Date: July 8, 2025

FoCoCo Prime Tier: "Control Zones" on Course Map

Feature Name: AI-Identified "Control Zones" on Course Map

VARK Modality: Visual (V)

Pillar: Control (specifically for proactive mental preparation, awareness of pressure points, strategic emotional regulation, and minimizing mental errors in critical areas of the course)

Description: A Prime-tier feature providing Visual learners with interactive course maps that visually highlight "Control Zones"—specific areas on each hole where mental and emotional control are most critical for optimal performance. Using color-coding, shading, or distinct markers, these zones guide users to anticipate pressure, activate control strategies, and minimize costly mistakes. By seeing these critical areas mapped out, users can mentally prepare before approaching them, enhancing their strategic awareness and consistent execution under pressure.

I. Core Logic & AI Integration

- **Course Map Integration:**
 - Leverages the existing high-resolution course maps from the "Course Strategy Diagrams" feature.
- **"Control Zone" Definition Database:**
 - **Common Control Zones:** Pre-defined critical areas common to golf courses:
 - **Tee Box (especially par 3s, narrow fairways, opening holes):** For managing first-tee jitters, commitment, and starting strong.

- **Landing Zones near Hazards:** Areas where accuracy is paramount to avoid penalties (e.g., narrow fairway landing areas with water/bunkers).
 - **Around the Greens (all shots < 50 yards):** Chipping, pitching, bunker shots, crucial for saving par or making birdie.
 - **Putting Green (especially inside 10 feet, lag putts):** For focus, commitment, and composure under pressure.
 - **Recovery Areas:** From deep rough, awkward lies, or penalty areas where strategic decision-making is key.
 - **Closing Holes (e.g., 16-18):** Where fatigue and score pressure often peak.
- **AI Personalization & Dynamic Highlighting:**
 - **User Performance Analysis:** The AI identifies *personal* "Control Zones" based on the user's historical performance data.
 - **High Bogey/Double Bogey Rate:** If a user consistently struggles on a particular type of hole or around specific hazards (e.g., frequently finds the right bunker on a specific hole), that area becomes a personalized "Control Zone."
 - **Mindset Log Correlation:** If the "Emotional Thermometer" frequently shows high anxiety/frustration in certain areas of the course (e.g., "always feel stressed around this water hazard"), the AI marks that as a personal control zone.
 - **Shot Dispersion Data:** If a user's typical miss puts them in a specific problematic area, that area is highlighted.
 - **Real-time Context:** The AI can dynamically adjust the emphasis of control zones based on current round factors:
 - **Score:** If the user is having a great round, the AI might highlight "Protecting the Score" zones on closing holes.
 - **Match Play:** If in a tight match, specific holes or shot types might become heightened control zones.
- **AI-Triggered Control Strategy Recommendations:**
 - When the user approaches a defined "Control Zone" on the course (via GPS integration), the AI can proactively:
 - Display a visual alert on the map or a subtle notification.

- Suggest a specific "Control" pillar technique (e.g., "Approaching a critical Control Zone around the green. Consider a 'Visualization for Calm' before your chip," or "High pressure putt ahead in this Control Zone. Remember your 'Decision Flowchart' for the read.").
 - Link directly to relevant content (e.g., "Body Language Cues for Composure: Before a Crucial Putt").
- **Post-Round Control Zone Analysis:**
 - The AI summarizes the user's performance *within* their identified control zones.
 - Compares performance inside vs. outside control zones.
 - Provides insights on whether the user effectively managed their mental state in these areas.

II. Content/Display Elements (Visual Emphasis)

1. Course Map Overlay:

- **Distinct Highlighting:** "Control Zones" are visually highlighted directly on the existing course map/diagrams.
 - **Color-Coding:** (e.g., a subtle red or orange shading for general critical areas, a more intense color for personalized, high-frequency "problem" zones).
 - **Pattern/Texture:** A cross-hatch or dotted pattern could be used to differentiate from other map elements.
 - **Zone Labels:** Small, clear text labels identifying the zone (e.g., "Short Game Control," "Tee Shot Focus").
- **Dynamic Markers:** As the user moves through the course, "Control Zones" relevant to their current location are more prominently displayed or highlighted.
- **Interactive Toggles:** Users can toggle "Control Zones" on/off the map display.
- **"Tap for Strategy" (Prime Differentiator):** Tapping on a highlighted Control Zone on the map brings up a concise summary of *why* it's a control zone and recommended Control techniques for that area (e.g., "This is a key scoring zone. Focus on your pre-shot routine and 'Commitment Swing'").

2. Pre-Round "Control Zone Preview":

- A dedicated section within the pre-round routine allowing users to visually scroll through all the "Control Zones" on the upcoming course.
- Offers a mental walk-through of the critical areas.

3. Post-Round "Control Zone" Performance Report:

- **Visual Scorecard Overlay:** A visual scorecard that uses the "Control Zone" highlighting to show how the user performed in those specific areas (e.g., green dot for good play in a zone, red dot for poor play).
- **Summary Charts:** Bar charts showing average scores or key stats (e.g., putts, up-and-downs) specifically *within* Control Zones vs. non-Control Zones.
- **Personalized "Hot Spots":** Visually highlights the specific "Control Zones" that caused the most trouble in the recent round, based on shot tracking and mindset logs.

III. UI/UX Considerations

- **Clarity on Map:** The highlighting must be distinct but not overly intrusive, allowing the underlying course map details to remain visible.
- **Intuitive Toggle:** Easy on/off switch for the Control Zones overlay.
- **Proactive Alerts:** Subtle, timely visual notifications or audio nudges as a user approaches a Control Zone during a round.
- **Personalization Feedback:** Clearly communicate *why* certain zones are highlighted for *them* (e.g., "This is a Control Zone for you due to your past struggles with water hazards here.").
- **Actionable Links:** Every Control Zone highlight should have an immediate link to relevant "Control" techniques to apply in that situation.
- **Pre-Round Planning:** The feature should be a key part of the pre-round visualization and strategy planning.
- **Consistent Visual Language:** The color-coding and highlighting style should be consistent across all courses and reports.
- **Performance:** Fast loading of map overlays to avoid delays during a round.
- **Educational Tooltips:** Brief explanations of the concept of Control Zones and their importance.
