FoCoCo Prime Tier: Experiential Learning Scenarios - Technical & Content Specification

Feature Name: AI-Guided Kinesthetic Experiential Focus Scenarios

VARK Modality: Kinesthetic (K)

Pillar: Focus (with direct application to stress management, decision-making, and adapting to real-world golf situations)

Description: Interactive, AI-guided scenarios or structured practice sessions designed for Prime Kinesthetic learners that require active physical engagement to simulate real-world golf situations impacting focus. Users will physically perform actions (e.g., set up to a ball, walk a putt, perform a routine under simulated pressure) while the AI guides them through mental processes and provides immediate, kinesthetically-oriented feedback and reflection points.

I. Core Logic & AI Integration:

- **Scenario Library (AI-Curated):**
 - The AI maintains a library of golf scenarios known to challenge focus (e.g., "Pressure Putt," "Bad Lie Recovery," "Slow Play Interruption," "Pre-Shot Routine in Wind").
 - Each scenario has defined stages and triggers for AI interaction.
- **AI Guidance & Real-time Prompts:**

- The AI acts as a virtual coach, providing audio and on-screen textual prompts for physical actions and mental states during the scenario.
 - Prompts are highly Kinesthetic-focused: "Feel your feet pressing into the ground," "Physically tap your club on your shoe," "Walk away from the ball, feeling your stride."
 - The AI adapts prompts based on simulated user choices or responses (e.g., if the user indicates feeling rushed, the AI might suggest a "slow breathing" exercise).
- **User Input/Interaction:**
 - Users indicate progress through the scenario via taps (e.g., "Tap when you've done this physical action," "Tap when you feel ready").
 - Users provide brief, tactile-focused feedback (e.g., "Did that feel solid? [Yes/No/A Little]").
- **AI Analysis & Debriefing:**
 - After completing a scenario, the AI provides a comprehensive textual debrief, tailored to the user's Kinesthetic experience within the scenario.
 - It highlights moments where focus was gained/lost, effective physical actions, and areas for improvement.
 - Connects the scenario experience to the user's actual on-course performance data and VARK profile.
 - Suggests follow-up Kinesthetic drills or specific movement cues.
- **Contextual Triggering:**
 - **Coach Section (Scenario Library):** A dedicated area for Browse and initiating experiential scenarios.
 - **Post-Round Recommendation:** If AI detects a recurring focus challenge (e.g., "struggles with focus on short putts under pressure"), it recommends a relevant scenario (e.g., "Pressure Putt Scenario").
 - **Pre-Round Warm-up:** Suggests a short scenario as a mental warm-up before a round.

II. Content Examples (AI-Guided Experiential Scenarios - Kinesthetic Emphasis):

Below are examples of how the AI would guide a user through an "Experiential Learning Scenario," emphasizing physical engagement for a Kinesthetic learner:

1. Scenario: "The Pressure Putt Protocol"

- **Goal:** To practice maintaining focus and executing a routine under simulated pressure for a critical putt.
- **Instructions:** Set up to a 6-foot putt on a practice green or at home (even without a ball, just the physical motion).
- **AI Guidance (Textual & Optional Audio Cues):**
 - "Alright, this is a must-make 6-foot putt for the win. Feel the pressure building."
 - **"Step 1: Walk to the ball.** As you walk, feel the subtle shift of your weight from heel to toe. Concentrate on the sensation of your feet on the ground. Tap when ready." (*User taps*)
 - **"Step 2: Read the putt.** Crouch down. Feel your body position. Visualize the *feel* of the ball rolling into the hole. Tap when ready." (*User taps*)
 - **"Step 3: Pre-Putt Physical Anchor.** Before addressing the ball, take a deep breath. Feel your shoulders relax as you exhale. Lightly tap the putter head on the ground three times. Tap when ready." (*User taps*)
 - **"Step 4: Address the ball.** Feel your feet settle, balance yourself. Notice the light pressure of your hands on the grip. Tap when ready." (*User taps*)
 - **"Step 5: Execute the stroke.** Focus purely on the *feel* of the putter swinging smoothly back and through, impacting the ball squarely. Perform your stroke now. Tap after." (*User taps*)
 - **"Step 6: Post-Putt Release.** Physically take two steps to the side, then gently shake out your hands. Feel the tension leaving your fingers. Tap when ready." (*User taps*)
- **AI Debrief:** "Great job physically engaging with the steps. Did you notice any moments where your body felt tense? Which physical cues helped you feel most committed? This experience helps you build muscle memory for pressure."

2. Scenario: "Resetting After a Bad Drive"

- **Goal:** To practice physically and mentally resetting after a frustrating tee shot.

- **Instructions:** Imagine you've just hit your drive horribly out of bounds. You're walking to the drop zone/re-tee.
- **AI Guidance:**
 - "That was a frustrating one. You're walking to re-tee. How does your body feel right now? Maybe tense, frustrated?"
 - **"Step 1: The 'Walk-Off' Release.** As you walk, exaggerate your stride. Feel the firmness of each step on the ground. With each step, mentally push away the previous shot. Tap when ready." (*User taps*)
 - **"Step 2: Physical Shake-Out.** Stop, stand tall. Gently shake out your arms and shoulders, feeling any tension literally fall away. Take a deep, cleansing breath, feeling your chest expand. Tap when ready." (*User taps*)
 - **"Step 3: Grounding and Re-Focus.** Feel your feet firmly planted. Take a small, conscious step towards your next setup position (even if imaginary). Feel the purpose in that step. Tap when ready." (*User taps*)
 - **"Step 4: Re-engage with the Club.** Pick up your club. Feel the weight and texture of the grip in your hands. Perform one slow, deliberate practice swing, focusing purely on the feel of the club's motion. Tap when ready." (*User taps*)
- **AI Debrief:** "By actively engaging your body in the reset, you interrupt the cycle of frustration. Which physical action felt most effective in shifting your mindset? Remember this for future moments on the course."

III. UI/UX Considerations:

- **"Play/Start Scenario" Button:** Clear entry point from the Coach section.
- **Full-Screen / Immersive Mode:** To minimize distractions and enhance the experiential feel.
- **Large, Clear Text Prompts:** Easy to read quickly and act upon.
- **Progress Indicator:** Simple "Step X of Y" to show scenario progress.
- **Interactive Tap Zones:** Large, responsive buttons for user input (e.g., "Tap When Done," "Feel It?").

- **Minimal Visuals:** Static images or very short, instructional GIFs can support the text and physical actions, but the focus is on user's own bodily experience.
- **Post-Scenario Debrief Interface:** A clear, well-structured text summary of the experience and AI insights.
- **Optional Audio Narration:** (If Aural features are integrated) AI can read the prompts aloud for an even more immersive experience for Kinesthetic learners.
- **"Practice This Scenario" Option:** Allows users to repeat scenarios they find beneficial.
