FoCoCo Prime Tier: Actionable Prompts - Technical & Content Specification

Feature Name: AI-Driven Kinesthetic Action Prompts

VARK Modality: Kinesthetic (K)

Pillar: Focus (with immediate application for control and self-regulation)

Description: Concise, actionable prompts delivered by the AI that instruct Prime Kinesthetic users to perform immediate physical actions or bodily adjustments to regain focus, re-center, or manage a specific mental state during a golf round or practice. These prompts emphasize direct physical engagement.

I. Core Logic & AI Integration:

- **Data Sources (Prime Tier Only):**
 - **User's VARK Profile (Kinesthetic):** Ensures prompts are physical and action-oriented.
 - **Real-time Context (During Round):** Current hole, recent shot outcome, logged mindset rating (e.g., if user logged "Distracted" or "Rushed").
 - **Historical Performance Data:** Identification of specific situations where the user's focus tends to waver (e.g., after a penalty, on long walks, during slow play).
 - **Mental Cue Usage:** AI identifies which physical cues (e.g., "Deep Breath") have been effective for the user.

- **Journal Entries/Focus Logs:** Insights from user's self-reported physical responses to focus challenges.
- **AI's Trend Engine:** Detects patterns in focus breakdowns (e.g., "focus often breaks down after a three-putt").
- **AI Prompt Generation Engine:**
 - The AI dynamically generates specific physical action prompts based on the detected context, historical data, and identified focus challenges.
 - Prompts are:
 - **Concise:** Short, direct, and easy to understand at a glance.
 - **Action-Oriented:** Use strong verbs that instruct physical movement or sensation.
 - **Contextual:** Highly relevant to the immediate situation.
 - **Personalized:** Based on the user's past effectiveness with certain physical actions.
- **Effectiveness Tracking (User-Reported / Inferred):**
 - After a prompt is given, the AI can ask a quick follow-up (e.g., "Did that help? Yes/No") or infer effectiveness based on subsequent mindset ratings or performance.
 - This feedback loop refines future prompt delivery.
- **Contextual Triggering:**
 - **Mid-Round (Real-time):** The primary delivery mechanism. If the AI detects a potential focus lapse (e.g., based on logged mindset or a cluster of poor shots), it can push a discreet, timely prompt.
 - **Post-Round Summary:** The AI might suggest specific actionable prompts the user could try in similar future situations.
 - **Coach Section (Library of Actions):** A browseable library of common actionable prompts, categorized by focus challenge (e.g., "Regaining Focus," "Managing Pressure," "Resetting After a Bad Shot").
 - **AI-Prompted Learning:** "Next time you feel rushed on the tee, try this physical action."

II. Content Examples (AI-Generated Actionable Prompts - Kinesthetic Emphasis):

Below are examples of how the AI would generate "Actionable Prompts," emphasizing physical instructions for a Kinesthetic learner:

1. To Regain Focus After a Distracting Event (e.g., noise, bad shot):

- **"Tap your putter head gently on the ground, twice."** (A physical grounding action)
- **"Physically adjust your glove. Feel the leather."** (Tactile sensation to re-center)
- **"Take three slow, deliberate steps away from the ball."** (Conscious movement to create space)
- **"Clench your fists tightly, then slowly release the tension."** (Physical release of tension)

2. To Slow Down / Prevent Rushing:

- **"Walk slowly to the ball, feeling your feet connect with each step."** (Focus on the physical act of walking)
- **"Take a deep breath and feel your chest expand fully."** (Focus on bodily sensation of breathing)
- **"Before addressing the ball, wiggle your toes inside your shoes."** (Subtle physical cue for presence)
- **"Perform a conscious, slow club waggle."** (Emphasizing deliberate movement)

3. To Enhance Commitment / Presence:

- **"Tap your club on your lead leg. Confirm your target."** (Physical connection to reinforce decision)
- **"Feel your grip firmly, then relax it slightly before swinging."** (Focus on tactile sensation of grip pressure)
- **"Before addressing, make eye contact with your target. Hold it."** (Physical gaze to solidify focus)
- **"Feel the weight shift during your practice swing."** (Focus on kinesthetic feel of the swing)

4. To Release Frustration / Reset:

- **"Physically brush a blade of grass off your shoe. Release the last shot."** (Symbolic physical action of letting go)
- **"Perform a quick, intentional stretch of your arms overhead."** (Physical release of tension)
- **"Tug firmly on your cap, then adjust it perfectly."** (Small, controlled physical action to reset)

III. UI/UX Considerations:

- **Non-Intrusive Delivery:** Prompts appear briefly and clearly on screen (e.g., a small overlay or notification), designed to be read and acted upon quickly without disrupting the game flow.
- **Large, Clear Text:** Easy to read at a glance, potentially with a contrasting background.
- **Simple Call to Action:** No complex menus; the prompt itself is the action.
- **Auditory Cue (Optional):** A subtle, non-distracting chime or vibration when a new prompt appears.
- **Minimal User Input:** Focus is on performing the physical action, not extensive tapping or navigation within the app.
- **Configurability (Prime):** Users can customize the types of prompts they receive or define their preferred physical actions for certain situations.
- **Immediate Dismissal:** Prompts disappear after a short time or upon user interaction (e.g., tapping the screen).
- **Contextual Icons:** Small, relevant icons could accompany the text (e.g., a foot icon for "walk slowly," a hand icon for "adjust grip") to quickly convey the action for K learners.
