FoCoCo Prime Tier: Article Summaries - Technical & Content Specification

Feature Name: AI-Summarized Focus Articles & Guides

VARK Modality: Read/Write (R/W)

Pillar: Focus (with supporting knowledge for Control and Confidence)

Description: Prime users gain access to a curated library of articles and guides on golf-specific focus techniques derived from sports psychology. The AI rephrases and summarizes this content into concise, digestible text, emphasizing key takeaways and actionable strategies, optimized for Read/Write learners.

I. Core Logic & AI Integration:

- **Content Curation (Back-end / Manual + AI Assisted):**
 - A pre-selected library of high-quality articles, research papers, and guides on focus, concentration, distraction management, and routine optimization in sports psychology. This content would be ingested by the system.
- **AI Rephrasing & Summarization Engine:**
 - The AI will process the full text of the curated articles.
 - It will identify core concepts, key findings, and actionable techniques related to focus.

- The AI will then rephrase and condense this information into clear, concise summaries, using language accessible to a golfer, avoiding overly academic jargon.
- **Read/Write Optimization:** Summaries will be presented in a structured text format, utilizing:
 - Headings and subheadings for clear organization.
 - Bullet points and numbered lists for easy scannability.
 - Bold text for emphasis on key terms and takeaways.
 - Logical flow and precise language for comprehensive understanding.
- **Personalization & Recommendation:**
 - The AI will recommend specific article summaries based on the user's VARK profile (R/W preference) and their identified focus patterns, challenges, or recent performance data.
 - For example, if a user's journaling indicates struggle with "distraction on the course," the AI might recommend an article summary on "Techniques for Managing External Distractions."
- **Contextual Triggering:**
 - **Dedicated Library:** A prominent section within the "Coach" tab (e.g., "Focus Library," "Learn More") where users can browse all available article summaries.
 - **Post-Insight Recommendation:** After providing a "Detailed AI-Generated Insight" on a focus pattern, the AI might suggest a relevant article summary for deeper understanding.
 - **Proactive Notifications:** Periodically, the AI might push a notification: "Here's a concise summary of a key article on [Focus Topic] that might interest you."

II. Content Examples (AI-Summarized Articles - Read/Write Emphasis):

Below are examples of how the AI would present "Article Summaries," demonstrating structured, actionable textual content for a Read/Write learner:

1. Article Summary: "The Power of Selective Attention in Golf"

- **Source:** [Sports Psychology Journal/Author Name]
- **Key Takeaways on Focus:**
 - **Definition:** Selective attention is the ability to focus on relevant cues while ignoring distractions. In golf, this means focusing on the target line, ball, and pre-shot routine.
 - **Impact:** Improved selective attention leads to better shot execution and reduced mental errors under pressure.
- **Actionable Strategies for Golfers:**
 - **"Spot Focus" Drill:** Before each shot, select a single, tiny spot on your target line and hold your gaze there for 3-5 seconds.
 - **Sensory Filtering:** Consciously identify and 'label' distractions (e.g., "wind noise," "chatter") then immediately return your focus to your internal routine.
 - **Pre-Shot Checklist Integration:** Embed a specific "Focus Cue" step into your written pre-shot routine to consciously narrow your attention.

2. Article Summary: "Managing Pre-Shot Nerves for Optimal Focus"

- **Source:** [Sports Psychology Blog/Author Name]
- **Understanding Pre-Shot Anxiety:**
 - Anxiety can narrow focus inappropriately or cause mind-wandering.
 - Physical symptoms (e.g., rapid heart rate) can hijack attention.
- **Techniques for R/W Learners:**
 - **"Anxiety Awareness Log":** Write down moments of pre-shot anxiety, noting triggers and physical sensations. This helps you recognize and prepare.
 - **"Coping Statement Script":** Develop 1-2 written phrases (e.g., "I am calm," "Trust my training") to read or mentally recite when nerves arise.
 - **Breathing Protocol:** Detail a written 4-7-8 breathing sequence to follow before each shot to calm the nervous system and re-center focus.

3. Article Summary: "Maintaining Focus Through the Round: Preventing Mental Fatigue"

- **Source:** [Golf Psychology Resource]
- **Challenge:** Focus is a finite resource. Mental fatigue leads to costly errors in later stages of the round.
- **Written Strategies:**
 - **"Mid-Round Mental Checkpoint Checklist":** After every 3-4 holes, use a written checklist:  Hydrate  Briefly stretch  Re-evaluate mental goal  Review 1-2 positive shots.
 - **"Energy Preservation Plan":** Write down specific moments where you can 'switch off' focus (e.g., walking between holes, waiting on the tee) and mentally relax, conserving mental energy.
 - **"Refocus Cue Card":** Carry a small card with a single word or phrase (e.g., "Re-Engage") to read when you feel your focus dipping.

III. UI/UX Considerations:

- **Dedicated "Library" or "Resources" Section:** A clear, intuitive area within the app for accessing these summaries.
- **Categorization/Search:** Summaries categorized by focus topic (e.g., "Distraction," "Routine," "Pressure"), with search functionality.
- **Clean Readability:** Optimized for reading on a mobile device:
 - Large, legible fonts.
 - Sufficient line spacing and paragraph breaks.
 - Responsive design for different screen sizes.
- **"Save for Later" / "Bookmark" Functionality:** Allows users to easily save summaries they find particularly useful.
- **"Print/Export" Option:** Enable users to print or export summaries for offline review.
- **Visual Elements (Minimal):** While primarily text, small, relevant icons or diagrams could accompany the text to break monotony, provided they enhance understanding for R/W learners.
- **Feedback Mechanism:** (Future) Allow users to rate the helpfulness of a summary, providing data for AI refinement.
