Focus. Confidence. Control.

Project: App1 - GOLF

Subject: VARK - Control - (V) Visual - MASTER List - Content

Version: 1.8.5

Prepared by: Dirk J. Delfortrie

Shared with: Imad Bouirmane

Date: July 8, 2025

Content for VARK (V) Visual - Control Pillar

1. "Emotional Thermometer" Visual

- **Emotional State Labels:**
 - List of 5-10 clear, concise emotional states (e.g., "Zen," "Calm & Focused," "Slightly Annoyed," "Frustrated," "Angry," "Raging," "Anxious," "Panicked").
 - Corresponding hexadecimal color codes for each state (e.g., #00FF00 for Zen, #FF0000 for Raging).
 - (Optional) Corresponding emoji or simple icon for each state.
- **Onboarding/Tutorial Text:** Short, clear text explaining how to use the thermometer and its benefits.
- **Post-Round Insight Text Templates:** Templates for AI-generated summaries (e.g., "Your emotional state frequently rose to [Frustrated] after [3-putts/missed fairways].").
-

2. "Course Strategy Diagrams"

- **Course Map Data Integration Plan:**

- Specify the source of your course map data (e.g., integration with a specific GPS provider like Golfshot, Arccos, or a plan to license/build your own database).
- Requirements for data fidelity (e.g., high-resolution satellite imagery, detailed elevation data, accurate hazard mapping).
- **AI Strategy Rulebook (Text/Logic):**
 - Detailed rules for AI to generate "ideal shot placements" based on:
 - User's typical driving distance & dispersion (e.g., if driver average is 250y, preferred landing zone is 240-260y).
 - User's common miss patterns (e.g., if user typically fades, suggest aim slightly left of target to compensate).
 - Hazard avoidance logic (e.g., prioritize lay-up distance if user's club max distance overlaps with hazard).
 - Pin positions (e.g., aiming for fat part of green if pin is tucked).
 - Elevation changes, wind conditions (if integrated).
 - Definitions for "Safe Line," "Aggressive Line," "Avoid Zone" (e.g., Safe Line = away from hazards + user's common miss).
- **Visual Elements:**
 - Hexadecimal color codes for "Safe Line," "Aggressive Line," "Avoid Zone," and "Ideal Landing Zones."
 - Iconography for hazards (bunkers, water, OB), pins, and tee boxes.
 - (Optional) Design specifications for animated dispersion cones.
- **UI Text:** Labels for measurement tools, club selector, save/load buttons.
- **Pre-Round/In-Round Prompts:** Text for AI prompts related to reviewing course strategy.

3. "Visualization for Calm"

- **Guided Imagery Scripts (Text):**

- **Minimum 5-10 unique scripts** (e.g., "The Serene Golf Course," "The Peaceful Lake," "The Mountain Peak Calm," "The Untroubled Fairway").
 - Scripts should be detailed, rich in *visual* sensory language.
 - Varying lengths (e.g., 2-min, 5-min, 10-min versions).
 - Scripts explicitly integrating golf pressure scenarios (e.g., "Visualizing a composed putt on 18").
- **Audio Narration:**
 - **Professional voice artist recordings** for all scripts.
 - Specify desired tone (calm, soothing, clear, directive).
 - (Optional) Background soundscapes (e.g., gentle waves, birdsong) - provide audio files (MP3/WAV) or specify type/source.
- **Background Visuals:**
 - **High-quality static images (JPG/PNG):** 1-3 images per script theme (e.g., serene golf course views, tranquil lakes, mountain vistas).
 - **Subtle animated video loops (MP4/GIF):** Short, calming, non-distracting abstract animations (e.g., slow ripples, gentle light transitions) to play during sessions.
- **UI Text:** Titles for each visualization, short descriptions, prompt text for post-session feedback ("How do you feel now?").

