FoCoCo Prime Tier: Interactive Checklists - Technical & Content Specification

Feature Name: Interactive Kinesthetic Routine Checklists

VARK Modality: Kinesthetic (K)

Pillar: Focus (with direct application to Control and physical execution)

Description: Dynamic, interactive checklists designed for Prime Kinesthetic learners to physically tap on-screen to confirm the completion of each action within their pre-shot, post-shot, or between-shot routines. This hands-on interaction reinforces the physical and sequential nature of mental strategies, aiding in building consistent focus.

I. Core Logic & AI Integration:

- **Routine Data Sources (All Tiers):**
 - Routine Type Classification: Pre-shot, Post-shot, Between-shots tracking.
 - Mental Cue Logging: Tracking of cue use (e.g., Deep Breath, Trigger Word).
- **AI Personalization & Dynamic Generation (Prime Only):**
 - **User's VARK Profile (Kinesthetic):** Ensures the primary interaction method is tactile.
 - **Observed Performance Data:** The AI identifies routine inconsistencies or focus lapses from logged rounds (e.g., rushed routines leading to poor shots, or successful routines correlating with good outcomes).

- **Previous Routine Use:** AI learns which steps or cues the user frequently uses or struggles with.
- **Dynamic Checklist Creation:** Based on the above, the AI can:
 - Suggest specific actions for a user's checklist (e.g., "Add 'Feel feet on ground' if user struggles with balance/connection").
 - Prioritize steps that align with a user's current focus goal.
 - Adjust the length or complexity of the checklist.
- **Interactive Confirmation & Tracking:**
 - Users *physically tap* on a checklist item to mark it as complete.
 - The app records the completion of each item, the sequence, and the total time taken for the routine (optional, for later analysis).
 - This data feeds back into the AI for analysis of routine adherence and its correlation with mindset and performance.
- **AI Analysis of Checklist Completion:**
 - The AI will analyze the consistency of checklist completion.
 - It will correlate routine adherence (or lack thereof) with mindset ratings and on-course performance.
 - This analysis can inform "Detailed AI-Generated Insights" and "Kinesthetic Drill Recommendations" for further personalized coaching.
- **Contextual Triggering:**
 - **Pre-Round Flow:** Option to activate a routine checklist before starting a round.
 - **During Round:** Quick access via a floating button or context-sensitive prompt (e.g., after selecting a club).
 - **Coach Section:** A dedicated area for managing, creating, and reviewing custom routine checklists.
 - **AI Recommendation:** "Based on your recent round, try this 'Pre-Shot Consistency Checklist' before each shot on the front nine."

II. Content Examples (Interactive Checklist Items - Kinesthetic Emphasis):

Below are examples of checklist items, designed for physical interaction, that would be presented within the interactive checklist interface:

1. Pre-Shot Routine Checklist:

- **[] Feel your feet firmly on the ground.** (User taps to confirm feeling stable)
- **[] Take a deep, settling breath.** (User taps after taking the breath)
- **[] Visualize the *feel* of the desired swing.** (User taps after mentally rehearsing the motion)
- **[] Tap club to ground / waggle to feel the weight.** (User taps after a small physical action)
- **[] Step into the shot with purpose.** (User taps after initiating movement towards the ball)
- **[] Execute, trusting the motion.** (User taps after the swing, confirming commitment)

2. Post-Shot Reset Checklist:

- **[] Feel the tension release from your shoulders.** (User taps after a conscious relaxation)
- **[] Physically walk 10 paces away from the impact area.** (User taps after taking steps)
- **[] Lightly tap your pockets (symbolic 'reset').** (User taps after a small, intentional physical action)
- **[] Take three slow, deliberate steps toward the next shot.** (User taps after conscious movement)

3. Between-Shots Focus Checklist (During Walk):

- **[] Consciously feel your stride.** (User taps, focusing on the physical sensation of walking)
- **[] Gently clench and release your fists.** (User taps after a small, controlled muscle action)
- **[] Sip water, feeling the cool liquid.** (User taps after hydrating and focusing on the sensation)

- **[] Mentally 'park' the last shot; tap to clear.** (User taps to dismiss the previous shot, a symbolic physical action)

III. UI/UX Considerations:

- **Large, Responsive Tap Targets:** Checklist items should be large enough to easily tap on a phone screen, especially on the course.
- **Clear Visual Confirmation:** When an item is tapped, it should visually change (e.g., checkmark appears, text fades slightly, background color changes) to confirm completion.
- **Sequential Flow (Optional):** Option for sequential checklists, where only the next step becomes tappable after the previous one is completed, guiding the user.
- **Auditory Feedback (Optional):** A subtle "tap" sound effect upon completion to reinforce the interaction for K learners.
- **Minimal Text, Action-Oriented Language:** Checklist items use concise, action-focused language.
- **Customization:** Users can reorder, add, or remove steps from their personalized checklists.
- **Data Visualization:** Simple visual representation of routine consistency (e.g., a bar showing percentage of steps completed) in post-round summaries.
- **Accessible On-Course:** Designed for quick, intuitive use during a round without significant distraction.
