Focus. Confidence. Control.

Project: App1 - GOLF

Subject: VARK - Focus - Visual - All Content Required

Version: 1.8.5

Prepared by: Dirk J. Delfortrie

Shared with: Imad Bouirmane

Date: July 3, 2025

Content to Provide for Focus - Visual (V) Section:

1. Mental Imagery Cues:

- **Core Concepts/Phrases:** A foundational library of mental imagery themes (e.g., "target visualization," "perfect shot replay," "calm mindscape") that the AI will rephrase.
- **Placeholder Definitions:** Clear definitions for the AI to dynamically replace placeholders like [TARGET], [SHOT_TYPE], [EMOTION], and [COURSE_CONTEXT].

2. Performance Overlays:

- **Mindset Emojis:** The specific set of emojis to represent the 5-level mindset ratings.
- **Mental Cue Icons/Short Text Labels:** Standardized visual representations (icons or brief text) for each mental cue used.

3. Visual Drills:

- **Curated Video Library:** High-quality video examples of focused play, pre-shot routines, specific swing/putting mechanics (if tied to focus), and demonstrations of mental techniques.

- **Diagrams Library:** A collection of strategic diagrams for course management (e.g., dogleg play, hazard avoidance, green reading, target aiming).
- **Content Tagging Schema:** A clear system for tagging all visual assets by:
 - Golf skill (driving, putting, chipping, course management)
 - Mental skill (focus, control, pre-shot routine)
 - VARK type (Visual)

4. Heat Maps:

- **Course Layouts/Maps:** Digital representations of golf courses (these might be existing assets or require sourcing).
- **Heat Map Logic/Thresholds:** Definition of the data ranges and color gradients that represent "high focus" vs. "low focus" areas on the map (this is more logic, but needs content input on what colors mean what).

5. Graphical Trends:

- **"Mind Index" Score Logic:** Definition of how this proprietary score is calculated from mental and physical performance data. While the graph is generated, its underlying metric needs a clear content/logic definition.
- **Key Performance Indicators (KPIs):** Identification of specific golf and mental performance metrics that should be displayed as visual trends.

6. Animated GIFs/Video Snippets:

- **Library of Short Visual Aids:** A collection of concise animated GIFs or very short video clips demonstrating specific techniques like breathing exercises, pre-shot routine steps, or physical resets (e.g., a golfer taking a deliberate deep breath, a smooth swing tempo illustration).

7. "Focused Gaze" Exercise:

- **Guidance Prompts:** Text-based prompts for the AI to rephrase that guide the user through the visual practice (e.g., "Find a specific target," "Narrow your vision," "Hold your gaze steadily").

8. Concept Infographics:

- **Infographics Library:** Pre-designed static images or infographics that visually summarize core mental principles and concepts (e.g., "The Circle of Control," "The Process Mindset," "The Iceberg of Performance").

9. VARK-Adapted UI:

- **UI Asset Definitions:** Specifications and potentially visual assets for visual cues (e.g., green checkmarks, red 'X's, specific icons, progress bars) that visually represent logged data and status within the app interface.
- **Color Palette for Status:** Definition of the color scheme for indicating success, challenge, or neutral states related to mental performance.

10. Pre-Shot Visualization Prompts:

- **Core Visualization Scripts:** Foundational scripts or templates for AI to draw upon, guiding users to visually rehearse entire shot sequences (e.g., "See the ball flight," "Imagine the landing zone," "Feel the contact").
- **Dynamic Variable Inputs:** Definition of the variables (e.g., specific hole conditions, target type, desired outcome) that the AI will use to personalize these visualization prompts.
