FoCoCo Prime Tier: Heat Maps - Technical & Content Specification

Feature Name: Focus Heat Maps (Course Layout Overlays)

VARK Modality: Visual (V)

Pillar: Focus (with insights into performance consistency)

Description: A dashboard feature for Prime users that overlays a color-coded "heat map" onto actual golf course layouts, visually representing areas or holes where the user's focus (derived from mindset ratings and performance consistency) was particularly high or low during a round.

I. Core Logic & AI Integration:

- **Data Sources (Prime Tier Only):**
 - **Hole-by-Hole Stats (Opt-in):** Mindset Rating per hole, Putts Taken, Fairway Hit (Yes/No), Green in Regulation (Yes/No), Score per hole.
 - **Segment Summaries:** Aggregated mindset and performance data for 3-hole segments.
 - **AI's Trend Engine:** Analyzes consistency in performance and mindset across different holes/segments to infer focus levels.
- **Focus Metric Derivation:**

- The AI will process the per-hole/segment data to calculate a "Focus Score" for each area of the course. This score will be influenced by:
 - Direct Mindset Rating.
 - Performance consistency (e.g., consecutive GIRs, fewer 3-putts, sticking to intended strategy).
 - Correlation between specific holes and drops in performance/mindset.
 - Example: A consistently high mindset rating coupled with achieving GIR and few putts on a hole would indicate high focus for that area. A sudden drop in mindset and multiple missed fairways might indicate low focus.
- **Heat Map Generation:**
 - The AI/system will apply a color gradient to segments or specific areas of the course layout.
 - **Color Scale:** Needs to be clearly defined (e.g., Green = High Focus/Optimal, Yellow = Moderate/Fluctuating, Red = Low Focus/Challenged).
- **Triggering/Access:**
 - Accessed via the "Prime Dashboard" after a round has been logged with sufficient hole-by-hole data.
 - Users can select a specific round to view its associated Heat Map.
 - (Future) Option to view aggregated heat maps across multiple rounds on the same course to identify recurring patterns.

II. Content & Display Elements (Visual Emphasis):

1. **Interactive Course Layout:** Display of the actual golf course map, allowing users to zoom and pan.
2. **Color-Coded Overlays:** Translucent color overlays on each hole or specific areas of holes, corresponding to the derived "Focus Score."
 - Hole-level granularity (e.g., an entire hole is colored based on overall focus during that hole).
 - (Future) Segment-level or even more granular fairway/green focus areas if specific data points allow.

3. **Legend:** A clear color legend explaining what each color signifies (e.g., "Green: Optimal Focus," "Red: Focus Lapses").
4. **Interactive Tooltips:** On hover/tap, a tooltip displays:
 - Hole number.
 - Focus score/rating for that hole/segment.
 - Key contributing factors (e.g., "Mindset: Distracted," "3-putt," "Lost Ball," "Good GIR").
 - (Optional) Small summary of mental cues used on that hole.

III. UI/UX Considerations:

- **Dashboard Integration:** A prominent component within the Prime Dashboard, distinct from "Performance Overlays" but complementing them.
- **Clarity:** The heat map should be visually distinct from the underlying course map and easy to interpret at a glance.
- **Performance:** The map rendering needs to be smooth, even with complex overlays.
- **User Control:** Users should be able to toggle the heat map on/off or filter by specific metrics (e.g., "show focus only," "show putts only").
- **Actionable Insights Link:** The heat map should serve as a visual prompt, with a clear path to related AI insights or journal entries for holes where focus was particularly challenged.
