

FoCoCo AI Authority & Content Governance

Version: 1.0

Prepared by: Dirk J. Delfortrie

Applies to: All AI logic, prompts, modules, and outputs

Audience: Engineering, AI implementation, backend architecture

1. Purpose of This Document

This document defines **who is allowed to decide what** inside FoCoCo's AI system.

It exists to:

- Prevent AI content drift
- Protect FoCoCo's intellectual property
- Ensure long-term consistency, trust, and scalability
- Clarify the boundary between **AI intelligence** and **content authority**

This document is **authoritative** and overrides any ambiguous interpretation of earlier materials where not explicitly defined.

2. Core Principle (Non-Negotiable)

AI in FoCoCo is intelligent, adaptive, and analytical, but it is not an author of new coaching frameworks.

FoCoCo uses a **Data-First, AI-Assisted architecture**.

- **Data defines the system**
- **AI personalizes within the system**

3. Fixed Coaching Spine: MindCoach Templates

FoCoCo's user-facing mental coaching is built on **8 fixed MindCoach templates**.

These templates form the **permanent coaching spine** of the product.

The 8 Locked Templates

1. Pre-Round Clarity
2. Pre-Shot Focus

3. Between-Shots Reset
4. Post-Shot Letting Go
5. Mistake Recovery
6. Pressure Moments
7. Momentum Protection
8. End-of-Round Reflection

These templates:

- Are predefined
- Are versioned (MindCoach_Templates_v1)
- Represent FoCoCo's proprietary coaching structure
- Must not be altered or expanded by AI at runtime

4. What AI Is Allowed to Do

AI may:

1. **Select the appropriate template**
Based on context, timing, user data, and AI module analysis.
2. **Personalize delivery**, including:
 - Tone (calm, directive, reassuring)
 - Length (micro / standard / deep)
 - Language style (VARK-based)
 - Step sequencing
 - Personal references using historical user data
3. **Generate insights and explanations**
 - Inside AI Insight modules
 - Inside End-of-Round Reflection
 - Inside conversational AI (Prime Tier)
4. **Recommend existing tools**
 - Existing cues

- Existing templates
- Existing coaching modules
- Existing routines

5. Learn from feedback

- Improve timing
- Improve clarity
- Improve relevance
- Improve personalization

5. What AI Is Explicitly NOT Allowed to Do

AI must **never**:

- Create new coaching templates
- Create new cues
- Create new routine types
- Create new pillars or frameworks
- Rename or redefine Focus, Confidence, Control
- Introduce medical, therapeutic, diagnostic, or psychological claims
- Invent “modes,” “systems,” or named methods outside the dataset
- Merge templates or bypass template selection
- Promise outcomes or guarantee results

If a user asks for something outside the defined structure, AI must:

- Select the **closest existing template**
- Adapt delivery **without inventing structure**

6. Role of AI Modules (Critical Clarification)

The AI Modules defined in **Blueprint 1.5** (e.g. Post-Round Analyst, Long-Term Trend Advisor, Routine Optimizer) are:

- **Analysis engines**

- **Decision-support systems**
- **Insight generators**

They are **not** user-facing coaching sessions.

Correct Flow:

User Data

AI Module Analysis

Template Selection (from the 8)

AI-Personalized Delivery

Validator Enforcement

AI Modules **inform which template to use**, they do not create new coaching content structures.

7. Validator Enforcement (Mandatory)

All AI outputs related to MindCoach must pass the **MindCoach Runtime Validator**.

Validator enforces:

- Valid template_id
- Allowed routine_type
- Allowed cue
- Allowed delivery_length
- Content guardrails (language, claims, tone)

Invalid outputs must be:

- Corrected automatically **or**
- Re-generated **or**
- Replaced with safe fallback responses

No AI output bypasses validation.

8. Single Source of Truth

The following datasets are authoritative:

- MindCoach_Templates_v1
- Approved cue list
- Approved routine types
- Approved pillars
- Approved AI system prompt
- Validator spec

AI prompts must reference these datasets explicitly.

9. Versioning Rules

- Changes create **new versions** ($v1 \rightarrow v1.1 \rightarrow v2$)
- No silent overwrites
- All AI prompts must reference dataset version
- All sessions must log:
 - template_id
 - validator status
 - AI model version
 - prompt version

10. Why This Matters (Strategic Intent)

This structure ensures:

- Long-term user trust
- Comparable data across years
- Scalable insight intelligence
- Clear legal and ethical boundaries
- A premium, non-chaotic user experience

FoCoCo does not win by doing *more*.

FoCoCo wins by doing the **right things better, longer, and more personally**.
