FoCoCo Prime Tier: "Focused Gaze" Exercise - Technical & Content Specification

Feature Name: Focused Gaze Exercise

VARK Modality: Visual (V)

Pillar: Focus (specifically pre-shot focus and eliminating distractions)

Description: An AI-guided visual practice designed to train the user's ability to narrow their attention and concentrate intensely on a specific target or focal point before executing a golf shot, thereby enhancing in-the-moment focus and reducing visual distractions.

I. Core Logic & AI Integration:

- **Data Sources (Prime Tier Only):**
 - User's VARK profile (strong emphasis on Visual preference).
 - Mindset Ratings (if a user logs "distracted" or "lack of focus" during a round, particularly on tee shots or putts).
 - Performance data related to aiming or target acquisition (e.g., missed fairways, missed putts due to alignment issues).
 - Mental Cue Usage (if users struggle with "Target Focus" cue).
 - AI's Trend Engine insights (e.g., "focus wavers when facing narrow fairways," "struggles with target commitment").

- **AI Guidance Engine:**
 - The AI will provide sequential, step-by-step visual prompts and instructions for the exercise.
 - It will personalize the prompts based on:
 - The user's recent performance (e.g., if driving is an issue, the exercise might emphasize focusing on a specific spot on the fairway).
 - The context (e.g., a quick practice before a round, a specific drill after a challenging round).

- **Contextual Triggering:**
 - **Recommendation:** Post-round analysis (e.g., "You struggled with focus on your drives; try the Focused Gaze exercise").
 - **Scheduled Practice:** Integrated into a personalized mental practice plan.
 - **On-Demand:** User can select the exercise from the "Coach" section under the Focus pillar.

II. Content & Display Elements (Visual Emphasis):

The exercise will primarily consist of on-screen visual prompts and, potentially, static imagery or subtle animations to guide the user's gaze.

1. **Instructional Text:** Clear, concise text prompts that guide the user's visual attention. These will be AI-rephrased.
 - *Example Prompt Sequence:*
 - "Find a specific, small target in the distance (e.g., a single leaf on a tree, a speck of dirt on the green)."
 - "Allow your eyes to narrow, bringing that target into sharp, singular focus."
 - "Block out everything else in your peripheral vision. See *only* your target."
 - "Hold your gaze steadily, feeling your attention consolidate on that single point."
 - "Now, slowly broaden your vision to include your immediate surroundings, but maintain that laser-like focus on your target."

2. **Static Imagery (Optional):** Simple, abstract images that visually represent narrowing focus (e.g., a bullseye, a tunnel vision effect, a single illuminated point).
3. **Subtle Animations (Optional):** If implemented, animations could visually demonstrate the "narrowing" of vision or the concept of a single focal point. This would be a subtle, non-distracting visual aid.
4. **Timer/Pacer:** A visual timer or progress bar to indicate the duration of each "gaze" segment or the overall exercise.

III. UI/UX Considerations:

- **Dedicated Exercise Screen:** The exercise would likely take place on a dedicated screen within the app to minimize distractions.
- **Minimalist Interface:** Clean, uncluttered UI to promote concentration.
- **Guided Flow:** Clear "Next" or "Done" buttons, or an automated progression through prompts if timed.
- **Repeatability:** Easy access to repeat the exercise for practice.
- **Feedback/Reflection:** After the exercise, prompt for a quick self-assessment (e.g., "How focused did you feel?").
