Date: July 8, 2025

FoCoCo Prime Tier: "Visual 'Reset' Cues"

Feature Name: Personalized "Visual Reset" Cues

VARK Modality: Visual (V)

Pillar: Control (specifically for instant emotional regulation, breaking negative thought patterns, regaining focus, and initiating a positive mental state quickly during a round)

Description: A Prime-tier feature providing Visual learners with the ability to define and utilize personalized "Visual Reset" Cues—simple, observable visual triggers that, when seen, instantly prompt a mental and emotional reset on the golf course. These cues could be common golf course elements (e.g., a specific color, a unique tree, the top of a flagstick) or custom markers. By consciously associating these visuals with a desired state of calm and focus, users gain an immediate, discreet, and powerful tool to regain control after a bad shot, before a pressure situation, or anytime mental clarity is needed.

I. Core Logic & AI Integration

- **User-Defined Visual Cues:**
 - **Selection Interface:** Users are guided to select or define their visual cues. This could involve:
 - **Common Golf Elements:** A list of suggestions like "the top of the flagstick," "a specific cloud shape," "the line where the fairway meets the rough," "the color red on a hazard stake."

- **Customizable Markers:** Option to place a small, discreet, self-chosen visual sticker or marker on their glove, grip, or ball marker (with app guidance on placement).
- **Photo Capture:** The user can take a photo of a specific landmark on their home course (e.g., a unique tree, a specific bench) and designate it as a personal reset cue.
- **Association Training:** The app guides the user through a brief "anchoring" exercise to associate the chosen visual cue with a desired mental state (e.g., calm, focus, confidence). This involves looking at the cue while performing a deep breath and recalling a positive mental state.
- **AI Integration for Cue Management & Effectiveness:**
 - **Personalized Suggestions:** Based on the user's "Emotional Thermometer" data, "Control Score" trends, or journal entries indicating moments of lost control, the AI suggests specific scenarios where a "Visual Reset" Cue would be beneficial.
 - **Reinforcement Learning:** The AI prompts users to log whether using their visual reset cue was effective after moments of high emotional volatility. Over time, it can identify which cues and accompanying mental strategies work best for the individual.
 - **Contextual Reminders (Subtle):** If the user is identified as prone to losing composure on certain holes (from "Control Zones" data), the app might subtly remind them to "activate your Visual Reset Cue" as they approach that area, without being disruptive.
 - **Usage Tracking:** Monitors how often the user attempts to use their Visual Reset Cues and correlates it with subsequent performance/emotional state.
- **"Reset Routine" Integration:** The Visual Reset Cue is designed to be the *trigger* for a quick, personalized "reset routine," which could involve:
 - A deep breath (Kinesthetic/Auditory).
 - A positive affirmation (Auditory/Verbal).
 - A quick visualization of a calm state (Visual - from "Visualization for Calm").

II. Content/Display Elements (Visual Emphasis)

1. Cue Selection & Anchoring Interface:

- **Visual Prompts:** Images or simple animations guiding the user on how to choose and physically "anchor" their cue.

- **Descriptive Text:** Explaining the concept of a visual anchor and how to use it.
- **"Guided Setup" Walkthrough:** An animated step-by-step visual tutorial showing how to select a cue and perform the initial mental association.

2. In-App "Cue Library" / Reference:

- **User's Chosen Cues:** A visual display of the user's selected "Visual Reset" Cues (photos, icons).
- **Associated Reset Actions:** Next to each cue, visually list the simple actions it's meant to trigger (e.g., "Cue: Green Golf Tee. Action: Deep breath, Focus on Target.").

3. Educational Infographics/Diagrams:

- Simple visuals explaining the psychological principle behind visual anchors and habit formation.
- Diagrams showing how a visual cue interrupts a negative thought loop.

4. Post-Round Analysis & Feedback:

- **"Moments of Reset" Visual Timeline:** A timeline of the round showing when the user logged a moment of stress (via Emotional Thermometer) and when they reported using a "Visual Reset" Cue, alongside the subsequent emotional trajectory.
- **Effectiveness Charts:** Simple bar charts or spider diagrams visually representing the self-reported effectiveness of different "Control" strategies, including "Visual Reset" Cues.

III. UI/UX Considerations

- **Simplicity and Speed:** The core function is about quick, in-the-moment application. The in-round interaction should be minimal or non-existent, relying on the user's trained response to the external visual cue.
- **Personalization:** Emphasize the user's ability to choose cues that resonate with *them*.

- **Discreet Use:** The cues themselves are external and subtle; the app's role is in the training and reinforcement, not intrusive in-round pop-ups for the cue itself.
- **Clear Instructions for Training:** The setup and "anchoring" process needs very clear, step-by-step visual and textual guidance.
- **Reinforcement:** The app consistently reminds the user of the power of their chosen cues in pre-round warm-ups or post-round reviews.
- **Visual Consistency:** Use consistent imagery and design throughout the feature.
- **Seamless Integration:** Link from the "Emotional Thermometer" to a suggestion to "try your Visual Reset Cue" when stress levels rise.
- **Cross-VARK Appeal:** While Visual is primary, the accompanying breathing (Aural/Kinesthetic) or affirmation (Aural/Verbal) elements make it well-rounded for multi-modal learners.