4. "Flowchart for Decision Making"

- **Decision Scenario Logic (Text/Flowchart Logic):**
 - Detailed logical breakdown for **at least 5-7 core golf decision scenarios**:
 - "Tee Shot Decision - Par 5" (Go for it/Lay up/Driver/3-wood)
 - "Approach Shot Over Water" (Go for it/Lay up short/Lay up long/Play safe side)
 - "Recovery from Deep Rough" (Go for green/Chip out/Play safe towards fairway)

- "Bunker Shot Strategy" (Hit to green/Blast out to safe area/Aim away from pin)
- "Chipping/Pitching Decision" (Chip/Pitch/Putt from fringe)
- "Trouble Shot Decision" (Punch out/Go for hero shot/Unplayable)
- For each scenario, provide:
 - Starting point statement.
 - All possible decision questions (Yes/No or Multiple Choice).
 - All possible action outcomes.
 - The logical connections (arrows) between questions and actions.
- **AI Personalization Rules (Text):**
 - Rules on how AI modifies flowchart paths based on user data (e.g., if user's success rate from sand < 20%, "Bunker Strategy" leans to chip out).
 - Rules for integrating real-time data (wind, pin position).
- **Visual Elements:**
 - Specifications for flowchart node shapes (oval for start/end, diamond for decision, rectangle for action).
 - Hexadecimal color codes for different node types or decision paths (e.g., green for recommended, red for high risk).
 - (Optional) Icons for clubs or shot types within action nodes.
- **"Explain Why" Content (Text):** Concise 1-2 sentence explanations for AI-driven recommendations at key decision points within the flowchart.
- **UI Text:** Labels for buttons ("Yes," "No," "Go Back," "Explain Why"), scenario titles.

5. "Body Language Cues for Composure"

- **Video Clips:**
 - **Minimum 10-15 short, high-quality video clips (MP4/GIF):** ~3-15 seconds each, looping.

- **Categories:** At least 3-5 clips for each scenario:
 - "After a Bad Shot (Composed Reaction)"
 - "Before a Crucial Putt (Calm Routine)"
 - "Walking Between Holes (Purposeful Stride)"
 - "Dealing with Adversity (Resilient Posture)"
 - "Confident Setup (Stillness)"
- **Focus:** Clearly demonstrating specific body language cues (e.g., head up, relaxed shoulders, controlled club return, neutral facial expression).
- (Optional) Slow-motion versions for some clips.
- **Still Images:**
 - **Minimum 10-15 high-resolution images (JPG/PNG):** Corresponding to key moments in the videos or as standalone examples.
 - **Annotation Points:** For each image, specify coordinates/areas to highlight (e.g., "shoulders relaxed," "eyes focused").
- **Descriptive Text:**
 - For each video/image: 1-2 sentences describing the specific body language cue and its mental/physical benefit.
 - (Optional) "Before & After" or "Pro vs. Amateur" comparison narratives (textual descriptions of the contrast).
- **AI Tagging Keywords:** For each clip/image (e.g., "Posture," "Gaze," "Movement," "Facial Expression," "Reset," "Resilience").
- **UI Text:** Titles for categories, prompt text for "Practice This."

6. "Consequence Visualization"

- **Visualization Scripts (Text):**
 - **Minimum 5-7 pairs of Positive/Negative consequence scripts.**

- Each pair should relate to a common golf scenario (e.g., "Putting Pressure," "Driving Accuracy," "Recovery Shot").
- Scripts must be rich in vivid *visual* imagery, contrasting the ideal outcome vs. the poor outcome due to control.
- Include emotional and performance elements in the description.
- **Audio Narration:**
 - **Professional voice artist recordings** for all scripts, with subtle tone shifts for positive/negative.
 - (Optional) Supporting background sounds for positive (e.g., birds chirping, cheers) and negative (e.g., distant splash, frustrated sigh).
- **Background Visuals:**
 - **High-quality static images (JPG/PNG) / Short animated video loops (MP4/GIF):**
 - **Positive Images/Animations:** Clear visuals of successful golf shots, calm expressions, triumphant moments, positive scores.
 - **Negative Images/Animations:** Clear visuals of mishits, balls in hazards, frustrated expressions, high scores.
 - Ensure smooth transitions between positive and negative visuals when used in contrast.
- **UI Text:** Scenario titles, short descriptions, feedback prompts after visualization ("How did seeing that positive outcome feel?").

