Shared with: Imad Bouirmane

Date: July 3, 2025

FoCoCo Prime Tier: Interactive Kinesthetic Routine Builder - Technical & Content Specification

Feature Name: AI-Powered Interactive Routine Builder & Adherence Tracker

VARK Modality: Kinesthetic (K)

Pillar: Focus (promoting consistency, personal ownership of routines, and self-regulation)

Description: A dedicated interactive tool for Prime Kinesthetic users allowing them to build, customize, and save their own personalized physical pre-shot, post-shot, and between-shot routines. The tool emphasizes physical actions and provides a direct, tactile way to track adherence during a round, with the AI analyzing consistency and providing feedback on routine effectiveness.

I. Core Logic & AI Integration:

- **User-Centric Routine Creation:**
 - Users can select from a library of suggested physical actions/cues (provided by AI based on K-VARK principles, derived from "Movement-Based Routine Suggestions" and "Grounding Exercises").
 - Users can also input their *own* custom physical actions/cues as free text.
 - Users arrange these steps in a preferred sequence.
 - Routines can be named (e.g., "My Go-To Pre-Shot," "Post-Putt Reset").
- **Routine Library (AI-Assisted Curation):**

- The app maintains a library of physical actions, movements, and sensations relevant to golf routines (e.g., "Feel feet grounded," "Deep belly breath," "Tap club on shoe," "Smooth waggle," "Visualize swing feel," "Adjust glove").
- The AI can suggest relevant actions based on common Kinesthetic practices or user's past data.
- **Real-time Adherence Tracking:**
 - During a round, the user can activate their chosen routine (e.g., "Pre-Shot Routine").
 - The routine displays as an "Interactive Checklist" where each step is a large, tappable element.
 - Users physically tap each step as they complete the action, providing immediate, tactile confirmation.
 - The app records:
 - Which routine was used.
 - Which steps were completed/skipped.
 - Time taken for the entire routine (optional for analysis).
 - Context (hole, shot type, pre/post/between).
- **AI Adherence Analysis & Feedback:**
 - The AI analyzes:
 - **Consistency:** How often the user activates and completes their chosen routine.
 - **Completeness:** Which steps are consistently missed or rushed.
 - **Correlation:** Links routine adherence (or breakdown) with mindset ratings, shot outcomes, and overall performance.
 - **Personalized Written/Kinesthetic Feedback:**
 - "Your data shows strong adherence to your 'Pre-Shot' routine on the front nine, correlating with higher GIR. However, steps like 'Feeling your feet grounded' were often skipped on the back nine when your mindset was 'Rushed'."
 - "Consider simplifying your 'Post-Shot' routine to just 2-3 key physical actions for easier adherence."

- "Let's try incorporating the 'Shoulder Release Sigh' into your post-shot routine. Your logs show you often hold tension after a missed putt." (Links to "Movement-Based Routine Suggestions").

- **Contextual Triggering:**

- **Dedicated "Routine Builder" Section:** A prominent area within the Coach tab.
- **Pre-Round Setup:** Option to select and activate routines before starting a round.
- **During Round Access:** Quick access to active routines via a floating or contextual button.
- **Post-Round Analysis:** AI recommends refining or creating new routines based on performance and focus trends.
- **AI-Prompted Action:** "Based on your recent rounds, building a custom 'Between-Shot' routine could help improve your focus during walks."

II. Content Examples (AI-Powered Kinesthetic Routine Builder Interface):

Imagine a drag-and-drop or selection interface within the app:

Routine Type: [Pre-Shot] [Post-Shot] [Between-Shots] [Putting]

Routine Name: "My Go-To Pre-Shot Routine"

Add Step:

- [] **Feel your feet firmly on the ground.**
- [] **Take a deep, settling breath.**
- [] **Visualize the *feel* of the desired swing.**
- [] **Tap club to ground / waggle to feel the weight.**
- [] **Step into the shot with purpose.**
- [] **Execute, trusting the motion.**

Available Kinesthetic Actions Library (AI-Suggested):

- "Grounding Stomp"
- "Shoulder Release Sigh"
- "Pocket Pat Protocol"

- "Firm Grip Check"
- "Conscious Walking Steps"
- "Textured Grip Awareness"
- "One-Handed Putt Feel"
- "Slowly count steps to ball"
- + *Add Custom Step (Text Input)*

Example User-Built Routine (Displayed as a Tappable Checklist):

My Go-To Pre-Shot Routine

- ☐ **Feel feet grounded.**
- ☐ **Deep belly breath, feel chest expand.**
- ☐ **One practice swing, feel the tempo.**
- ☐ **Firm grip check, then relax.**
- ☐ **Step in, feel balanced.**

III. UI/UX Considerations:

- **Intuitive Drag-and-Drop / Selection Interface:** For building and reordering routine steps.
- **Clear Visual Representation:** Each routine step is clearly displayed as a tappable item (similar to "Interactive Checklists").
- **Visual Feedback:** Confirmation upon tapping (e.g., checkmark, color change, subtle animation).
- **"My Routines" Library:** A section to save, edit, activate, and delete custom routines.
- **"Add Step" / "Remove Step" Functionality:** Easy modification of routines.
- **"Practice Mode":** Users can run their routine in practice mode to internalize the physical actions.
- **Adherence Dashboard:** Simple visualizations (e.g., bar graphs, heatmaps) showing routine consistency over time and per step.
- **AI Insight Pop-ups/Notifications:** Concise textual feedback on routine adherence and effectiveness, with suggestions for refinement.
- **Integration with Round Logging:** Seamless ability to activate and track routines directly during a logged round.
