Date: July 3, 2025

FoCoCo Prime Tier: Key Phrase Highlights - Technical & Content Specification

Feature Name: AI-Highlighted Key Focus Concepts

VARK Modality: Read/Write (R/W)

Pillar: Focus (supporting all aspects of mental game clarity)

Description: A feature designed for Prime Read/Write users where the AI automatically identifies and visually highlights (e.g., bolding, color-coding) important focus-related concepts, actionable techniques, and core principles within various text summaries, insights, and article rephrases. This enhances readability, comprehension, and retention of critical information.

I. Core Logic & AI Integration:

- **Content Sources for Highlighting:**
 - **Detailed AI-Generated Insights:** The comprehensive textual analyses provided by the AI.
 - **AI-Summarized Focus Articles & Guides:** Rephrased summaries of sports psychology content.
 - **Journal Entry Analyses:** AI-extracted themes or insights from user's written entries.
 - **Checklists/Planners:** Key actionable steps or reminders within structured templates.

- **AI Key Phrase Identification Engine:**
 - The AI utilizes Natural Language Processing (NLP) to scan all relevant textual content.
 - It maintains a dynamic library of predefined "Key Focus Concepts" (e.g., "present moment awareness," "controlling the controllable," "process over outcome," "pre-shot routine," "re-centering," "attentional control," "letting go," "commitment," "trusting your swing," "mental reset," "distraction management").
 - The AI identifies instances of these (or semantically similar) phrases within the text.
 - **Highlighting Logic:** The AI determines the most impactful way to highlight, typically bolding for emphasis, but could also consider:
 - Italicizing for concepts.
 - Underlining for actionable steps.
 - (Future) Subtle color-coding based on concept type (e.g., "green for positive action," "orange for a challenge to address").
- **Read/Write Optimization:** Directly supports R/W learners by visually breaking down text, drawing attention to essential information, and aiding in note-taking or review.
- **Contextual Triggering:**
 - **Automatic Application:** This feature is automatically applied to all eligible textual content viewed by a Prime R/W user. It's an enhancement to existing content delivery.
 - **Review/Study:** When users revisit past insights, summaries, or journal analyses, the highlights are present to aid in quick review.

II. Content Examples (AI-Highlighted Textual Content - Read/Write Emphasis):

Below are examples of how the "Key Phrase Highlights" feature would enhance existing textual content for a Read/Write learner:

1. **From a "Detailed AI-Generated Focus Insight":**
 - **Insight: Post-Mistake Focus Resilience**

- **Observation:** Your data from the last three rounds shows a significant pattern: after logging a "Double Bogey" or worse, your Mindset Rating consistently drops to **"Frustrated" or "Distracted"** on the subsequent hole, leading to an average of 1.5 additional strokes on those follow-up holes.
- **Explanation:** This indicates a temporary breakdown in your ability to **'let go' of past mistakes** and re-center your focus. The mental carry-over from a poor hole is actively impacting your performance on the next.
- **Actionable Steps:**
 - Implement a **"10-Second Reset Protocol"**: Immediately after a poor shot/hole, mentally (or physically) count to 10. During this count, consciously **release the past**.
 - **Verbalize a "Reset Phrase"**: After the count, clearly state to yourself, **"That's done. Next shot now."** Write this phrase down and review it before your next round.
 - **Pre-Walk Routine:** As you walk to the next shot, verbally review your next shot's strategy, shifting **focus away from the prior mistake**.

2. From an "AI-Summarized Focus Article":

- **Article Summary: "The Power of Selective Attention in Golf"**
- **Key Takeaways on Focus:**
 - **Definition: Selective attention** is the ability to focus on relevant cues while ignoring distractions.
 - **Impact:** Improved selective attention leads to better shot execution and reduced **mental errors** under pressure.
- **Actionable Strategies for Golfers:**
 - **"Spot Focus" Drill:** Before each shot, select a single, tiny spot on your target line and **hold your gaze there for 3-5 seconds**.
 - **Sensory Filtering:** Consciously identify and 'label' distractions (e.g., "wind noise," "chatter") then immediately return your **focus to your internal routine**.

3. From a "Written Strategy Planner":

- **Round Focus Strategy Planner: [Course Name] - [Date]**

- **Overall Focus Theme for This Round: "Stay Present, One Shot at a Time"**
- **Key Focus Cues for Today:**
 - Pre-Shot: **"Target First"** (visualize + commit)
 - Post-Shot: **"Release & Reset"** (deep breath + move on)
- **Mindset Management Strategy:** If frustrated, refer to **"Mid-Round Reset"** checklist.

III. UI/UX Considerations:

- **Subtle but Clear Highlighting:** The highlighting should be prominent enough to catch the eye but not so overwhelming that it makes the text difficult to read.
- **Consistency:** The highlighting style (e.g., always bold for key concepts, italics for terms) should be consistent across the app.
- **Accessibility:** Ensure highlighting does not negatively impact accessibility for users with visual impairments (e.g., sufficient contrast).
- **No User Interaction:** This is an AI-driven enhancement; users do not enable/disable individual highlights (though a global toggle for all highlighting could be a future consideration).
- **Integration:** Seamlessly integrated into existing text-based content views.
