Date: July 3, 2025

Focus Pillar: Kinesthetic (K) Content Delivery for Developers

I. Interactive Checklists

- **Purpose:** To allow users to physically tap to confirm completion of actions within routines.
- **Content Needed:**
 - **Core Checklist Item Library:** A comprehensive list of individual physical actions or kinesthetic cues that can be part of a routine (e.g., "Feel your feet on the ground," "Deep breath, feel chest expand," "Tap club on shoe," "Waggle to feel weight," "Adjust glove," "Consciously feel stride").
 - **Standard Routine Templates:** Pre-defined sequences of these actions for common routines (e.g., "Basic Pre-Shot Routine," "Simple Post-Shot Reset," "Between-Shot Walk Focus"). These serve as starting points for AI personalization and user customization.
 -

II. Actionable Prompts

- **Purpose:** To provide concise, immediate instructions for physical actions to regain focus.
- **Content Needed:**
 - **Actionable Cue Library:** A database of short, direct physical actions designed to shift focus or reset mindset (e.g., "Walk slowly to the ball," "Adjust your grip," "Clench & release hands," "Tap your putter head gently," "Take three slow steps away").
 - **Contextual Triggers:** Define the types of in-round situations or mindset indicators that should trigger these prompts (e.g., user logs "rushed")

mindset, AI detects performance deviation after a bad shot, slow pace of play).

III. "Feel-Based" Drills

- **Purpose:** To recommend drills emphasizing the physical sensation of a swing or a putt to improve focus.
- **Content Needed:**
 - **"Feel-Based" Drill Library:** Detailed descriptions for a variety of drills, each focusing on a specific kinesthetic sensation. For each drill:
 - **Drill Name:** (e.g., "Heavy Clubhead Release Drill," "One-Handed Putting Stroke," "Step-Through Tempo Drill").
 - **Purpose:** Explain the specific focus or mechanical benefit (e.g., "improve tempo," "enhance clubface awareness," "promote balanced finish").
 - **Step-by-Step Instructions:** Clear, concise physical actions for performing the drill.
 - **"Focus on This Feel":** The core kinesthetic aspect – what physical sensation the user should concentrate on (e.g., "feel the clubhead lag," "feel the putter face staying square," "feel the weight transfer").
 - **Practice Goal/Repetitions:** Recommended number of repetitions or duration.
 - **Expected Outcome:** What the user should physically notice or achieve.
 - **Categorization:** Logical categories for drills (e.g., Full Swing, Short Game, Putting, General Focus).
 -

IV. Biofeedback Integration (Future Potential)

- **Purpose:** To integrate with wearables for real-time feedback on physical states tied to focus levels.
- **Content Needed (for AI interpretation and prompt generation, assuming wearable data streams):**
 - **Physiological Baselines (conceptual):** General understanding of healthy/optimal ranges for HR, HRV, Respiration Rate in golf contexts (AI will personalize per user).

- **Correlation Rules:** Define how specific physiological changes (e.g., HR spike, HRV drop) should be correlated with potential focus issues (e.g., anxiety, rushing, distraction).
- **Associated Kinesthetic Responses:** Link specific physiological states to recommended physical actions to regulate them (e.g., high HR -> "Deep Belly Breath," low HRV -> "Shoulder Release Sigh").
- **Simplified Visual Cues:** Design concepts for minimal on-screen indicators representing physiological states (e.g., a "focus zone" meter, simple heart icon).

V. Movement-Based Routine Suggestions

- **Purpose:** AI suggests specific movements or physical cues to anchor focus during a round.
- **Content Needed:**
 - **Movement Cue Library (Expanded):** An extensive list of subtle to overt physical movements that can serve as mental anchors (e.g., "The Grounding Stomp," "The Shoulder Release Sigh," "The Pocket Pat Protocol," "The Firm Grip Check," "Subtle Toe Wiggle," "Conscious Head Turn to Target").
 - **Application Contexts:** For each movement, define when/where it's most effective (e.g., pre-shot, post-shot, walking, waiting, under pressure).
 - **Rationale:** Brief explanations of *why* each movement helps (e.g., "creates a physical anchor," "releases tension," "promotes present moment awareness").

