FoCoCo Prime Tier: Self-Talk Prompts - Technical & Content Specification

Feature Name: AI-Recommended Self-Talk Prompts

VARK Modality: Aural (A)

Pillar: Focus (with strong connection to Confidence and Control)

Description: AI-generated and recommended key phrases or verbal cues (internal or externalized) designed to reinforce positive self-talk, maintain in-the-moment focus, manage distractions, and enhance commitment during a golf round or practice session.

I. Core Logic & AI Integration:

- **Data Sources (Prime Tier Only):**
 - User's VARK profile (strong emphasis on Aural preference).
 - Mindset Ratings (e.g., instances of "distracted," "frustrated," "negative thoughts").
 - Logged Mental Cue Usage (identifying which cues are used or neglected).
 - Journal entries (if the user expresses self-doubt or negative internal dialogue).
 - AI's Trend Engine insights (e.g., "negative self-talk patterns emerge after missed putts," "focus breaks down with internal chatter").

- **AI Prompt Generation Engine:**
 - The AI will draw from a library of effective self-talk principles and phrases.
 - It will personalize and suggest prompts based on:
 - **User's Specific Challenge:** If a user struggles with staying present, prompts will focus on "in-the-moment" phrases. If confidence is low, phrases will build self-belief.
 - **Context:** Pre-shot, during a challenging hole, after a mistake, or during general practice.
 - **User's Language/Tone Preferences:** (Future) Adapting the prompt's tone (e.g., encouraging, firm, calm) based on user's interaction history.
- **Contextual Triggering:**
 - **Post-Round Analysis:** AI identifies instances where negative self-talk might have impacted performance and recommends specific counter-phrases.
 - **Pre-Round Planning:** Suggesting 1-2 core self-talk phrases for the user's mental game plan for the upcoming round.
 - **On-Demand:** Users can browse a library of self-talk prompts in the "Coach" section.
 - **Live Round (Future V1.5+):** Subtle, text-based push notifications (for silent reading) or optional discrete audio prompts for key phrases during high-pressure moments.

II. Content Examples (AI Generated - Aural Emphasis):

Below are examples of how the AI would generate "Self-Talk Prompts," demonstrating variation and personalization for an Aural learner:

1. For Staying Present:

-  "When your mind wanders, **audibly (or silently) repeat: 'Stay in the moment. This shot is my only focus.'**"

2. For Handling One Shot at a Time:

-  "To break down the round, **firmly say to yourself: 'One shot at a time. Nothing else matters right now.'**"

3. **For Commitment to the Shot:**

-  "Before your swing, **verbally affirm: 'See it, feel it, trust it, swing it.'** Hear your commitment."

4. **For Recovering from a Mistake:**

-  "After a bad shot, **audibly say: 'That's done. Reset. Next shot now.'** Let the words clear your mind."

5. **For Maintaining Calmness:**

-  "When you feel pressure building, **whisper to yourself: 'Calm, clear, confident.'** Focus on the sound of your own calming voice."

6. **For Confidence Building:**

-  "Before a challenging shot, **tell yourself: 'I've practiced this. I can do this.'** Listen to your own empowering words."

7. **For Distraction Management:**

-  "If noise or movement distracts you, **silently say: 'Focus inward. My bubble. My shot.'** Let the words build your mental barrier."

8. **For Tempo Control:**

-  "To control your tempo, **mentally hum a consistent rhythm or silently repeat 'one-and-two' during your swing.**"

9. **For Managing Expectations:**

-  "If you're striving for perfection, **remind yourself: 'Accept the outcome. Trust the process.'** Hear the release in your voice."

10. **For Positive Reinforcement:**

-  "After a good shot, **give yourself a quick, internal 'Well done!' or 'Great swing!'** Reinforce the positive audibly."

III. UI/UX Considerations:

- **Prominent Display (Text):** Prompts will primarily be displayed as short text phrases, often in bold or highlighted, making them easy to read and internalize for "audible" repetition.
- **Integration with Audio:** For Aural learners, these prompts could sometimes be accompanied by an option to hear the AI narrate the phrase, reinforcing the "aural" aspect.
- **"My Phrases" Section:** A dedicated section where users can save their favorite or most effective self-talk prompts for quick review.
- **Contextual Pop-ups:** Short, unobtrusive pop-ups during analysis or drills recommending a specific phrase.
- **Journaling Integration:** Prompts to use specific self-talk phrases after a user logs a particular mental state in their journal.