7. "Mind-Body Connection Diagrams"

- **Infographics/Diagram Assets:**
 - **Minimum 5-8 unique, high-resolution infographics (PNG/SVG for scalability):**
 - "Tension Cycle" diagram (stress -> tension -> poor performance).
 - "Breathing & Nervous System" diagram (shallow vs. deep breathing effects).

- "Muscle Tension Hotspots" (visual of body highlighting common tension areas for golfers: shoulders, hands, jaw).
- "Fight or Flight Response" diagram (showing physiological effects of pressure).
- "Posture & Mental State" diagram (open vs. slumped posture effects).
- "Impact of Grip Pressure" diagram (too tight vs. optimal).
- **Visual Style Guide:** Consistent use of colors, icons, and arrows for cause-and-effect.
- (Optional) Simple animations for certain diagrams (e.g., a "stress" icon growing, then flowing into a "tension" icon).
- **Textual Explanations:**
 - **Short titles** for each diagram.
 - **Concise captions/labels** within the diagram.
 - **Detailed accompanying text (1-3 sentences)** explaining the scientific/physiological basis for the connection shown in each diagram.
 - (Optional) Text for interactive "hotspot" pop-ups.
- **Links to Control Features (Text):** Specify which "Control" techniques should be recommended from each diagram (e.g., "From 'Muscle Tension Hotspots' diagram, recommend 'Progressive Muscle Relaxation'").

8. AI-Generated "Control Score" Visuals

- **Score Calculation Logic (Detailed Specification):**
 - Provide the precise algorithm for calculating the "Control Score" (e.g., weighting for Emotional Thermometer spikes, Decision Flowchart adherence, Visualization usage, etc.).
 - Define the scale (e.g., 0-100, A-F grades).
 - Define thresholds for color coding (e.g., 85-100 = Green, 70-84 = Yellow, etc.).
- **Dashboard Widget Design Specs:**

- Visual mockups or wireframes for the main "Control Score" gauge/number display.
 - Visual mockups for sub-score widgets (Emotional, Strategic, Composure Execution).
 - Design for the overall trend line graph.
 - Design for per-hole score plot (line graph or bar chart).
 - Design for correlation visualizations (e.g., "Control Score vs. Handicap").
- **UI Text:** Labels for all widgets, sub-scores, timeframes ("Last Round," "Last 7 Days," "All Time").
 - **AI Insight Text Templates:** Templates for the AI to generate personalized summaries based on the Control Score (e.g., "Your Control Score dipped on holes [X, Y, Z] primarily due to [frustration/poor decision-making].").
 - **Actionable Recommendation Text:** Templates for AI to suggest next steps based on Control Score analysis (e.g., "Improve your Strategic Control by practicing with 'Decision Flowcharts'.").

9. "Visual Reset" Cues

- **Suggested Visual Cues (Text & Icons/Images):**
 - List of common golf course visual elements that can be used as cues (e.g., "Top of Flagstick," "A Specific Tree," "Water Hazard Edge," "Fairway Stripe"). Provide generic icons or images for these.
 - Instructions for users to upload custom photos if they choose a unique personal cue.
- **"Anchoring" Training Script (Text & Audio):**
 - Step-by-step instructions for the user to mentally associate their chosen visual cue with a calm/focused state.
 - Professional voice artist recording for the guided anchoring process.
- **"Reset Routine" Integration Text:**

- Short, simple text for the mental actions triggered by the cue (e.g., "Look at cue -> Deep breath -> Affirmation 'I am calm'").
- **Educational Text:** Explain the psychological principle of visual anchoring (1-2 sentences).
- **UI Text:** Prompts for selecting/customizing cues, feedback questions on effectiveness.

General Content Requirements:

- **Consistent Tone & Voice:** All text should be positive, encouraging, actionable, and non-judgmental.
- **File Naming Convention:** A clear, consistent naming convention for all video, audio, image, and text files.
- **Metadata:** Provide detailed metadata for each content piece, including AI tagging keywords, relevant categories, and any dependencies.
- **Accessibility Standards:** Ensure all content adheres to accessibility best practices (e.g., clear contrast for visuals, captions for videos, transcripts for audio).
- **Image/Video Quality:** All visual assets must be high-resolution and professionally produced.
- **Copyright/Licensing:** Confirm all assets (images, videos, stock audio) are properly licensed for commercial use within the application.
