

FoCoCo – MindCoach AI Specification – v1.1

Version 1.1 correction notice: This document intentionally contains **no executable datasets**. All authoritative data (including *MindCoach_Templates_v1.json*) must remain external and versioned separately. In case of discrepancy, the external dataset always prevails.

Section 1 — AI Authority & Governance

AI in FoCoCo is adaptive and intelligent, but never an author of new coaching frameworks. All coaching output must conform to predefined templates, cues, routines, and validation rules.

Section 2 — MindCoach Templates (Conceptual Overview)

FoCoCo uses 8 fixed MindCoach templates (Pre-Round Clarity, Pre-Shot Focus, Between-Shots Reset, Post-Shot Letting Go, Mistake Recovery, Pressure Moments, Momentum Protection, End-of-Round Reflection). Template definitions and constraints are stored exclusively in *MindCoach_Templates_v1.json*.

Section 3 — AI Runtime & Validator Rules

All AI outputs must return structured JSON, pass runtime validation, respect cue and routine constraints, avoid forbidden language, and log validator status for auditability.

Section 4 — Versioning & Enforcement

Any modification to templates or rules requires a version bump. Silent overwrites are prohibited. This document governs behavior; datasets govern execution.