VI. Experiential Learning Scenarios

- **Purpose:** Guided practices encouraging physical engagement to understand focus.
- **Content Needed:**
 - **Scenario Scripts:** Detailed, step-by-step guides for simulated golf situations. For each scenario:
 - **Scenario Name:** (e.g., "The Pressure Putt Protocol," "Resetting After a Bad Drive," "Focusing in Slow Play").
 - **Goal:** The mental/focus skill to be developed.
 - **Setup Instructions:** What the user should physically do to prepare (e.g., "set up to a 6-foot putt").
 - **AI Guidance Script:** The exact text and optional audio prompts the AI will deliver at each stage, emphasizing physical actions, sensations,

and internal experiences. (e.g., "Feel your feet settle...", "Physically walk X paces...").

- **User Interaction Points:** Define where the user needs to tap or provide simple physical feedback.
- **Debriefing Prompts:** Questions or insights the AI will offer post-scenario, encouraging reflection on the physical experience.

VII. "Grounding" Exercises

- **Purpose:** Prompts to engage the senses and physical body to bring attention to the present moment.
- **Content Needed:**
 - **Grounding Exercise Library:** Descriptions of exercises that emphasize sensory and bodily awareness (e.g., "The Rooted Stance," "5-4-3-2-1 Sensory Check," "Textured Grip Awareness," "Conscious Walking Steps," "Body Scan Breath").
 - **Step-by-Step Physical Instructions:** How to perform each exercise, with clear emphasis on the kinesthetic or sensory aspect.
 - **"Focus on This Feel/Sensation":** The core experience the user should be aware of (e.g., "pressure of feet," "texture of grip," "air movement in lungs").
 - **Situational Applicability:** When to use each exercise (e.g., "on the tee," "waiting," "feeling anxious").

VIII. Interactive Routine Builder

- **Purpose:** A tool where users can build their own physical pre-shot or post-shot routines and track adherence.
- **Content Needed:**
 - **Library of Build-Block Actions:** A comprehensive list of individual, tappable physical actions/cues that users can drag, drop, or select to build routines (drawing from "Interactive Checklists" and "Movement-Based Routine Suggestions").
 - **Categorization:** Organize build-block actions by type (e.g., "Breathing Cues," "Physical Anchors," "Visual Cues").
 - **Default Templates:** Provide a few pre-built routine templates that users can start from and customize.

- **Adherence Tracking Metrics:** Define the data points to be captured for each routine execution (e.g., steps completed, time taken, routine type, associated shot/hole).

IX. Real-time Physical Cues

- **Purpose:** AI-driven alerts based on real-time data to suggest a physical reset when focus wavers.
- **Content Needed:**
 - **Real-time Cue Text:** Concise, action-oriented phrases for immediate physical prompts (e.g., "Slow your steps. Feel your feet," "Clench & release hands," "Tap club on shoe. Reset.").
 - **Trigger Conditions:** Specific rules or patterns in real-time data (mindset logs, performance deviations, pacing data, *future* biofeedback) that should activate each cue.
 - **Priority/Frequency Rules:** How often cues should be delivered and which cues take priority in certain situations.

X. Tactile Feedback (Future Potential)

- **Purpose:** Potential for haptic feedback or other physical cues from the device to remind users to engage a focus technique.
- **Content Needed (for future development planning):**
 - **Haptic Pattern Library:** Defined distinct haptic patterns (e.g., short pulse, rhythmic tap, sustained buzz) to be associated with different types of focus cues.
 - **Mapping to Cues/Actions:** Clear mapping of which haptic pattern corresponds to which specific physical focus action or reminder (e.g., rhythmic pulse = "deep breathing").
 - **Intensity/Duration Guidance:** Recommendations for the intensity and duration of haptic feedback for various situations.
 - **Conceptual Integration:** How these haptic cues would integrate with the "Real-time Physical Cues" and "Biofeedback Integration" features.
