Focus. Confidence. Control.

Project: App1 - GOLF

Subject: VARK - Control - (V) Visual - Consequence Visualization

Version: 1.8.5

Prepared by: Dirk J. Delfortrie

Shared with: Imad Bouirmane

Date: July 8, 2025

FoCoCo Prime Tier: "Consequence Visualization"

Feature Name: AI-Guided "Consequence Visualization" for Control

VARK Modality: Visual (V)

Pillar: Control (specifically for enhancing motivation for emotional regulation, improving strategic decision-making, reinforcing self-discipline, and fostering greater mental resilience by vividly anticipating outcomes)

Description: A Prime-tier feature providing Visual learners with AI-curated prompts to vividly visualize the potential consequences of their mental state and strategic decisions on the golf course. Users are guided to mentally "see" the positive outcomes of maintaining control (e.g., a calm, confident shot leading to a successful result) versus the negative outcomes of losing it (e.g., an angry reaction leading to a poor follow-up shot). By consistently practicing this mental contrasting, users build stronger motivation to stay in control, make smarter choices, and experience a direct impact on their performance.

I. Core Logic & AI Integration

- **Consequence Scenario Database:**
 - **Positive Outcome Scenarios:** Scripts and prompts guiding visualization of ideal outcomes (e.g., "See yourself hitting a perfect drive after taking a calming breath," "Visualize holing a crucial putt because you remained focused and committed").
 - **Negative Outcome Scenarios:** Scripts and prompts guiding visualization of sub-optimal outcomes (e.g., "Picture the result of rushing a shot in anger," "See how a loss of composure leads to a double bogey").

- **Contrast Scenarios:** Side-by-side or alternating prompts to visualize both the positive and negative consequences of a *single* decision point or emotional reaction.
- **Golf-Specific Context:** All scenarios are directly relevant to golf situations (e.g., pre-shot, after a mistake, on a pressure hole).
- **AI Personalization Engine:**
 - **User Performance Data Integration:** The AI leverages the user's historical data to personalize the scenarios:
 - **Common Mistakes:** If the user frequently slices their drive after getting angry, the negative visualization might specifically involve slicing a drive.
 - **Success Stories:** If the user has a recorded "perfect putt" from a past round, the positive visualization can reference the *actual feel* and *visual outcome* of that specific putt.
 - **Emotional Thermometer Data:** If the user often escalates from "Frustrated" to "Angry" after a particular type of shot, the AI can trigger a consequence visualization focused on that escalation.
 - **Real-time Context:** Can adapt scenarios based on current round factors (e.g., score, hole type, recent performance).
 - **Learned Behavior:** AI tracks which consequence visualizations are most effective in prompting behavior change for the individual user.
- **AI-Guided Prompting & Engagement:**
 - **Pre-emptive Prompts:** Before a known pressure situation (e.g., a challenging par 3, final few holes), the AI might suggest a quick positive consequence visualization.
 - **Reactive Prompts:** After a negative emotional log (from the "Emotional Thermometer") or a poorly executed shot, the AI can suggest a negative consequence visualization (to learn) followed by a positive one (to reset).
 - **Journal Integration:** If the user reflects on a loss of control in their journal, the AI can recommend a specific consequence visualization for that scenario.
 - **Feedback Loop:** After a visualization, the AI prompts users to reflect: "How did seeing that positive outcome feel?" or "Does visualizing the negative outcome make you more determined to stay in control?"

II. Content/Display Elements (Visual Emphasis)

1. Guided Visualization Session Interface:

- **Dynamic Visuals (Primary):** High-quality, impactful static images, subtle animations, or short video clips that set the scene for the visualization. These would shift between positive and negative imagery for contrast:
 - **Positive:** Images/animations of a ball flying perfectly, dropping into the cup, a confident golfer's posture, a calm expression, a triumphant fist pump.
 - **Negative:** Images/animations of a ball splashing in water, shanked shots, a golfer with a frustrated expression, a broken club, a steep scorecard.
- **Minimal Text Overlays:** Key words or short phrases to guide the visual focus (e.g., "See the Outcome," "Feel the Calm," "Avoid the Mistake").
- **Progress Indicator:** A subtle visual bar showing how far along the user is in the visualization sequence.

2. Audio Narration (Essential for Guidance):

- **Clear, Directive Voice:** Guiding the user through the mental imagery.
- **Tone Shift:** Subtle changes in tone to reflect the positive vs. negative scenarios, without being overly dramatic.
- **Vivid Descriptive Language:** "Picture the ball arcing towards the flag," "Feel the satisfying thud of perfect contact," "Now, see the frustration clouding your judgment," "Imagine the consequence of that rushed swing."
- **Pauses:** Strategic pauses for the user to fully immerse in the visual.

3. Scenario Selection / Library:

- **Visual Icons/Thumbnails:** Each consequence visualization scenario has a representative icon or thumbnail.
- **Short Descriptive Text:** 1-2 sentences on the scenario and its purpose (e.g., "Visualize the impact of staying calm on a difficult chip shot").
- **"Recommended for You" Section:** Visually highlights AI-suggested scenarios based on user data.

4. Post-Visualization Reflection & Tracking:

- **Visual Rating Scales:** Users rate the vividness of their visualization and its impact on their motivation/control using visual sliders or star ratings.
- **Goal Reinforcement:** Visually display a connection to the user's overarching "Control" goals (e.g., "This visualization strengthened your resolve to maintain composure for your goal of 0 three-putts per round").

III. UI/UX Considerations

- **Impactful Visuals:** The chosen imagery must be evocative and clearly differentiate between positive and negative consequences.
- **Seamless Transitions:** Smooth transitions between visual scenes or from a negative to a positive consequence.
- **Intuitive Controls:** Easy play/pause/skip functionality for the guided audio/visuals.
- **In-Round Discretion:** While some visualizations might be too involved for active play, shorter, more abstract versions could be quickly accessed. Pre-round and between-hole use is primary.
- **Personalization Options:** Allow users to "favorite" scenarios or provide feedback on which types of imagery resonate most.
- **Non-Judgmental Tone:** Even when presenting negative consequences, the overall tone should be constructive and focus on learning and motivation, not guilt or shame.
- **Offline Access:** All visual and audio content should be downloadable.
- **Integration with Other Features:** Direct links from the "Emotional Thermometer" or "Course Strategy Diagrams" to relevant consequence visualizations.
- **Educational Context:** Briefly explain the psychological power of consequence visualization in building self-control.
