Focus. Confidence. Control.

Project: App1 - GOLF

Subject: VARK - Control - (V) Visual - Emotional Thermometer

Version: 1.8.5

Prepared by: Dirk J. Delfortrie

Shared with: Imad Bouirmane

Date: July 7, 2025

FoCoCo Prime Tier: "Emotional Thermometer" Visual

Feature Name: AI-Powered "Emotional Thermometer" Visual Tracker

VARK Modality: Visual (V)

Pillar: Control (specifically for emotional regulation, self-awareness, identifying triggers, and practicing mental resilience through visual feedback)

Description: A Prime-tier feature providing Visual learners with an intuitive, color-coded graphical scale to easily identify, log, and track their emotional state throughout a golf round or practice session. This "Emotional Thermometer" offers immediate visual feedback on emotional intensity, allowing users to quickly assess their state, recognize patterns, and prompt AI-guided control strategies. By seeing their emotional journey depicted visually, users gain enhanced self-awareness and better tools for emotional regulation on the course.

I. Core Logic & AI Integration

- **Emotional State Scale (Visual Design):**
 - **Scale Range:** A clear, intuitive scale, typically 1-5 or 1-10, representing emotional intensity from calm/optimal to frustrated/angry/anxious.
 - **Color Coding:** Progressive color scheme (e.g., cool colors like green/blue for optimal/calm, moving through yellow/orange for moderate frustration/anxiety, to red/dark red for high anger/distress).
 - **Emotion Labels:** Concise, relatable labels at key points on the scale (e.g., "Calm & Focused," "Slightly Annoyed," "Frustrated," "Angry," "Raging"). These can be customized or refined by the user over time based on common golf emotions.

- **Optional Emoji/Iconography:** Small, expressive icons or emojis alongside the labels to enhance visual understanding for rapid recognition.
- **Data Logging & Context:**
 - **In-Round Prompt:** The app prompts the user to log their emotional state at key intervals (e.g., after each shot, after each hole, after a marked "bad" shot, or upon user-initiated tap).
 - **Shot/Hole Correlation:** Automatically links the logged emotional state to the specific shot, hole, or time in the round.
 - **Qualitative Tagging (Optional):** After selecting a point on the thermometer, the user can optionally add quick tags like "missed putt," "chunked chip," "slow play," "great drive," to identify potential triggers.
- **AI Analysis & Insights:**
 - **Pattern Recognition:** The AI analyzes the user's logged emotional states over multiple rounds/sessions.
 - **Trigger Identification:** "Your emotional state frequently rises to 'Frustrated' after a 3-putt."
 - **Situational Trends:** "You tend to feel 'Anxious' on long par-3s."
 - **Performance Correlation:** "Your score averages X strokes higher when your emotional state goes above 'Slightly Annoyed' in the back nine."
 - **Personalized Feedback:** Provides visual summaries in the post-round debrief:
 - A line graph plotting emotional state against holes played.
 - Heatmap overlays on the course map indicating emotional hotspots.
 - **Predictive Nudging (Future):** Potentially, if integrated with other metrics (e.g., swing tempo from Kinesthetic biofeedback, or pre-shot routine consistency), the AI could anticipate a rising emotional state and proactively suggest a control strategy *before* the user explicitly logs it.
- **AI-Triggered Control Strategies:**
 - Based on the logged emotional state, the AI immediately suggests a relevant "Control" pillar feature.
 - If "Frustrated": "Time for a 'Quick Reset Breathing' exercise."

- If "Anxious": "Try a 'Visual Cue Focus' on your target."
- If "Angry": "Activate 'The Freeze Frame' visualization."
- These recommendations are context-aware and prioritize Visual (V) Control techniques for Visual learners.
-

II. Content/Display Elements (Visual Emphasis)

1. "Emotional Thermometer" Input Module (In-Round):

- **Prominent Visual Scale:** A clear, vertical "thermometer" or horizontal "slider" graphic.
- **Color Progression:** Visually distinct color changes corresponding to emotional intensity (e.g., cool to warm, green to red).
- **Clear Labels:** Concise emotional labels at intervals on the scale (e.g., "Zen," "Calm," "Slightly Up," "Frustrated," "Boiling").
- **Instant Feedback:** When the user taps a point on the scale, it visually registers immediately (e.g., the "mercury" fills up to that level, the selected section highlights).
- **Minimalist Design:** Designed for quick interaction with minimal taps, enabling in-round use without disrupting pace of play.

2. Post-Round Emotional Journey Visualizations:

- **Emotion-Over-Time Graph:** A line graph plotting the user's logged emotional state over the 18 holes, clearly showing fluctuations and peak moments. Color-coding of the line could correspond to the thermometer scale.
- **Round Summary Heatmap/Icons:** An overlay on the course map or scorecard showing emotional states per hole or per shot, using the color-coding or small emotion icons for quick visual summary.
- **Trigger Summary:** A visual word cloud or bar chart highlighting common triggers identified by the AI (e.g., "3-putts," "water hazards," "missed fairways").
- **Impact Correlation Visuals:** Simple graphs showing the correlation between emotional state and performance metrics (e.g., "Your putting average when 'Frustrated' vs. 'Calm'").

3. Educational Tooltips/Onboarding:

- Visual "walkthrough" of how to use the thermometer.

- Infographics explaining the impact of different emotional states on golf performance.

III. UI/UX Considerations

- **Rapid Interaction:** The primary goal is to make logging emotional states extremely fast and intuitive during a round. A single tap on the thermometer/slider should be sufficient.
- **Visual Clarity:** All graphical elements (colors, scales, icons) must be clear and easily distinguishable, even in varying light conditions.
- **Consistency:** Consistent use of colors and icons across the input module and post-round reports.
- **Discreet Integration:** The feature should be accessible quickly (e.g., a dedicated button or swipe gesture) but also not intrusive.
- **Customization:** Allow users to personalize the labels or even the specific colors on their thermometer if desired.
- **Progressive Disclosure:** Start with a simple scale, with options to delve deeper into specific emotion tagging if the user desires.
- **Motivational & Non-Judgmental:** The visuals and accompanying text should be supportive and focus on awareness and improvement, not judgment of emotional states.
- **Integration with Control Features:** A direct, visual link from a logged emotional state to a recommended control technique. (e.g., "You're at 'Frustrated.' Tap here for a quick visual calming exercise.")
- **Performance:** Ensure smooth animations and rapid loading to maintain flow during a round.
