
 - **Performance-Related:** "You just hit a perfect drive into the middle of the fairway, but your playing partner then shanks theirs OB and gets angry. Now it's your turn for the approach shot."

- **Environmental:** "A sudden heavy rain starts on the 15th hole, and your group is now behind pace."
- **Emotional Trigger:** "You've missed three short putts in a row, and frustration is boiling over as you approach the next green."
- **Strategic Dilemma:** "You're tied for the lead on the 18th, facing a 200-yard carry over water to a tucked pin. You know you can reach it, but a miss is a penalty."
- **External Distraction:** "There's a lot of noise from construction near the 9th green as you line up a crucial putt."
- **Specific Prompts within Scenario:** Each scenario is followed by structured prompts to guide the user's written response:
 - "Describe your initial thoughts and potential emotional response."
 - "What mental control strategy would you immediately employ?"
 - "What specific positive self-talk or breathing technique would you use?"
 - "How would you refocus your attention on the task at hand?"
 - "Outline your strategic decision-making process for the next shot."
 - "What is your 'If-Then' plan for this situation?"
- **AI Personalization Engine:**
 - **User Profile & Data Integration:** The AI selects or customizes scenarios based on:
 - **Identified Weaknesses:** If "Emotional Control Reports" or "Journal Entries" indicate struggles with specific emotions (e.g., anger, anxiety) or situations (e.g., missed putts, slow play), the AI prioritizes scenarios related to those challenges.
 - **Skill Level:** Scenarios can be tailored to handicap levels (e.g., more complex strategic dilemmas for lower handicaps, basic emotional regulation for beginners).
 - **Recent Events:** If the user recently experienced a particular challenge in a round, the AI might present a similar scenario for reflection and planning.
- **AI Analysis & Written Feedback:**

- **NLP for Strategy Identification:** The AI uses NLP to analyze the user's written response, identifying the mental strategies articulated (e.g., "identified 'reframing' and 'deep breathing'").
- **Alignment with Best Practices:** The AI compares the user's written strategy to established best practices within the "Control" pillar.
- **Constructive Feedback:** Provides written feedback, highlighting strengths and offering suggestions for improvement or alternative approaches (e.g., "Your plan to take a deep breath is excellent. You might also consider using a 'Mental Reset Checklist' to ensure full refocus." or "Your response correctly identifies the strategic risk. Did you consider leveraging a 'Strategic Decision Tree' for this type of shot?").
- **Integration with "If-Then" Plans:** If the user's response includes an "If-Then" statement, the AI can prompt them to add it to their formal "If-Then Plans" database.
- **Learning & Adaptation:** The AI learns from user responses to refine its scenario generation and feedback mechanisms.

II. Content/Display Elements (Read/Write Emphasis)

1. Scenario Exercise Interface:

- **Scenario Text:** The full scenario description displayed prominently at the top of the screen in clear, readable text.
- **Structured Prompts:** Each guiding question within the scenario is presented with its own dedicated, expandable text input field below it.
- **AI Guidance Text:** Small, subtle text hints within or beside input fields (e.g., "Think about your emotional thermometer here," "Refer to your self-talk phrases").
- **"Submit Response" Button:** To save the user's written strategy and trigger AI analysis.
- **"Next Scenario" Button:** To move to another exercise.

2. Scenario Library & Review:

- **List of Scenarios:** A clear, navigable list of available scenarios, possibly categorized by challenge type.
- **"My Completed Scenarios" Section:** A list of past exercises, allowing users to review their written responses and the AI's feedback.
- **Search/Filter:** Ability to search scenarios by keywords or challenge type.

3. **AI Feedback Display:**

- **Dedicated Panel:** A clear, readable section appearing after submission, containing the AI's written analysis and recommendations.
- **Highlighting:** AI can highlight (e.g., bold, italicize) key phrases or strategies identified in the user's response.

4. **Integration with Other Features (Textual Links):**

- Contextual hyperlinks within the AI feedback or scenario prompts to relevant "Control Pillar Knowledge Base" definitions, "If-Then Plans," "Mental Reset Checklists," etc.

III. UI/UX Considerations

- **Readability:** High-contrast text, clear fonts, and appropriate line spacing are essential for comfortable reading of scenarios and writing responses.
- **Ease of Writing:** Responsive text input, auto-save function, and basic text formatting options (e.g., bullet points) for structured responses.
- **Privacy:** Emphasize that responses are confidential and used solely for personalized improvement.
- **Non-Judgmental Tone:** All scenario descriptions, prompts, and AI feedback must be supportive, encouraging, and focused on learning and growth.
- **Offline Access:** All scenarios and the ability to write responses should be available offline.
- **Progress Tracking:** Users can see how many scenarios they've completed and perhaps an overview of the common strategies they tend to apply.
- **Motivation:** Frame these exercises as valuable practice sessions for the mind, similar to practicing on the range.
- **Flexible Engagement:** Allow users to complete exercises at their own pace, not necessarily in one sitting.
- **Printable Output:** Provide an option to print out scenarios and their written responses for physical review.
