FoCoCo Prime Tier: Movement-Based Routine Suggestions - Technical & Content Specification

Feature Name: AI-Personalized Kinesthetic Movement Cues & Routine Suggestions

VARK Modality: Kinesthetic (K)

Pillar: Focus (supporting consistency, presence, and self-regulation through physical anchors)

Description: AI-generated suggestions for specific, personalized physical movements or subtle bodily cues designed for Prime Kinesthetic learners to integrate into their pre-shot, post-shot, or between-shot routines. These suggestions aim to anchor focus, promote presence, and facilitate mental resets through tangible, repeatable physical actions.

I. Core Logic & AI Integration:

- **Data Sources (Prime Tier Only):**
 - **User's VARK Profile (Kinesthetic):** Prioritizes recommendations that involve physical sensation and movement.
 - **Routine Tracking Data:** Logs of routine consistency, type (Pre-shot, Post-shot, Between-shots), and specific steps completed (from "Interactive Checklists").
 - **Mental Cue Logging:** Identification of physical cues the user has already successfully employed (e.g., "Deep Breath," "Grounding").
 - **Mindset Ratings:** Correlation of mindset shifts (e.g., "rushed," "distracted") with specific points in the round or before/after certain shots.

- **Performance Data:** Link between routine adherence/physical cues and shot outcomes (e.g., improved putting consistency when a specific physical cue is logged).
 - **Journal Entries & Focus Logs:** User's written reflections on what physical actions helped or hindered their focus.
 - **AI's Trend Engine:** Identifies patterns in focus breakdowns or strengths that can be addressed or reinforced with movement-based cues.
- **AI Suggestion Engine:**
 - The AI draws from a curated library of effective movement-based cues and routine elements.
 - It analyzes the user's historical data (performance, mindset, existing routine habits) to identify opportunities for improvement or reinforcement.
 - **Personalization Logic:**
 - If the user struggles with rushing, suggest a movement that *slows them down*.
 - If the user needs to let go of a bad shot, suggest a movement that *physically signals release*.
 - If the user needs to feel more grounded, suggest a *physical grounding action*.
 - If a specific physical cue has worked well, suggest incorporating it more broadly.
 - Suggestions are delivered as clear, concise instructions for direct application.
- **Effectiveness Tracking & Refinement:**
 - Users can mark suggestions as "Tried" or "Effective."
 - The AI tracks subsequent mindset ratings and performance to infer the effectiveness of the suggested movements.
 - This feedback loop continuously refines future recommendations, ensuring they are optimally personalized.
- **Contextual Triggering:**

- **Post-Round Analysis:** After a round, the AI might suggest specific movements to address issues observed (e.g., "You seemed to rush on those short putts; try this specific foot-tap before your next ones").
- **Coach Section (Suggestions Feed / Library):** A dedicated section where personalized movement-based routine suggestions are listed, categorized, and explained.
- **Pre-Round Recommendation:** "For today's round, focus on incorporating the 'Grounding Stomp' into your pre-shot routine on challenging holes."
- **AI-Prompted Learning:** "Given your feedback on needing to 'feel more committed,' try adding this 'Firm Grip Check' to your routine."

II. Content Examples (AI-Generated Movement-Based Routine Suggestions - Kinesthetic Emphasis):

Below are examples of how the AI would present "Movement-Based Routine Suggestions," emphasizing physical actions for a Kinesthetic learner:

1. Suggestion: "The Grounding Stomp" (Pre-Shot Routine)

- **Purpose:** To enhance stability, reduce anxiety, and anchor focus by creating a strong physical connection to the ground.
- **When to Use:** Ideal when feeling unsettled, hurried, or disconnected from the ground before a shot.
- **The Movement:** After your practice swing and before addressing the ball, take one deliberate step into your setup, consciously **stomping your lead foot down gently**. Feel the connection to the earth.
- **Focus on This Feel:** The sensation of your **feet pressing firmly into the ground**, establishing a stable base.
- **Why it Works:** This physical action creates a strong proprioceptive anchor, immediately bringing your awareness to your body and the present moment, counteracting mental chatter.

2. Suggestion: "The Shoulder Release Sigh" (Post-Shot Reset)

- **Purpose:** To physically release tension and emotional baggage after a poor shot, preventing mental carry-over.
- **When to Use:** Immediately after hitting a bad shot, particularly one that causes frustration or disappointment.
- **The Movement:** As you walk away from the shot, **shrug your shoulders up towards your ears, hold for 1 second, then let them drop fully with a audible sigh or exhale**.

- **Focus on This Feel:** The physical sensation of **tension leaving your upper body** and the complete release with the exhale.
- **Why it Works:** This combines a physical action with breathwork, signaling to your body and mind that the previous shot is physically and emotionally "released."

3. Suggestion: "The Pocket Pat Protocol" (Between-Shots Focus)

- **Purpose:** To create a physical "reset" and anchor attention to the upcoming shot, especially during walks or waiting.
- **When to Use:** When walking between shots, particularly after a few holes, or during slow play.
- **The Movement:** As you approach your ball, or while waiting, gently **pat your front or back pockets twice with your hand**. This can be a symbolic gesture to "deposit" the previous shot and "prepare" for the next.
- **Focus on This Feel:** The **tactile sensation of your hand on your pocket**, bringing your awareness back to your body and the present task.
- **Why it Works:** It's a subtle, repeatable physical cue that helps break the chain of thought from the previous shot and transition mentally to the current moment.

4. Suggestion: "The Firm Grip Check" (Commitment & Control)

- **Purpose:** To physically reinforce commitment to the shot and ensure proper connection with the club.
- **When to Use:** When feeling indecisive or a lack of connection/trust over the ball.
- **The Movement:** Just before starting your swing, give your grip a very **slight, firm squeeze (not a death grip!)**, then **immediately relax to your normal pressure**.
- **Focus on This Feel:** The **physical sensation of the club in your hands**, and the feeling of conscious control and then release.
- **Why it Works:** This subtle physical action brings immediate awareness to the primary connection point with the club and confirms your readiness and commitment to the swing.

III. UI/UX Considerations:

- **Dedicated "Suggestions" Feed:** A prominent section within the Coach tab specifically for AI-generated movement cues.
- **Clear, Concise Language:** Suggestions are presented in short, actionable text.
- **Supporting Visuals (Optional/Minimal):** Simple static images or very short GIFs could illustrate the movement, but the core emphasis remains on the textual instruction and kinesthetic *feel*.
- **"Try It Out" / "Add to Routine" Buttons:** Clear calls to action for users to integrate the suggestion into their practice or live play.
- **"Did this Help?" Feedback Loop:** A quick, simple mechanism for users to rate the effectiveness of a suggested movement cue, providing critical data for AI refinement.
- **Categorization:** Suggestions can be categorized by routine type (pre-shot, post-shot) or focus benefit (grounding, release, commitment).
- **Personalization Display:** Clearly indicate that the suggestion is "Recommended for You based on your recent rounds."
