Date: July 3, 2025

FoCoCo Prime Tier: Journaling Prompts for Focus - Technical & Content Specification

Feature Name: AI-Prompted Focus Journaling

VARK Modality: Read/Write (R/W)

Pillar: Focus (with cross-over to self-awareness and strategy refinement)

Description: AI-generated, targeted text prompts within dedicated input fields that encourage Prime Read/Write users to engage in detailed written reflection on specific focus challenges, effective strategies employed, and observed patterns during their golf rounds or practice sessions. The AI then analyzes these entries to provide deeper insights.

I. Core Logic & AI Integration:

- **Data Sources (Prime Tier Only - For Prompt Generation & Analysis):**
 - User's VARK profile (strong emphasis on Read/Write preference).
 - **Mindset Ratings:** Specific instances of "Distracted," "Rushed," "Calm," "Focused" mindset logs.
 - **Mental Cue Usage:** Data on which focus-related cues were logged.
 - **Performance Data:** Correlations between mental state and physical outcomes (e.g., poor focus leading to high scores on certain holes).
 - **Challenge Response Reflection (Prime-only):** User's notes on how they responded to challenges.

- **AI's Trend Engine:** Identifies recurring focus patterns, specific holes/situations where focus breaks down or excels.
- **Previous Journal Entries:** AI learns from past entries to offer more refined prompts.
- **AI Prompt Generation Engine:**
 - The AI will dynamically generate written prompts based on the user's recent performance data, logged mindset, and identified focus trends.
 - Prompts will be specific, open-ended, and designed to elicit detailed written responses relevant to focus.
 - **Personalization Parameters:**
 - [SCENARIO] Placeholder: (e.g., "that challenging par-3," "after the double bogey," "during slow play," "when trying to commit").
 - [MINDSET_STATE] Placeholder: (e.g., "feeling distracted," "maintaining composure," "overthinking").
 - [CUE_USED] Placeholder: (e.g., "your Deep Breath cue," "the 'One Shot' self-talk").
 - [IMPACT] Placeholder: (e.g., "how it impacted your next shot," "how you managed to regain control").
- **AI Analysis of Journal Entries:**
 - The AI will read and process the user's written journal entries (using NLP).
 - It will identify keywords, sentiment, and recurring themes related to focus.
 - This analysis feeds into the "Detailed AI-Generated Insights" feature, providing a richer data set for comprehensive feedback.
- **Contextual Triggering:**
 - **Post-Round Summary:** After a round, if the AI detects specific focus patterns (e.g., a drop in focus on specific holes), it will offer a targeted journaling prompt.
 - **Daily/Weekly Review:** As part of a prompt to reflect on the week's mental game.
 - **On-Demand:** Users can access these prompts in a dedicated "Journal" section, organized by focus themes.

- **AI-Driven Recommendation:** "Based on your recent round, I suggest journaling about your focus during those last three holes."

II. Content Examples (AI-Generated Journaling Prompts - Read/Write Emphasis):

Below are examples of how the AI would generate "Journaling Prompts for Focus," demonstrating specificity and encouraging detailed written reflection for a Read/Write learner:

1. General Focus Reflection (Post-Round):

- "Reflect on your focus during today's round. **Write about 2-3 moments where your focus was at its best, and what contributed to that clarity.** Then, describe a situation where your focus was particularly challenged. How did you attempt to regain it?"

2. Focus During Pressure Moments:

- "You noted a high-pressure moment on **[SCENARIO, e.g., 'the 18th tee']**. **Describe in detail how your focus felt in that situation.** What thoughts or distractions entered your mind? Did you use any specific strategies to maintain focus, and how effective were they?"

3. Recovering Focus After Mistakes:

- "After that challenging shot on **[SCENARIO, e.g., 'hole 7 where you hit OB']**, your mindset rating shifted to **[MINDSET_STATE, e.g., 'frustrated']**. **Write about your immediate thoughts and feelings.** How did you try to reset your focus for the next shot, and what could you do differently next time to prevent a mental carry-over?"

4. Routine & Focus Connection:

- "Your routine consistency was a bit inconsistent today. **Detail your pre-shot routine for your driving iron on [Hole Name]**. Were you fully present for each step? How do you think consistency in that routine impacts your focus on the actual swing?"

5. Distraction Management:

- "You mentioned **[SCENARIO, e.g., 'slow play / external noise']** impacting your focus. **Elaborate on how those distractions manifested in your**

mind. What specific thoughts or feelings arose? What written strategies could you implement next time to create a stronger mental 'bubble'?"

6. **Effective Focus Cues:**

- "The AI observed you logged using [**CUE_USED**, e.g., 'the 'Stay Present' cue'] effectively on holes [**Hole Numbers**]. **Write about how you integrated this cue and what its specific impact was on your focus.** How did it feel when you used it successfully?"

7. **Intentional Focus Goals:**

- "Before your next round or practice, **write down 1-2 specific focus goals you intend to work on.** Be precise. For instance, 'I will maintain focus only on my target during my pre-shot routine,' or 'I will immediately re-focus on my breath after every shot.'"

III. UI/UX Considerations:

- **Dedicated Journaling Screen:** A clear, uncluttered text input area within the "Journal" section.
- **Prompt Display:** Prompts are clearly displayed above the text input field, perhaps with a "New Prompt" button to cycle through options or generate a fresh one.
- **Expandable Text Field:** The input field should expand dynamically as the user types, allowing for detailed entries.
- **Date & Time Stamps:** Each journal entry is automatically timestamped and linked to a specific round if initiated from a round summary.
- **"Save" Functionality:** Prominent "Save" button to store entries.
- **Review/Edit Capabilities:** Users can easily review, edit, and delete past entries.
- **Search/Filter:** Ability to search past entries by keyword or filter by date/topic.

- **Integration with Insights:** A clear link to the "Detailed AI-Generated Insights" derived from journaling and other data.
- **Visual Prompts for R/W:** Use of clear headings, bold text in prompts, and bullet points to indicate structure and scannability, catering to the R/W preference.
